society, under the leadership of Miss Clara Barton, and continued as such until reorganized in 1904 and reincorporated by an act of Congress January 5, 1905. It was then transformed into an organization of national scope on an equality with European Red Cross Associations. The Association has affiliations with the government which assures harmony and cooperation between the two. The President of the United States is an honorary member and William H. Taft was, in 1908, its active president. The chairman and five members of the Central Committee are appointed by the President of the United States and represent the Federal departments of State, Treasury, Army, Navy and Justice. There is also a Board of Consultation, consisting of the Surgeon-General of the Army, the Surgeon-General of the Navy, and the Surgeon-General of the Public Health and Marine Hospital Service. Other government officials and ex-officials are also officers of the Red Cross. In the United States there are more than thirty State branches and there are branches also in Porto Rico, Philippines and Hawaii. Since its reincorporation in 1905, the Red Cross has rendered assistance to sufferers from the Philippine typhoon, the Japanese famine, the Vesuvius eruption, the San Francisco earthquake and fire, the Chilean earthquake, the Italian earthquake, the Gulf storm, the Chinese famine, the Russian famine, the Mississippi cyclone and Southern floods, the Monongah mine disaster, Chelsea fire, Michigan forest fires and Canadian forest fires. The officers in 1908 were as follows: President, William H. Taft; treasurer, Beekman Winthrop; counselor, Henry M. Hoyt; secretary, Charles M. McGee; chairman of the Central Committee, Major-General George W. Davis, U. S. A., retired.

REFORMED CHURCH IN AMERICA, (DUTCH). A religious denomination in the United States composed originally of settlers from Holland, but largely intermixed with elements from many other sources. It was known, up to 1867, as the Reformed Protestant Dutch Church in North America. The first church organization was established in 1628. The number of communicants in the church in 1908 was 117,139. There were 683 churches and 727 ministers. In the Sunday schools were enrolled 117,623 scholars. The church is active in foreign missions, sustaining in 1908 108 missionaries. Of these, 26 were in China, 32 in India, 29 in Japan, and 21 in Arabia. During the year 1907-8 405 were added to the 47 mission churches, making the total number of communicants 5,837. The sum of \$132,839 was contributed for domestic missions. Eleven new churches were organized and 6 new missions were begun. The Church Building Fund received contributions amounting to \$8,904. Other funds of the church are the Disabled Ministers' Fund and the Widows' Fund. The denomination supports three theological seminaries, the New Brunswick Seminary, of New Brunswick, N. J.; the Western, of Holland, at Holland, Michigan, and the Arcot Theological Seminary, at Palmener, India. Two colleges, Rutgers College, at New Brunswick, N. J., and Hope College, at Holland, Mich., are under the auspices of the church. The official organs are the *Christian Intelligencer*, published in New York City, and *The Leader*, published at Holland, Mich. There are besides many missionary and departmental publications. The church has a Board of Education, which fur-

nishes aid to educational institutions and young men studying for the ministry. It has also a Board of Publication. The 102nd session of the General Synod of the church was convened at Asbury Park, N. J., on June 3, 1908. The headquarters of the denomination are at 25 East 22nd Street, New York City.

REFORMED CHURCH IN THE UNITED STATES, (GERMAN). A religious denomination, founded by immigrants from the Palatinate, and other districts of Germany. The first church was founded at Germantown, Pa., in 1714. Previous to 1793 the church was under the supervision of the Church in Holland. At that date it became independent. Under the General Synod, established in 1863, there were in 1908, eight distinct synods and fifty-nine classes, corresponding to the Presbyteries in Presbyterian bodies. There were 289,328 communicants, 1,753 congregations and 1,208 ministers and licentiates. In the Sunday schools were 221,784 scholars and 26,090 officers and teachers. During the year there were contributed \$403,924 for benevolent purposes; \$1,771,595 for congregational purposes. Foreign missions are carried on in Japan and China, and home missions are conducted through the Bohemian, Hungarian, German-English, English and Harbor departments. For this work \$240,000 was contributed during the year. The Eastern Theological Seminary was founded in 1825 and is at present located at Lancaster, Pa., under the supervision of the Eastern Pittsburg and Potomac synods of the church. The Western Theological Seminary, founded in 1850, at Tiffin, Ohio, has been removed to Dayton, Ohio, and is under the supervision of the Ohio Synod. It is now known as the Central Theological Seminary of the Reformed Church in the United States. The Mission House for training German ministers is in Sheboygan, Wis. Franklin and Marshall College and Academy, at Lancaster, Pa., is the leading collegiate institution under the auspices of the church. Other colleges are: Heidelberg College, at Tiffin, Ohio, and Ursinus College, at Collegeville, Pa. Colleges for women are maintained at Frederick, Ind., and Allentown, Pa. The Eastern Synod held its 102nd session October 14-19, 1908, at Lock Haven, Pa. Its next annual session will be held October 20, 1909, in the First Reformed Church, at Easton, Pa.

REFORMED CHURCHES, ALLIANCE OF, THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM. An organization which includes Presbyterian and Reformed churches throughout the world, formed in London, England, in 1875. The churches connected with the Alliance number more than 90 and are situated on all five continents. The total number of adherents of the churches throughout the world is about 25,000,000. In the United States the Alliance includes the following churches: Presbyterian Church in the United States of America, 1,300,329; Presbyterian Church in the United States, 268,733; the United Presbyterian Church of North America, 153,956; Reformed Church (Dutch) in America, 117,139; the Christian, Reformed Church in North America, 25,175; Reformed (German) Church in the United States, 248,271; the Reformed Presbyterian Church, Synod, 9,404; the Associate Reformed Synod of the South, 13,368; Reformed Presbyterian Church, General Synod.

3,500; the Welsh Calvinistic Methodist and Presbyterian Church in the United States of America, 14,000; other churches, 1,000; total membership in the United States, 2,154,875. The president of the Alliance is Rev. J. Oswald Dykes, D.D., Principal of the Theological Seminary at Cambridge, England. The American secretary is W. H. Roberts, D.D., LL. D. The first Council of the Alliance was held in Edinburgh, Scotland, in 1877, and the ninth Council will meet in New York City in 1909.

REFORMED EPISCOPAL CHURCH. An Episcopal Church of historic orders, organized in New York December 2, 1873, by members of the Protestant Episcopal Church who were opposed to the growth of sacramentarianism and sacerdotalism in that church, and who made the separation in order that they might continue to worship after the old historic order of the English Reformation and in order to provide a place for any others who might desire to have membership in a church, evangelical in its teaching, liturgical in its worship, episcopal in its government, and dignified and conservative in its methods. The church in 1908 included about 10,000 communicants, 74 churches, and 82 ministers. There were eight bishops in the church, seven of whom presided over synods and missionary jurisdiction in the United States and Canada, and one in British Columbia. The church also has a large following in England. The 28th annual council of the New York and Philadelphia Synod was held in Christ Memorial Church, Philadelphia, October 21 and 22, under the presidency of Bishop William T. Sabine, D.D., of New York. At the same date the annual Council of the Synod of Chicago was held at the Church of the Epiphany, Cleveland, Ohio, under the presidency of the Rt. Rev. Charles Edward Cheney, D.D., S.T.D., Bishop of that Synod. During the year several annual young people's conferences were held. Rev. Professor Robert Livingston Rudolph, A.M., D.D., of New York, Professor of Systematic Theology and Christian Ethics at the Reformed Episcopal Theological Seminary at Philadelphia; was elected to be Bishop Coadjutor of the New York and Philadelphia Synod to assist Bishop William T. Sabine, in place of Assistant Bishop H. S. Hoffman, D.D., of Philadelphia, who resigned his office on account of ill health. The 19th annual Council will be held at St. Paul's Church, Philadelphia, the third Wednesday in May, 1909. The church conducts large missionary work, including between thirty and forty churches among the colored freedmen of the South. Foreign missions are carried on in India. The Theological Seminary of the Church is at Philadelphia. The official organs of the church are *The Episcopal Recorder*, published in Philadelphia, and the *Evangelical Episcopalian*, published in Chicago.

REFORMED PRESBYTERIANS. Several religious bodies of Presbyterian doctrine, founded by members of the Covenanting or Reformed Presbyterian Church of Scotland. They include the Reformed Presbyterian Church in the United States (Synod), with about 9,000 communicants, 109 churches and 113 ministers; the Reformed Church in North America (General Synod) with about 3,500 communicants, 19 churches, and 19 ministers; the Reformed Presbyterian Church (Covenanted) with 4 communicants, one church and one minister, and the Reformed Presby-

terian Church in the United States and Canada, with 436 communicants and one church. The General Synod has a theological seminary at Philadelphia, and the Covenanted body has a seminary at Allegheny City, Pa. The General Synod held its annual meeting at Cincinnati, Ohio, on the fourth Wednesday of May, 1908, and the next session will be held at Philadelphia in the Fifth Reformed Presbyterian Church on the third Wednesday of May, 1909.

REID, Sir ROBERT GILLESPIE. A Newfoundland railway contractor, died on June 3, 1908. He was born at Coupar-Angus, Scotland, in 1840, and in 1865 went to Australia, where he became engaged in gold mining and also did some contracting for public works. In 1871 he went to Newfoundland. He first devoted himself to bridge contracting, his most notable achievements in this line being the International Bridge over the Niagara River, near Buffalo, the railway bridges on the old Montreal, Quebec & Ottawa Railroad, now belonging to the Canadian Pacific system, the Lachine bridge, across the St. Lawrence River, the bridge over the Colorado River at Austin, Tex., several railway bridges on the Southern Pacific Railroad, and the Delaware Water Gap Bridge in Pennsylvania. His first venture in railway building was in 1890, when the government of Newfoundland gave him the contract to build the Hall's Bay Railway. This was completed in 1893, and he then built the Western Railway, running from Hall's Bay to Port-au-Basque, which, after its completion, he also operated. He, subsequently, through agreement with the government, assumed control of the entire Newfoundland railway system, which control, however, he was obliged to relinquish in 1901, because of the opposition the plan had aroused among the electorate, and his holdings were transferred to the Reid Newfoundland Company, of which he was first president. Mr. Reid was knighted in 1907 in recognition of his services to Newfoundland.

RELATIVITY THEORY. See PHYSICS.

RESERVOIRS. See WATER SUPPLY; DAMS; IRRIGATION.

RÉUNION. An island in the Indian Ocean, 400 miles east of Madagascar, a colony of France. Area, 764 square miles; population (1902), 173,315 (13,492 British East Indians, 4,496 Malagasy, 9,457 Africans, 1378 Chinese). The chief towns, with their populations in 1902, are: St. Denis, the capital, 27,392; St. Pierre, 28,885; St. Paul, 19,617; St. Louis, 12,541. The deaths exceed the births. The chief products are sugar (40,000 tons in 1908-9), which makes up 60 per cent. of the exports, rum, tapioca, coffee, vanilla and spices. The imports and exports in 1907 were valued at 14,490,988 and 13,976,891 francs, respectively, the trade with France being represented by 7,746,000 francs of imports and 13,305,000 francs of exports. A railway of 83 miles connects Pointe-des-Galets, the chief port, with St. Benoit and St. Pierre. The island is under a governor, assisted by a privy council and an elective General Council. It is represented in the French Parliament by a Senator and two deputies. The budget for 1907 balanced at 6,522,000 francs. The debt in that year stood at 8,991,000 francs. The French subvention in 1908 amounted to 2,388,480 francs, of which 2,025,000 francs was for the railway and harbor.

REUTERDAHL, HENRY. An American marine painter. He published in *McClure's Magazine* at the time the Atlantic Squadron started on its cruise around the world, a criticism on the construction of the American battleships and navy organization, which attracted wide attention and eventually led to detailed statements from the authorities of the Navy Department. He was born at Malmö, Sweden, on August 12, 1870, and was educated at Stockholm. He developed talent as an artist and came to the United States in 1893 as artist correspondent for a Swedish paper. Since then he has been connected with various illustrated papers in Chicago and New York, and was naval artist and correspondent during the Spanish-American war. He has written extensively on naval subjects.

RHODE ISLAND. One of the North Atlantic States of the United States. Its area is 1,248 square miles. The population, according to Federal estimate made in 1908, was 510,997.

MINERAL RESOURCES. The mineral production of the State is very limited. There was produced in 1907 granite to the value of \$674,898, as against a value for the production in 1906 of \$623,400. There were produced 245,307 gallons of mineral water to the value of \$17,108, as against 220,770 gallons in 1906, valued at \$16,161. Among other mineral products produced in small quantities are coal products, graphite and talc. According to figures of the United States Geological Survey, from whose reports the statistics given above are taken, the value of the total mineral production of the State in 1907 was \$937,384, as compared with a value in 1906 of \$1,715,609.

AGRICULTURAL AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1908, according to figures of the United States Department of Agriculture, were as follows: Corn, 423,000 bushels, valued at \$385,000 from 10,000 acres; oats, 62,000 bushels, valued at \$40,000 from 2,000 acres; potatoes, 900,000 bushels, valued at \$774,000 from 6,000 acres; hay, 90,000 tons, valued at \$1,552,000 from 60,000 acres. The numbers of farm animals in the State on January 1, 1909, were as follows: Horses, 14,000; dairy cows, 26,000; other cattle, 10,000; sheep, 9,000; swine, 13,000.

MANUFACTURES. A comparison of the census of 1905 with that of 1900, on the basis of establishments classed as factories, shows an increase in capital from \$176,901,600 to \$215,901,300, of wage-earners from 88,197 to 97,318, and of value of products from \$165,550,382 to \$202,109,583. Of the wage-earners in 1905, 30,742 were women and 5,230 were children under 16. Textile industries were credited with a value of products of \$103,096,300 in 1905, or 32.8 per cent. more than in 1900. The values of products of the various branches were: Worsteds, \$44,477,600; cotton goods, \$30,628,800; dyeing and finishing, \$9,981,400; woolen goods, \$8,163,167; cotton small wares, \$3,944,600; hosiery and knit goods, \$3,344,600; and silk and silk goods, \$2,555,900. Every branch showed a considerable increase over 1900 values, the percentages of increase for the first four noted being, respectively, 36, 25, 17.8, and 56.5. The values for other leading industries and (in parentheses) the percentages of increase over 1900 were: Foundry and machine shop prod-

ucts, \$16,338,500 (23); jewelry, \$14,431,700 (9); electrical apparatus and supplies, \$5,435,400 (6); silversmithing and silverware, \$5,323,000 (25); gold and silver refining, \$4,260,700 (22). Rhode Island ranked first in the manufacture of jewelry in both 1900 and 1905. Until 1901 Rhode Island ranked second in the number of active cotton spindles; in that year it was surpassed by South Carolina, and in 1906 it was similarly surpassed by North Carolina, giving it fourth rank in this industry. The number of spindles in 1908 was 2,388,105. The following values were credited to leading centres: Providence, \$91,980,900; Pawtucket, \$25,846,800; Woonsocket, \$19,260,500, and Warwick, \$7,051,900.

EDUCATION. By a law of 1903, amended in 1904, the district system was replaced by the town system of school administration. It was also provided that two or more towns could unite to employ a superintendent. The State aids supervision by paying \$750 to a town, city or union that pays its superintendent \$1,500 or more. Such supervision applies to schools having 90 per cent. of pupils enrolled. Since 1898 the State has had an exclusive State system of certifying or licensing teachers. In 1903 a law was enacted requiring superintendents to hold certificates of qualification, granted by the State Department of Education. Towns are required to raise for schools by taxation an amount equal to that given by the State. To encourage consolidation and grading of rural schools, special State aid is granted. In 1906 there remained fewer than 200 ungraded schools. As a result of the law granting State aid to towns maintaining approved high schools, or paying the high school tuition of their pupils at some approved high school, about 97 per cent. of the children of the State have the opportunity of free high school education. There has also been much recent progress in the establishment of evening schools, these being easily accessible in 1906 to about 80 per cent. of the population. In 1907 Rhode Island provided for the pensioning of teachers who have taught thirty-five years, the amount of the pension to be one-half of the annual salary of the last five years, but cannot exceed \$500. On July 1, 1908, twenty-one teachers retired, and on September 30 drew their first quarterly pensions, amounting to \$1,792.20. As far as is known, this is the first time in America that a State has paid a teacher's pension under a well ordered system. The State has long pursued a liberal policy in the education of defective classes. In 1907 it established a new school for the feeble-minded. In addition to school education supplied in other States for the blind, it provides instruction for the adult blind at their homes.

CHARITIES AND CORRECTIONS. The Rhode Island State institutions are located at Howard in the town of Cranston. The State Hospital for the Insane is the largest of this group. The daily average in 1908 was 551 men, 473 women; total, 1,024. The cost for maintaining this Institution for 1908 was \$134,528.75. This amount does not include construction. The Sockanosset School for Boys had a daily average of 386 in 1908, and cost for maintenance was \$68,249.84. The Oaklawn School for Girls had a daily average of 42 in 1908, and cost for maintenance was \$6,459.71. The State Prison

had an average of 125 men, 1 woman; total 126. Providence County Jail, located in the wing of the Prison Building, had an average of 380 men, 23 women; total 403. The cost of maintenance of Prison and Jail together was \$79,929.22. The Workhouse and House of Correction had a daily average of 202 men, 58 women; total 260. The State Almshouse had an average of 237 men, 39 boys; 213 women, 26 girls, making a total of 515. The cost for maintaining the Workhouse and Almshouse together was \$82,218.91. Daily average in all the institutions for 1908 was 2,756; total cost, \$371,386.43.

Each of the above named institutions are independent, with separate heads, all are under the control of the Board of State Charities and Corrections.

POLITICS AND GOVERNMENT. The legislative session of 1908 was the longest in the history of the State. It lasted seventy-seven days, the Assembly adjourning on May 26. Among the important measures passed were those restricting banks and trust companies, regulating motor vehicles and limiting the number of retail liquor licenses in cities and towns to one for each 500 inhabitants. On January 21, the Legislature elected G. P. Wetmore United States Senator. Mr. Wetmore's former term expired in 1906, and for a year the State had but one Senator.

CONVENTIONS AND ELECTIONS. The Republican State Convention to select delegates to the National Convention met on March 26. The platform indorsed the Roosevelt administration, the Panama Canal and protection. The convention declined, by a large vote, to instruct the delegates for any candidate. The Democratic State Convention to choose national delegates refused to indorse a candidate for the Presidency. The Democratic State Convention, for the nomination of a State ticket and Congressman, met on October 6. A platform indorsing the national platform and Bryan and Kern was adopted. Olney Arnold, of Providence, was nominated for Governor, Governor James H. Higgins having refused a renomination. The Republican State Convention on October 14 nominated State and Congress candidates. Aram J. Pothier was nominated for Governor. In the election of November 3 the Republicans carried the State by about 19,000 plurality, electing the entire State ticket. The detailed vote for national and State tickets, was as follows: Taft, 43,942; Bryan, 24,706; Debs, 1365; Chafin, 1,016; Hisgen, 1,105; Gilhaus, 183. Pothier, 38,676; Arnold, 31,406.

STATE OFFICERS. Governor, Aram J. Pothier, Rep.; Lieutenant-Governor, Arthur W. Dennis, Rep.; Secretary of State, Charles P. Bennett; Attorney-General, William B. Greenough; Treasurer, Walter A. Read; Adjutant-General, Frederick M. Sacket; Auditor, Charles C. Gray; Commissioner of Public Schools, Walter E. Ranger; Commissioner of Insurance, Charles C. Gray—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, vacancy in office; Associate Justices, Clark H. Johnson, C. Frank Parkhurst, John T. Blodgett, Edward C. Dubois. Clerk of the Court, B. S. Blaisdell—all Republicans.

The State Legislature of 1908 was composed of thirty-one Republicans and six Democrats in the Senate, sixty-four Republicans and six Democrats in the House. The State representation

in Congress will be found in the article UNITED STATES under the section *Congress*.

RHODESIA. A British possession in South Africa, administered by the British South Africa Company. It is divided by the Zambesi River into northern and southern Rhodesia.

NORTHERN RHODESIA is divided into north-eastern Rhodesia and northwestern Rhodesia. The former has an area of 106,000 square miles and 346,000 inhabitants. The seat of the administrator—in 1908, L. A. Wallace—is Fort Jameson. Northwestern Rhodesia, or Barotse-land, has an area of 182,000 square miles and 500,000 inhabitants. The seat of the administrator—in 1908, R. Codrington—is Livingston, on the Zambesi. There is an abundance of timber, indigenous rubber, cattle, agricultural produce, and minerals, particularly zinc and copper. The imports of northwestern Rhodesia in 1906 amounted to £187,565, and the exports, £105,610 (zinc ore, £80,773). The natives are under the immediate rule of their chiefs.

SOUTHERN RHODESIA has an area of 143,830 square miles and a population of 677,700 (662,800 native, 14,007 whites, and the rest colonial natives and Asiatics) at the end of 1907. Salisbury is the capital of the colony and chief town of the province of Mashonaland. Bulawayo is the chief town of the province of Matabeleland. Owing to its altitude the country is fitted for European settlement. European cereals, vegetables and fruit trees thrive on the highlands; tobacco, rubber and cotton in the lowlands. The output of minerals for the year ended March 31, 1908, was as follows: Gold, 624,813 ounces, valued at £2,336,103; silver, 165,479 ounces, valued at £18,560; lead, 782 short tons, £12,250; copper, 71 short tons, £5,356; chrome iron, 9,938 tons, £28,289; tungsten ores, 51 tons, £5,559; coal, 721,730 tons, £54,897; antimony, 14 tons, £275. Southern Rhodesia is included in the South African Customs Union (see British South Africa). In 1906 the imports amounted to £1,340,687; the exports, £2,110,602, nearly all minerals. There are 1,937 miles of railway, forming a part of the planned Cape to Cairo railway, and 4,300 miles of telegraph line. The revenue in 1907 was £544,937; the expenditures, £501,473. The administrator in 1908 was Sir W. H. Milton.

Toward the end of June the Council passed an Asiatic Registration bill aiming at British Indians and nearly identical with the Transvaal (q. v.) act. Much the same difficulty had arisen as in the Transvaal and the passage of the act was followed by similar consequences. The Indians protested and asked the protection of the British government.

RICE. The culture of this crop was carried on in 1908 in nine States. The area devoted to the crop was 655,000 acres and the total production was 21,889,620 bushels of rough rice. The average yield per acre was 33.4 bushels, the average price per bushel on December 1, 81.2 cents, and the total value of the crop on this basis \$17,771,281. In total yield and total value of crop 1908 ranked first, the yield being by more than 3,000,000 bushels greater than the year before and the total value by more than \$1,500,000 greater than in 1907. Louisiana produced in 1908 11,500,000 bushels, and Texas 9,142,500 bushels, making 20,692,500 bushels for these two States. This was about

95 per cent. of our total production. South Carolina had a crop of 480,000 bushels and Arkansas of 467,400 bushels. The world's rice crop in 1906 amounted to 106,943,900,000 pounds, of which Asia furnished practically 105,000,000,000 pounds. British India grows annually from 6 to 70 billion pounds, China from 50 to 60 billion pounds, Japan about 15 billion pounds, and Korea about 3 billion pounds. The Italian crop for 1908 was estimated at 25,000,000 bushels, which was a little under the average. The Texas-Louisiana Rice Farmers' Association was organized for marketing the product and controlling the price. It was decided to hold Japan rice until February 4, 1909, at \$3.25 a barrel.

RICHARD, FRANÇOIS MARIE, BENJAMIN, CARDINAL. A French cardinal, and archbishop of Paris, died in that city on Jan. 28, 1908. He was born in Nantes, on Mar. 1, 1819, of the noble Vendéen family, the Richards de Lavergne, and passed his youth in the château of Lavergne, near Nantes. He was educated at the Seminary of Saint Sulpice, was ordained in 1844, was vicar-general of Nantes in 1850-70, was consecrated bishop of Belley in 1872, became coadjutor bishop of Paris in 1875, and archbishop of Paris in 1886. In May, 1889, he received his cardinal's hat from Pope Leo XIII. He opposed military service by seminarists, and the church separation movement, but he was one of the prelates who favored the establishment of a form of public worship associations which should represent a combination of the canonical system and the legal requirements. The purity and benignancy of his character, and his activity in parish work, greatly endeared him to the religious people of Paris, and when he was required, under the terms of the Church and State Separation law, to leave the archiepiscopal palace, in Dec., 1906, a crowd of several thousand persons gathered in front of that edifice, knelt in the street and chanted hymns, and altogether made a remarkable demonstration of their love for the aged prelate, and their veneration for his office. Theologically, Cardinal Richard was rigidly orthodox. He set his face sternly against the Modernist movement and its adherents, such as the Abbé Loisy, whom he forced to resign his professorship in the Sorbonne. His few publications, such as his *Meditations* and his *Lives of the Saints of Nantes*, are interesting chiefly for their finished and graceful style, and as reflections of their author's asceticism.

RIMSKY-KORSAKOFF, NICOLAS ANDREJEVITCH. A Russian composer, an important member of the post-Wagnerian school, died on June 20, 1908. He was born at Tikhvin, Novgorod, on March 18, 1844. In 1856 he settled in St. Petersburg, where his first opera, *Psokovitchauka*, was produced in 1873. The most important of many subsequent operas are: *A May Night* (1880); *Snow White* (1880); *Mrada* (1892); *Christmas Eve* (1894); and *Kites* (1905). His instrumental works include three symphonies, a symphonic poem, *Sadko*, a piano concerto, and numerous smaller pieces for orchestra and for piano. He also wrote an excellent theoretical treatise on harmony. His operas are little known outside of Russia, but his instrumental compositions are universally popular.

RINDFLEISCH, GEORG EDUARD VON. A German pathologist, died on December 5, 1908. He was born in Köthen, on December 15, 1836, and was educated at Heidelberg and Würzburg. In 1856 he became assistant to Virchow in Berlin, and in 1861, Heidenhain's assistant in histology, at Breslau. In 1874 he succeeded Virchow as professor of pathology at Würzburg, where a fine institution was built under his direction. Rindfleisch made a special study of the causes and treatment of pulmonary tuberculosis. He published *Lehrbuch der pathologischen Gewebelehre* (1866-69) and *Elemente der Pathologie* (1883). In 1895 at the Medical Research Congress at Lübeck, he presented a paper on the "principles of life."

RIVER AND HARBOR IMPROVEMENTS. The proposal to construct a deep waterway parallel to the Atlantic Coast, by connecting the sounds, bays and rivers along the shore with canals, and thus enable vessels to take an inside route from Boston to Florida, received some attention during the year 1908. In such a scheme the Cape Cod Canal, which was under active construction, and estimated to cost about \$10,000,000, and the Chesapeake & Delaware Bay Canal, would be important links. The route from Boston would be by way of the Cape Cod Canal, Long Island Sound, East River, New York Bay, Arthur Kills, Raritan River, across forty-four miles of New Jersey by canal to the Delaware River, the Delaware and Chesapeake Bay Canal, Chesapeake Bay to Norfolk, Va., and thence south by means of canals or the deepening of existing inlets and rivers. The improvements of the seventy miles of the St. Lawrence River below Montreal, nearing completion, at the end of 1908, included deepening the channel to 30 feet and widening it to 450 feet on tangents, and 500 to 750 feet on curves. Fifty-six miles were finished so that with the help of the tide for a short stretch, a depth of 30 feet was obtained from Montreal to Quebec. The remaining work was to consist in securing a greater width in Lake St. Peter and the tidal parts of the river, as well as the full depth of 30 feet at low tide. Up to the end of the year 48,037,670 cubic yards had been removed, 17,500,000 cubic yards still remaining to be dredged.

The improvement of the Detroit River to provide for the increase in traffic and size of vessels on the Great Lakes was only part of a larger project in which the United States government had been engaged for several years, looking toward the betterment of the harbors along the shores, and the channels connecting these bodies of water. Operations on the Amherstburg channel are still in progress, though part of that work had reached completion during the year. In 1892 a minimum width of 1,600 feet Lake Erie datum, was proposed, too, for feet. Lake Erie datum, was proposed, too, for this channel, but ten years later the depth was increased to 21 feet referred to the 571 feet Lake Erie datum. In 1907, however, it was decided to construct a more direct route, which should be known as the Livingston channel, to have a depth of 22 feet, referred to the 571 feet datum, and a width of 300 feet at the upper end, and 800 feet from Bar Point to deep water in Lake Erie. When completed in 1911, this is to be used for vessels bound down the lakes,

while the Amherstburg channel is to be used for those bound up.

The prevention of floods at Kansas City, Mo., was provided for by the Kaw Valley Drainage Board, which proposed to remove obstructions in the channel, retard the flood outflow, and build dikes along the banks, besides providing a channel 734 feet wide. The cost of the improvement was estimated at \$375,000. (See DREDGING.)

ROADS. See PAVEMENTS AND ROADS.

ROCHE, JAMES JEFFREY. An American journalist and poet, died on April 3, 1908. He was born in Montmellick, Ireland, on May 31, 1847, and was educated at St. Dunstan's College, on Prince Edward Island. In 1866 he came to Boston, and after a brief business career, joined the editorial staff of the *Boston Pilot*, of which he was editor-in-chief in 1890-1905. He was United States Consul at Genoa in 1904-07, when (April 29) he became consul at Berne, Switzerland. His publications include: *Songs and Satires* (1886); *Life of John Boyle O'Reilly* (1891); *The Story of the Filibusters* (1891); *Ballads of Blue Water* (1895); *Her Majesty the King* (1898); *The V-A-S-E and Other Bric-à-Brac* (1900); and *Bycays of War* (1904).

ROCKWELL, CHARLES HENRY. An American naval officer, died on July 1, 1908. He was born at Chatham, Mass., on April 29, 1840, and entered the navy as an acting volunteer master in 1862. He served throughout the Civil War in the East Gulf Squadron, and at its close was an acting volunteer lieutenant-commander. He also saw service on shore as aide to General Newton in the expedition against St. Mark's in 1865, and received the thanks of that officer for his services at the battles of Newport and Natural Bridge. In 1866 he was commissioned acting master in the navy and advanced through the regular grades until his retirement with the rank of rear admiral in 1902.

ROEHRIG, FREDERICK LOUIS OTTO. An American philologist and educator, died on July 14, 1908. He was born at Halle, Prussia, on June 19, 1819, and studied at the universities of Halle, Leipzig and Paris. He came to the United States in 1853, and was appointed assistant librarian of the Astor Library, New York. He was professor of Sanskrit and modern Oriental languages at Cornell University, 1869-85; became instructor in Sanskrit at the University of Southern California in 1886, and in 1895 was appointed lecturer on Semitic and Oriental philology at Leland Stanford, Jr., University.

ROMAN CATHOLIC CHURCH. The most important events in the history of the Roman Catholic Church in 1908 were the Centenary Celebration of the founding of the three great dioceses (now arch-dioceses) of New York, Philadelphia, and Boston; the celebration of the Pope's Jubilee, the fiftieth anniversary of his ordination; and the Eucharistic Congress which met in London in October. Another event of importance was the great missionary Congress held in Chicago. Several of these events will be found discussed below.

The total membership of the Roman Catholic Church in 1908 was estimated at 160,165,000. Of these there were in France 35,387,000; in Austria-Hungary 31,100,000; in Italy, 39,850,000; in Germany, 17,100,000; in Spain, 16,850,

000; in Russia, 9,600,000, and in the United Kingdom, 6,500,000.

UNITED STATES. The total number of Catholics in the United States was estimated at 13,877,426. The clergy numbered 15,655, of whom 4069 were religious and 11,496 were secular. The hierarchy of the church is composed of one cardinal, 13 archbishops, and 90 bishops. The cardinal presides over the arch-diocese of Baltimore. The other arch-dioceses are Boston, Chicago, Cincinnati, Dubuque, Milwaukee, New Orleans, New York, Oregon City, Philadelphia, St. Louis, St. Paul, San Francisco, and Santa Fe. The number of churches in 1908 was 12,513, of which 8408 were churches with resident priests and 4105 missions with churches. There were 84 seminaries, with 5609 students. Colleges for boys numbered 200 and the academies for girls 697. The number of parish schools was 4443, with 1,136,906 children in attendance. Under the auspices of the church are 272 orphan asylums, with a membership of 42,597. There are 1054 charitable institutions, in which were 1,310,300 persons in 1908.

Beginning April 25th and lasting one week was a great celebration in New York City on the occasion of the 100th anniversary of the ordination of the first Roman Catholic bishop of New York. Eminent prelates and dignitaries of the church were present from all parts of the world. Among these was Cardinal Logue, Primate of all Ireland. The celebration included impressive ceremonies in St. Patrick's Cathedral and other churches of the city and a great street parade on May 2, of 40,000 men and boys, including all the representative semi-military organizations and societies of the church. On July 7, Pope Pius issued a decree removing the United States from the jurisdiction of the propaganda. By the operation of this decree the United States is no longer regarded as one of the missionary countries of the Roman Catholic Church, and will be ruled ecclesiastically, according to the ordinary canon law. In November a great missionary congress was held in Chicago. On the occasion of the celebration of the Pope's Jubilee, Archbishop Farley of New York presented the Pope with \$60,000 as an offering from the Catholics of his arch-diocese.

GREAT BRITAIN. On Sept. 11 the Eucharistic Congress began its session in London. Imposing ceremonies were conducted in Westminster Cathedral, where the congress was received by the Pope's representative. A great procession was planned as a conclusion to the Congress. This was intended to be a demonstration of faith in the Real Presence of the Holy Eucharist. It was designed that the host should be carried in the procession attended by a guard of honor. On the announcement of this intention, protests were received by the government from various Protestant societies against the proposed procession as a violation of the law. The Catholic Emancipation Act of 1829, while it allows Roman Catholics to enter Parliament, provides that "if any Roman Catholic ecclesiastic, or any member of any of the Orders, Communities, or Societies hereinafter mentioned shall, after the commencement of this Act, exercise any of the rites or ceremonies of the Roman Catholic religion, or wear the habits of his Order, save within the usual places of worship of the Roman Catholic religion, or in private houses, such ecclesiastic or

other person shall, being thereof convicted by due course of law, forfeit for every such offence the sum of fifty pounds." A petition to the King was prepared by fifty-one united Protestant societies protesting against the carrying of the Host in the procession. On the morning of Sept. 10, the Archbishop of Westminster, who had the procession in charge, received a private communication to the effect that the Prime Minister desired its abandonment. The Archbishop replied immediately that he could not undertake at that late moment to alter published arrangements unless he was authorized to state that he did so at the request of the Prime Minister. He pointed out in a letter to the Prime Minister that processions of a similar character had taken place all over England for many years past without hindrance of any kind, and he claimed that no disturbance would result in the passing of the procession over the proposed route. Mr. Herbert Gladstone, Home Secretary, wrote to the Archbishop that the proposed ceremonial procession had aroused much feeling and, while he could not think that any reasonable person would or could object to such a procession, organized with due regard to the law and general convenience, he was informed that the procession was to be accompanied by and identified with a ceremonial, which was alleged to be inconsistent with the law. He expressed the hope that great care would be taken to secure conformity with the law of the land. After the exchange of several other communications between the Archbishop and Mr. Asquith, the Prime Minister, and Mr. Gladstone, the Archbishop decided to abandon the ceremonial of which the legality was questioned, provided that he was authorized to state publicly that he did so on the request of the Prime Minister. This Mr. Asquith permitted him to do. Those who took part in the procession marched in ordinary dress, without the insignia of office. The episode aroused a great deal of feeling among both Catholics and Protestants in England, and a very general demand was expressed for the modification of the Act of Parliament.

OTHER COUNTRIES. In France the objection in regard to the separation of Church and State did not take on any violent form. The measure does not seem to have worked with detriment to either Church or State, but rather to have been a benefit to both. For the action of the Pope in regard to Abbé Loisy and other incidents relating to the Church in France in 1908, see FRANCE, under *History*. In Austria-Hungary the question of higher education developed antagonism as the result of the attempt of the Clericals to bring the universities under their own administration, subjecting the liberty of teaching to church control. Riots ensued between the Clerical students and those opposed to Clerical domination of schools, headed by Dr. Wahrmund. There were other disorders in various parts of the country. See AUSTRIA-HUNGARY, *History*.

MODERNISM. There were few developments with regard to the question of Modernism during the year, except a rather general silence on the part of Catholic scholars concerning Biblical and other problems. A period of stagnation has been inaugurated, which will probably last until the end of the present Vatican administration. The chief agitation was

that mentioned above in France, relating to Abbé Loisy, and in this connection it may be mentioned that Abbé Loisy was appointed to the Chair of History and Religion in the University of France. The incidents in Austria mentioned above were also indirectly connected with the subject of Modernism. There was much less writing and discussion concerning the subject than in 1907.

RONTGEN RAYS. See PHYSICS; CANCER.

ROOSA, DANIEL BENNETT ST. JOHN. An American physician and ophthalmologist, died in New York City on March 8, 1908. He was born in Bethel, N. Y., on April 4, 1838, studied at Yale in 1856, and in 1857, under a private tutor (on account of poor health), and then entered the medical department of the University of New York, where he graduated in 1860. In April, 1861, he became assistant house surgeon in the New York Hospital, to which institution he returned after having served for three months in the Civil War as assistant surgeon to the Fifth New York Regiment. He studied in the ophthalmic clinics in Berlin and Vienna in 1863, and in the same year became surgeon to the Twelfth New York Regiment. He was professor of diseases of the eye and ear in the University of New York in 1863-82, and held a similar chair in the University of Vermont in 1875-80. In April, 1883, he founded the New York Post-Graduate Medical School, of which he was president, and also professor of diseases of the eye during the remainder of his life. He was also one of the founders of the Manhattan Eye and Ear Hospital; president of the Medical Society of the State of New York in 1879; of the International Otolological Congress in 1876, and vice-president of the International Congress of Ophthalmology at Edinburgh in 1894. In 1893-94 he was president of the New York Academy of Medicine. Dr. Roosa was active in promoting beneficial medical legislation. His publications include *The Old Hospital* (1886); *Treatise on the Ear* (1891); *Treatise on the Eye* (1894), and *Defective Eyesight* (1899).

ROOSEVELT, THEODORE. Twenty-sixth President of the United States. He was born in New York City on Oct. 27, 1858, graduated at Harvard in 1880, and two years later was elected to the New York Legislature, where he served two terms. He was on a ranch in Medora, N. D., from 1884 to 1886, and upon his return to the East in the latter year was an unsuccessful candidate, on the Republican ticket, for mayor of New York, against Abram S. Hewitt (who was elected) and Henry George. In 1889-95 he was a member of the United States Civil Service Commission, and in the spring of the latter year became president of the New York City Police Board. In 1897 he was appointed assistant secretary of the navy, but resigned that position in April, 1898, and with Leonard Wood organized the First United States Volunteer Cavalry, in which he served during the Spanish-American war as lieutenant-colonel, receiving promotion to the rank of colonel for gallantry in action at Las Guasimas. He was elected Governor of New York in Nov., 1898, and at the Republican National Convention, at Philadelphia, in June, 1900, was nominated for Vice-President, a candidacy which he accepted only with the greatest reluctance. Immediately after the assassination of President McKinley, on Sept. 14, 1901, he succeeded to the Presidency,

THE EUCHARISTIC CONGRESS IN LONDON

THE PAPAL LEGATE, WITH FOUR OTHER DISTINGUISHED CARDINALS AND ARCHBISHOP BOURNE

ARCHBISHOP BOURNE
Archbishop of Westminster

CARDINAL GIBBONS
Archbishop of Baltimore

CARDINAL VANNUTELLI
Papal Legate

CARDINAL LOQUE
Archbishop of Armagh

CARDINAL MERCIER
Archbishop of Malines

CARDINAL FERRARI
Archbishop of Milan

the youngest man who has ever held that office. At the Republican National Convention, in 1904, he received a unanimous nomination for President, and in the ensuing election defeated Alton B. Parker, the Democratic nominee, by a majority of 196 electoral votes. His plurality over Parker was 2,545,000, and his majority over all candidates more than 1,700,000.

So far as the United States is concerned, one of the most important complete achievements of President Roosevelt's administrations was the acquirement by this country of the right to build and own the Panama canal. On Dec. 16, 1901, a new treaty with Great Britain was ratified, which outlined the political policy to be observed in the control of the canal. The Spooner amendment, which provided for a commission of seven members, vested with authority to select a suitable route for the canal, was enacted on June 28, 1902. The Isthmian route was chosen, but Colombia failed to ratify a canal treaty with the United States. A revolution at once began in Panama (Nov., 1903), the United States recognized the independence of that republic, and in May, 1904, the Canal Commission obtained full control of the canal zone. (See PANAMA CANAL.) Another act of very great immediate importance in the domestic affairs of the country was the President's interference (Oct., 1902) in the anthracite coal-miners' strike in Pennsylvania, with the result that the miners returned to work, thereby averting what might have been a disastrous fuel famine; while a commission examined the claims of the mine owners and their employees.

A very impressive act of President Roosevelt was his sudden appearance, in the summer of 1905, as peacemaker between Russia and Japan. Plenipotentiaries of the two nations met at Portsmouth in August of that year, and brought to an end one of the most sanguinary wars of history. For his services on this occasion he was awarded the Nobel peace prize in 1906. Again in Jan., 1903, the President induced Great Britain, Germany and Italy, whose warships were then blockading the ports of Venezuela in an effort to collect certain claims of their citizens, to abandon forcible measures, and to submit their claims to the Hague tribunal. In the same month (Jan., 1903), the troublesome Alaskan boundary dispute was submitted to a joint tribunal of American and English jurists, largely through the President's influence. In Oct., 1904, Secretary Hay, at the President's instance, issued an invitation to the powers to a second peace congress at The Hague, and the Czar's subsequent action in calling the conference (after the peace of Portsmouth) was considered in pursuance of Mr. Roosevelt's initial action. Less definite in its political aspects, but of far reaching importance, was the action at the beginning of the Russo-Japanese war by which the United States sought to enlist European powers in the effort to maintain the "administrative entity" of China, while in 1907 President Roosevelt's administration won the further gratitude of China by voluntarily remitting to that country more than \$10,000,000, representing the undisbursed part of the indemnity fund for damages in the Boxer rebellion. Mention should also be made of the reference to the Hague tribunal, in Sept., 1902, of the Pious Fund case, concerning the distribu-

tion of certain Jesuit funds in the possession of Mexico; of the protocol of 1907, by which the Newfoundland fisheries dispute was referred to the same tribunal, and of the peace conference, between the five Central American republics, held at Washington, in Dec., 1907, at President Roosevelt's suggestion, with the result that a joint arbitral tribunal was formed which promises to lessen the frequency of revolutions and political disorders in that part of the world. Other important foreign relations with which President Roosevelt's administrations have been identified were the Japanese immigration problem on the Pacific coast, which had begun to assume serious phases in 1907; the sending of Secretary Taft to Cuba, in Sept., 1906, the occupation of that island by United States troops in the following month, and the establishment of military rule there under Charles E. Magoon, as provisional governor; the readjustment of trade relations with Germany in 1907-08, and the sending of American delegates to the Algeiras Convention in 1906; while in this connection may also be mentioned the application (from Nov., 1905) of the merit system to the diplomatic and consular service of the United States. The first Philippine Assembly was called to order in 1907 by Secretary Taft.

President Roosevelt's attitude toward corporations and monopolies, many of which he considered to be existing or acting in violation of law and in infringement of the rights of the general public, so that the few were favored at the expense of the masses, aroused widespread and in many quarters hostile comment, especially during 1907 and 1908. In his earnestness to advance civic righteousness and the cause of the people as he saw it, his utterances were believed by many to be lacking in calmness and judicial discrimination and to tend to unsettle conditions in legitimate business. Consequently by some he was held as adding to the general depression due to the universally prevailing financial situation. Under such circumstances it was but natural that Mr. Roosevelt should have as many warm friends as critics, and while it would be too much to say that these could be classified as radicals and conservatives or reactionaries, nevertheless there was evidence of such a tendency. The decision in the Northern Securities case, Mar. 14, 1904, in which the consolidation of competing roads was declared illegal and the enactment of the rate law, June 29, 1906, giving increased power to the Interstate Commerce Commission, had strengthened the position of the President in regard to railroads, which he considered essentially as public highways to be administered in the interest of the people. In a message of Mar. 11, 1908, the President asked Congress to confer upon the government power to supervise all of the operations of interstate commerce enterprises, and incidentally denounced stock-watering, overcapitalization, and gambling and improper speculation in stocks and commodities. From May 13 to May 15, 1908, the conference of governors and other public men, called by the President, to consider the question of conservation of natural resources, was in session at Washington, and was addressed by him on the subject of State and Federal rights (see UNITED STATES; AGRICULTURE). In August, the President appointed a Commission on Country Life, his aim being to improve the condition of farmers. In March,

1907, he appointed the important Inland Waterways Commission (see AGRICULTURE), and in his message of Dec. 8, 1908, to the Sixtieth Congress, he again emphasized the need of forest preservation and urged the passage of the bill creating the White Mountain and Appalachian forest reserves (see FORESTRY). On Dec. 1, 1908, he issued an order applying the civil service rules to all fourth-class postmasters east of the Mississippi and north of the Ohio rivers.

During the summer of 1908 it became known that Mr. Roosevelt had decided to go on a hunting expedition in Africa upon the expiration of his term. The party was to proceed to Mombasa, British East Africa. The natural history materials collected by the expedition were to be turned over to the U. S. National Museum, at Washington.

ROOT, ELIHU. An American statesman, Secretary of State. He was born at Clinton, N. Y., on Feb. 15, 1845, and graduated at Hamilton College in 1864, and at the New York University Law School in 1867. He soon acquired a large law practice. He was one of counsel for William M. Tweed, and was chief counsel for Judge Hilton in the Stewart will case and for Hamilton College in the Fayerweather will case. He was also called upon to act as counsel for various corporations, including the New York Street Railway Company and the Sugar Trust. His first public office was that of United States District Attorney for the Southern District of New York in 1883-85. He was also a member of the Alaskan Boundary Commission in 1903. On Aug. 1, 1899, he was appointed Secretary of War by President McKinley, and he held this position until Jan. 31, 1904, when he resigned, and resumed his law practice in New York City. On July 1, 1905, he became Secretary of State. Mr. Root has shown great ability and energy in his administration of both the War and the State Departments. The former department he reorganized almost completely immediately after the Spanish-American war. He drew up the Platt amendment, outlined the general policy of the United States toward Cuba, and formulated the instructions to the Philippine Commission. As Secretary of State he has negotiated about forty treaties, or conventions, many of them of very great importance. At his instance the American delegates to the Second Hague Conference presented a plan for the formation of an international court of justice to comprise jurists representing the various systems of jurisprudence and the various languages of the civilized world, and the convention for the limitation of force in the collection of contract debts, adopted by this conference, was also of his framing. Upon the failure of the conference to adopt a general arbitration treaty, he at once began to approach the nations which had accepted the principle of compulsory arbitration, with the result that treaties of that character have been adopted, as between the United States and France, England, Norway, Sweden, Holland, Denmark, Spain, Portugal, Switzerland, Italy, and Austria-Hungary; and in November, 1908, a treaty with Japan was concluded whereby both countries agree to submit their international disputes to the Hague tribunal. Secretary Root also concluded with China the first treaty ever negotiated with that country in which the question of extra-territorial rights is not mentioned. He also arranged the confer-

ence of Central American States at Washington in November-December, 1907, at which a court was organized, which was formally opened in June, 1908, and within a month had adjusted a dispute between Honduras and Guatemala and Salvador. While Secretary of State, Mr. Root visited Canada, Mexico, and the leading republics of South America, making speeches to bring those countries into closer relations with the United States. After the election of 1908, Mr. Root was proposed for United States Senator from New York to succeed Thomas C. Platt, whose term expired in March, 1909. The absence of other candidates practically assured Mr. Root's election.

ROSSE, Sir LAWRENCE PARSONS, Fourth Earl of. A British scientist, died on August 29, 1908. He was born on November 17, 1840. Studied under his father, the third Earl of Rosse (who had constructed at his seat, Birr Castle, Kings County, Ireland, the great Rosse reflecting telescope), and under Professor John Purser, of Belfast (who for a time was resident at the Birr Observatory), and then in Trinity College, Dublin. At Birr, Rosse made a remarkable drawing of the great nebula of Orion, considered by some authorities as "probably the most elaborate piece of astronomical portraiture ever completed." He also investigated the radiation of heat by the moon, a subject which was still occupying much of his thought at the time of his last illness. He had been chancellor of the University of Dublin since 1885, had been president of the Royal Dublin Society (1887-92) and president of the Royal Irish Academy (1895-1900).

ROWELL, GEORGE PRESBURY. An American publisher, died on August 28, 1908. He was born at Concord, Vt., on July 4, 1838, and attended Lancaster Academy at Lancaster, N. H. He founded the George P. Rowell & Co. advertising agency in Boston in 1865, and in 1869 established the *American Newspaper Directory* in New York City, which contained the first complete list of newspapers ever published. In 1888 he began the publication of *Printers' Ink*, a weekly periodical.

ROWING. The intercollegiate races were held on the Hudson River, near Poughkeepsie, on June 28. The colleges represented were Cornell, Columbia, Pennsylvania, Syracuse, and Wisconsin. Annapolis and Georgetown did not enter crews, although both took part in the 1907 regatta. The best showing was made by the Syracuse crews, which won both the 'varsity eight-oared and the four-oared races and finished second in the freshman eight-oared race. In the 'varsity eight oars (four miles) there was a bitter struggle between Syracuse and Columbia, the former winning by only half a length. Syracuse's time, 19m. 34 $\frac{1}{2}$ s., is the fastest that has been made since 1903. The time of the other crews was: Columbia, 19:35 $\frac{1}{2}$; Cornell, 19:39; Pennsylvania, 19:52 $\frac{1}{2}$; Wisconsin, 20:43 $\frac{1}{2}$. Syracuse also won the four oars (two miles) in the comparatively slow time of 10m. 52 $\frac{1}{2}$ s. Pennsylvania finished second, but was disqualified for fouling Columbia. Cornell failed to finish. The freshman eight oars was won by Cornell in 9m. 29 $\frac{1}{2}$ s. The remaining crews in order of their finish were: Syracuse, 9:38 $\frac{1}{2}$; Columbia, 9:43; Wisconsin, 9:55 $\frac{1}{2}$; Pennsylvania, 10:42.

In the forty-second annual Harvard-Yale race, held on the Thames, near New London, Conn., on

June 25, Harvard won both the 'varsity eight-oared and the freshman eight-oared races, and Yale won the four-oared race. Harvard's time in the 'varsity eight oar was 24m. 10s., or three minutes slower than Yale's time in the preceding year. Yale covered the course in 27m. 45s., which is the slowest time ever made for the event. This poor showing on the part of Yale was largely due to the collapse of Griswold, the stroke, some distance away from the finish line. Yale's time in the four oars was 10m. 33½s., and Harvard's 10:43½. In the freshman eight oars Harvard's time was 9m. 38s. and Yale's, 9:47½.

Other college races were held during the year as follows: Harvard defeated Annapolis and Cornell in races on the Severn and Charles; Pennsylvania defeated New York University on the Schuylkill; and Annapolis defeated Columbia on the Severn.

The thirty-sixth annual regatta of the National Association of Amateur Oarsmen was held at Springfield, Mass., on Aug. 14 and 15. The principal events and winners were: Senior international fours, Saint Mary's A. A., Halifax, N. S.; senior double sculls, Springfield Boat Club; championship single sculls, F. H. Greer, Boston A. A.; senior pair-oared and four-oared, Vesper Boat Club, Philadelphia; senior eight-oared shells, New York A. C.

The sixty-fifth annual Oxford-Cambridge boat race was won by Cambridge for the third year in succession, the winner's time being 19m. 19s. In the English Henley, Christ Church won the Grand Challenge Cup, and Magdalen College the Steward's Cup. A. G. McCulloch, Oxford, won the diamond sculls. See OLYMPIC GAMES.

RUBBER. The commercial interest in the production of crude rubber in 1908, as usual centred in Brazil, from whose port of Para is exported a large proportion of the raw material for use in the manufacturing industries of Europe and America. This is received from the forests in Brazil and Bolivia, and is then transhipped to Europe and America. The arrivals of rubber at Para from July 1 to Dec. 21, 1908, amounted to 14,355 tons, as against 14,240 tons for the last six months of 1907. In New York there were violent fluctuations in the price of Para rubber during the year, and quotations ranged from 84 and 85 cents for fine old up-river rubber on Jan. 1, 1908, to \$1.24 and \$1.25 on Dec. 30, touching even higher values earlier in the year. Brazil was said to have Para trees capable of yielding 36,000 tons of rubber per annum, and there are now planted about 500,000 acres, capable of yielding from 25,000 to 50,000 tons. The plantation industry, which is carried on by scientific methods and with considerable capital, had reached considerable importance, and was considered likely to increase. At the end of the year considerable interest was being shown in the outcome of certain legislative measures which were deemed of the greatest importance to the rubber trade of the world. The belief was held that under the terms of a law of 1903, permitting the organization of syndicates by agricultural and rural industries, "for the defence of their interest," a syndicate of Brazilian producers and collectors would be formed whereby the rubber industry would be placed more largely in the hands of Brazilians, and thus secure increased government favors. In fact, in 1908 it was proposed definitely to extend the benefits of the act mentioned to the rubber interests, by decreasing to *aviadores* or collectors of rubber, or

to producers of the community, the export duties on fine and medium rubber from 22 to 18 per cent. This proposition of the State Legislature was presented to the Governor of Para for approval, and was protested by American and English houses. The actual production of rubber and its preparation for market have always been in the hands of the Brazilians, while the export trade, which such a proposal would threaten, has been carried on by American and European firms. The protest was made under the Brazilian Constitution, which guarantees to all, foreigners as well as natives, equal rights in trade. The successful carrying out of such a scheme, it was believed, would involve a discrimination of at least 4 per cent. in favor of the Brazilians, in an industry where the trade is worked on a basis of ½ to 1 per cent. It was further feared that the favors to such a syndicate would not be confined to reduced export tax, but would be extended to additional commercial facilities, free admission of materials imported for the construction of improvements, etc. The success of the scheme in Para might lead to its extension to the State of Amazonas, of which Manaus is the capital, with equally serious consequences. Other changes in tax conditions in Brazil, and the proposed port charges at Para attending the development and completion of the new harbor, were matters of some anxiety to those in the rubber business, especially the foreign merchants.

The interest in rubber plantations continued in the East, and the results of the important work that has been undertaken in Ceylon and Malaya for the cultivation of rubber were increasingly apparent. In these two regions, in less than 11 months in 1908, there were produced 3,401,734 pounds of plantation rubber, as compared with 1,935,103 pounds for the corresponding year of 1907, and 908,965 pounds for the preceding year. In Malaya, nearly all within three years, 280 square miles have been planted with rubber trees artificially, and the total number is estimated at the end of 1908 at 97,558,440. This is one species of the tree *Hevea*, which, when mature, yields an average of 2 or 3 pounds of rubber per tree. All the trees tapped in Malaya in 1907 yielded an average of 1 pound 12 ounces; the trees in Perak alone yielded 2 pounds 1 ounce; those in Negri Sembilan 2 pounds 7 ounces. These figures relate to over 1,300,000 trees.

The imports of unmanufactured india rubber into the United States in 1908 amounted to 76,289,474 pounds, valued at \$44,782,526, as against 68,653,291 pounds, valued at \$49,813,361 in 1907. Of this about one-half comes from Berlin. The exports of manufactures of india rubber in 1908 and 1907 were valued at \$6,887,419, and \$8,164,836, respectively.

RUDINI, ANTONIO STARRABA, Marquis di. An Italian statesman, died on August 7, 1908. He was born in Palermo on Apr. 6, 1839, and took part with Garibaldi in the movement which finally freed Naples and Sicily from the rule of the Bourbons. He became Mayor of Palermo in 1866, and distinguished himself during an epidemic of cholera by his courage and resourcefulness. In 1869-70 he was Minister of the Interior, which office he resigned because of a disagreement with his colleagues on matters of policy. For the next twenty years he was in the opposition, disapproving of the Triple Alliance and the economic policies of the various governments during that period. He was

Premier in 1891-92, during which time occurred a tendency towards strained relations with the United States on account of the lynching of seven Italians at New Orleans. During his tenure of that office he was forced to renew the Triple Alliance, the policy of which he had always disliked. He was again premier in 1896-98.

RUM. See LIQUORS, FERMENTED AND DISTILLED.

RUMANIA. A kingdom of the Balkan peninsula. Area, 50,715 square miles. Population (1899), 5,956,960; estimated at the end of 1907, 6,684,265. In 1907 there were 70,263 marriages, 274,487 births (exclusive of 6567 still-births), and 175,794 deaths. The principal cities, with their populations in 1907, are: Bucharest, the capital, 288,565; Jassy, 78,997; Galatz, 65,063; Braila, 59,446; Ploeshti, 47,740; Craiova, 45,772; Botosani, 33,550; Focsany, 34,420; Berlاد, 24,179; Buzeu, 23,402; Turn Severin, 20,479; Tulcea, 20,290.

AGRICULTURE. The distribution of the cultivable land among the various classes of owners was in 1905 as follows:

Size of farms	Pro- priators	Area	Per ct. of area
Hectares	Number	Hectares	
10 and under	1,015,302	3,319,695	41.66
Over 10 and under 50..	36,318	695,953	8.73
Over 50 and under 100..	2,381	165,456	2.08
Over 100	4,471	3,787,192	47.53
Total	1,058,172	7,968,296	100.00

The area and production of the principal crops in 1907 and 1908 were as follows:

Crop	1908		1907	
	Area	Production	Area	Production
	Acres.	Win. bu.	Acres.	Win. bu.
Wheat	4,452,000	54,813,000	4,236,100	42,237,000
Rye	363,400	2,640,000	362,400	2,554,000
Barley	1,532,500	12,873,000	1,259,500	20,062,000
Oats	1,211,600	17,212,000	871,000	17,842,000
Rape seed....	32,200	259,000	41,200	152,000
Flaxseed	44,900	180,000	31,700	159,000
Malze	4,992,300	497,900,000	4,765,600	57,576,000

aPreliminary estimate; subject to revision.

The areas of other important crops in 1908 were: Millet, 132,100 acres; hemp, 12,100; potatoes, 24,400; sugar-beets, 22,300; tobacco, 22,900; plum orchards, 173,600; vineyards, 194,300. The production of wine in 1907 was 25,559,161 gallons. The production in sugar-beets in 1907-8 was 109,156 metric tons; in 1908-9, 162,432 metric tons. In 1907 there were produced 436,056 kilos of silk cocoons by 55,101 cultivators in 21,105 communes. For the feeding of the worms, the leaves from 624,820 mulberry trees were gathered. The severe winter of 1906-7, followed by a dry spring and summer, did great damage to the crops of 1907 in point of quantity, but their quality, particularly of wheat, was satisfactory. In 1908 the production of all the crops, except maize, fell below the average for 1903-7. The probable requirements of maize for home consumption are placed officially at 42,500,000 bushels, leaving a surplus of some 55,500,000 available for exportation. In quality the grain

does not come up to the standard, owing to rains during harvest. The weight of this year's wheat is estimated at 60.8 pounds per (Winchester) bushel; this is under 1907, but above the average for 1903-1907.

From 1904 to 1907 the average yield of the five leading grains—wheat, rye, barley, oats, and maize—was invariably much higher on the large estates. In 1907 the average production of bushels to the acre on large and small farms was as follows:

	Wheat	Rye	Barley	Oats	Maize
Large farms....	10.6	8.5	19.1	24.1	15.2
Small farms....	9.3	6.9	14.9	14.9	11.4

A few instances are recorded of minor crops in which the yield on small farms was superior, the most important being rape seed in 1904-1906, and hemp seed in 1906 and 1907.

MINERALS. The only minerals exploited on a large scale are salt, coal, and petroleum. The output of coal in 1905-6 was 140,671 metric tons. The salt production in 1907 was 124,340 metric tons. The sale of salt is a government monopoly. The output of petroleum in 1907 was about 1,130,000 tons. In order to encourage small distilleries and prevent the Standard Oil Company from absorbing the Rumanian petroleum industry, a royal decree was issued on June 24, 1908, fixing the price of lamp oil for the three following months at 8.70 francs per 100 kilos, and the maximum number of metric tons for domestic use at 42,000, to be supplied proportionally by each refinery. All surplus production over the maximum was to be exported—of course, at world-market prices.

MANUFACTURES. In 1907-8 there were 114 large flour mills (against 101 in 1906-7), and over 100 smaller mills. The production of flour by large mills in 1907-8 was 284,406,493 kilos, against 334,834,630 kilos in 1906-7, the decrease in 1907-8 being due to the poor crops of 1907. There are 7 mills, each of which produces over 10,000,000 kilos of flour annually, the largest of them having produced in 1907-8, 19,725,943 kilos. The large mills are grouped around the four cities of Bucharest, Braila, Jassy, and Craiova. The quantity of flour exported in 1907-8 was 26,417,289 kilos. The production of beet-sugar in 1907-8 was 16,350 metric tons; in 1908-9, 22,600.

COMMERCE AND COMMUNICATIONS. The imports and exports in 1906 amounted to 422,114,125 and 491,360,178 lei respectively (1 lei=franc=19.3 cents). The principal imports were: Metals and metal manufactures, 92,200,000 lei; vegetable textiles, 79,123,000; machines, 38,928,000; wool and woollens, 37,600,000; vehicles, 23,563,000; confectionery, 17,046,000; leather and leather manufactures, 15,978,000. The principal exports in 1906 were: Cereals and flour, 405,411,000 lei; wood and wooden articles, 28,532,000; petroleum, 18,881,000; vegetables and fruits, 17,310,000. The trade with the principal countries of origin and destination was as follows, in lei:

From and to	Imports	Exports
Austria-Hungary	119,388,000	31,878,000
Great Britain	62,681,000	52,553,000
Germany	142,264,000	23,780,000
Belgium	10,732,000	152,495,000
Italy	18,212,000	91,274,000
Netherlands	3,597,000	54,840,000
France	19,413,000	28,175,000

In 1907 the ports were entered by 31,338 vessels of 9,280,073 tons, and cleared by 30,874 vessels of 9,352,881 tons. The merchant marine on Jan. 1, 1908, consisted of 84 steamers of 20,527 tons, and 382 sailing vessels of 115,699 tons. The length of railways on Sept. 1, 1908, was 1,990 miles, the whole of it, a few miles only excepted, belonging to the State. The length of telegraph lines in 1907 was 4,769 miles.

GOVERNMENT AND FINANCE. The form of government is a constitutional monarchy. The present King is Carol I., born Apr. 20, 1839, elected "Domn," or Lord of Rumania, Apr. 20, 1866, and proclaimed King Mar. 26, 1881. The King is childless and the succession has been settled on his brother's son, Prince Wilhelm. The elections to the Senate and Chamber of Deputies are indirect, and the franchise is based on property qualifications. The executive power is exercised through a responsible cabinet. The King has a suspensive veto. In 1906-7 the revenue amounted to 292,356,207 lei, and the expenditure, 239,435,783. The budget for 1908-9 balanced at 411,011,036 lei. The principal estimates of revenue were: Direct taxes, 42,240,000 lei; indirect taxes, 63,360,000; stamps and registration, 21,400,000; State monopolies, 58,350,000; public services, 103,845,000; State domain, 28,579,000. The principal estimates of expenditure were: Public works, 73,918,264 lei; war, 54,174,668; worship and instruction, 38,706,520; finance, 176,845,247. The public debt stood on Apr. 1, 1908, at 1,399,182,230 lei.

ARMY AND NAVY. The military forces were reorganized in 1908 and now consist of the regular army and its reserve, the militia and the territorial army. Military service is universal and compulsory from the completion of the 21st to that of the 40th year, divided as follows: 7 years in the regular army; 5 years in the reserve; 3 years in the militia; and 4 years in the territorial army. Of the 7 years in the regular army, 2 are spent in the ranks and 5 on leave for dismounted troops, and 3 in the ranks and 4 on leave for mounted troops. The annual contingent is about 46,000 men. There are 34 regiments of infantry and 9 battalions of rifles; 17 regiments of cavalry; 12 regiments of field artillery; 2 regiments of fortress artillery; and 2 regiments of engineers. The peace strength in 1908 was 83,902 men of all grades, an increase of 13,284 over the preceding year; the military budget was 54,174,668 francs, an increase of 7,220,499 francs over the preceding year. The strength of the field army with its reserves is about 170,000 men and the available strength in time of war 350,000. The fleet consisted, at the beginning of 1908, of one unprotected small cruiser, 1,320 tons; four gun-boats, 410 tons; and 12 torpedo boats, 490 tons.

RUMELIA, EASTERN. See **BULGARIA**; **BALKAN QUESTION**.

RUSSELL SAGE FOUNDATION. See **CHARITY ORGANIZATION**.

RUSSIA. An empire of eastern Europe and northern Asia. Total area, including inland waters, Finland (q. v.), and other dependencies, 8,747,241 square miles. The total population in 1897 numbered about 130,507,000; in 1908 it was estimated at over 150,000,000. The population of the principal cities, according to the latest censuses or estimates, is as follows: St.

Petersburg, the capital (1905), 1,429,000; Moscow (1907), 1,359,254; Warsaw (1901), 756,426; Odessa (1900), 449,673; Lodz (1900), 351,570; Kiev (1902), 319,000; Riga (1897), 282,230; Kharkov (1897), 173,989; Vilna (1900), 162,633; Kazan (1900), 143,707; Saratov (1897), 137,147; Yekaterinoslav (1900), 135,552; Kishinev (1900), 125,787; Astrakhan (1900), 121,580; Rostov on Don (1897), 119,476; Tula, (1897), 114,733. The proportion of the city population to the total is less than in any other European country. The population of towns of 3,000 inhabitants and over in 1906 was 18,672,600; of villages, 127,746,500. In 1904 there were 6,413,485 births and 3,949,227 deaths, giving a natural increase of 2,464,258. The birth rate per 1000 of population was 47.3; the death rate, 29.1. Both the birth and the death rate are exceptionally high. The number of persons entering the empire in 1906 was 536,107, of whom 202,205 were Russians and 333,902 were foreigners; of those leaving, 596,189 (329,759 Russians and 266,430 foreigners). The emigrants designated as Russians are mostly members of subject nationalities, such as Poles, Jews, Finns, etc.

INTERNAL MIGRATION. The historic, glacier-like movement of the Russians from west to east—from the basin of the Dnieper to the Pacific Ocean—has of late years gained in momentum through the operation of two powerful causes, namely, the construction of new railways, particularly the Trans-Siberian, and the steadily diminishing amount of land at the disposal of the peasantry in European Russia. The hopes which the revolution had held out to the peasants of expropriating the nobles of their estates, have vanished. The government's solution of the problem, consisting in buying up the nobles' lands at high prices and selling them through the Peasants' Bank, does not appeal to the poor peasants. The soldiers returning from the Russo-Japanese war have brought back a knowledge of the natural riches of Siberia. And the government, which formerly hindered rather than favored the emigration of the peasants from European Russia, has now become an active promoter of emigration, first in order to have a population capable of rendering resistance in case of a future invasion; and secondly, in order to forestall the threatening economic conquest of eastern Siberia by the ever-increasing inflow of Chinese and Japanese.

From 1861 to 1892, 550,000 peasants entered Siberia. On Dec. 10, 1892, the Trans-Siberian Railway committee was created to colonize the land opened by that road, and generally to promote the economic development of Siberia. As a result of the labors of this committee, the number of emigrants greatly increased, and their mortality rapidly diminished. The number of emigrants increased to 1,000,000 during the period 1893-1899, and the number who died on the way decreased from 3000 out of 56,000 emigrants in 1894, to 300 out of 220,000 in 1899. In the latter year the emigration to Siberia reached the record figure of 223,209, but after that year the movement slackened, falling in 1905 to 33,062. But in 1906 the number increased to 200,794; in 1907 the number was 619,904, of whom from 80,000 to 90,000 settled in the South Ussuri district of the Maritime

Province; and in the first five months of 1908 the number was over 400,000.

EDUCATION. In 1897 the percentage of illiterates over the country as a whole, exclusive of Finland, was 72. In 1906 there were 90,727 elementary schools, with 204,736 teachers and 5,515,185 pupils. The number of middle schools—gymnasias, progymnasias, *real* schools, normal schools, etc., is over 1400, with about 400,000 pupils, besides special schools under the Ministry of War, with about 20,000 pupils; commercial, trade, and agricultural schools under the Ministries of Finance and Agriculture, with about 32,000 pupils; and priests' seminaries under the Holy Synod, with 20,000 pupils. Higher institutions include 9 universities, with over 20,000 students, 6 medical schools, 4 veterinary, 3 law schools, 10 technical institutes, 2 mining, 4 engineering, 4 agricultural, 1 forest, 1 topographic, 5 philological, 1 archaeological, 6 military schools, etc.

FORESTS. The area under forests in European Russia, including Finland, is about 550,000,000 acres, or 39 per cent. of the total area. The extent of forest in Asiatic Russia is unknown. In 1906 the State forests embraced 286,428,666 acres in European Russia, 13,418,328 acres in the Caucasus, 361,945,497 acres in Asiatic Russia, exclusive of the Amur region, and 288,742,000 acres in the Amur region. The total area of forest land in the Amur and Maritime provinces is estimated at 509,000,000 acres, but it is by no means so densely wooded as the forests of North America. Both hard and soft woods are found in considerable variety. The export of timber and lumber from Russia, exclusive of Finland, in 1906 amounted to 98,248,000 rubles (1 ruble=51.5 cents).

AGRICULTURE. The principal crops of the 72 provinces of European Russia (exclusive of Finland) and Caucasasia in 1907 were as follows, in metric tons: Rye, 20,212,209; wheat, 13,684,837; spelt, 114,350; barley, 7,577,760; buckwheat, 1,003,390; millet, 2,260,800; maize, 1,273,220; peas, 545,000; lentils, 186,260; beans, 68,710. The oats crop fell from 13,416,130 tons in 1906 to 4,881,290 tons in 1907. Potatoes increased from 26,623,550 tons in 1906 to 28,169,370 in 1907.

The preliminary returns of the principal grain crops for 1908 embraced for the first time 73 provinces, the Asiatic province of Uralsk having been added to the number from which returns are collected. They show an increase in the wheat total over 1907 and 1906, though it is still much below the level of 1902-1905. The following table shows the results in detail:

PRINCIPAL GRAIN CROPS OF RUSSIA.

Crop	1908 (preliminary)	1907 (final)	1906 (final)
Wheat, winter.....	<i>Bushels (a)</i> 147,900,000	<i>Bushels (a)</i> 161,918,000	<i>Bushels (a)</i> 238,519,000
Wheat, spring.....	421,300,000	348,774,000	269,873,000
Total wheat.....	569,200,000	510,692,000	508,392,000
Rye, winter.....	768,900,000	787,611,000	650,905,000
Rye, spring.....	14,200,000	20,515,000	15,941,000
Total rye.....	783,100,000	808,126,000	666,846,000
Barley (a).....	377,700,000	353,447,000	312,038,000
Corn (maize).....	61,300,000	50,764,000	70,760,000
Oats.....	942,300,000	907,261,000	713,005,000

a Bushels of weight: Wheat, 60 pounds; rye and corn, 56 pounds; barley, 48 pounds; oats, 32 pounds.

b Apparently not including winter barley, which was separately returned in 1906 as 3,011,000 bushels.

The area under sugar-beets in European Russia in September, 1908, was 498,035 dessiatines (1,389,596 acres), a decrease of 56,885 dessiatines (156,434 acres) from 1907. The yield of beets in 1907 was 8,634,118 tons, and for 1908 it was estimated at 8,684,096 tons (126.8 cwts per acre). Poland contributed over one-eighth of this total. The roots contained in 1908, 17.89 per cent. sugar, against 18.53 per cent. in 1907, which was the best record for Russia. A few years ago 13 per cent. sugar was considered a good return.

The area under hops in 1908 had greatly increased over preceding years, but the hop crop was the smallest in ten years. The yield was 270,000 poods (1 pood=36.112 lbs.), against 350,000 poods in 1907, 300,000 in 1906, 400,000 in 1905, and 280,000 in 1904. The 1908 crop was about 60 per cent. the quantity of the average crop. The quality, however, was good. The wine production of 1907 was about 68,640,000 gallons. Tea is raised in small quantities in the neighborhood of Batum, on the Black Sea.

Tobacco covers about 175,000 acres annually in southern Russia, Caucasasia, and Turkestan. The average annual production is 216,000,000 pounds; in 1906 only 161,460,000 pounds were produced. Of the total crop, about 144,000,000 pounds are of very inferior quality. High-grade Turkish leaf is imported for the superior grades of cigarettes.

A semi-official estimate of the 1908 cotton crop, made in October, gives the total at 11,718,981 poods, or 423,204,280 pounds. The estimate by regions was as follows, in pounds: Fergana, 244,220,430; Bokhara and Khiva, 73,074,233; Transcaspiya, 27,760,715; Syr-Daria, 18,264,297; Samarkand, 18,449,230; Transcaspiya, 41,435,374. Compared with 1907, every region shows an increase ranging from 30 to 75 per cent., except Transcaspiya, which shows a falling off of 10 per cent. Compared with 1906, an average year, the estimated increase is 25,000,000 pounds.

The impoverished condition of the peasants and the decline of agriculture are strikingly exhibited in the decline of the number of live stock. In 72 provinces, including European Russia proper, Poland, 4 provinces of the Caucasus, and 8 provinces in Asia, the number of live stock in the past three years was as follows:

	1905	1906	1907
Horses	29,589,352	28,785,338	28,338,000
Cattle	40,564,360*	43,203,711	42,305,000
Sheep and goats..	64,393,708	61,649,251	58,510,000
Pigs	13,668,300	12,734,261	12,279,000

*1904.

The export of butter in 1907, exclusive of Siberian butter, was 3,395,939 poods, against 2,639,340 poods in 1906. The export of Siberian butter in 1907 was 3,413,640 poods, against 2,897,776 poods in 1906.

MINING AND METALS. Next to the United States, Russia is the greatest producer of petroleum. In 1907 the crude petroleum production was 8,247,795 metric tons, or 61,850,734 barrels of 42 gallons each, representing 23.5 per cent. of the world's production. In 1908 naphtha was discovered in the Oukhta district of the Urals. Russia is the foremost producer of

platinum, the output of which was 142,570 fine ounces in 1907, against 210,318 in 1906. The output of gold in 1907 was 1,282,934 fine ounces; lead (1907), 110 short tons; zinc (1907), 1680 short tons; copper (1907), 33,600,000 pounds, against 23,497,600 in 1906; quicksilver (1906), 210 metric tons. Until lately the most important Russian sulphur beds were in Daghestan, North Caucasia. The beds are extensive and have 20 per cent. of sulphur, while the Sicilian beds contain only from 14 to 17 per cent. of sulphur. Their maximum annual output has been 1500 tons. But recently sulphur beds were discovered in Transcaspiia, which promise to be the second largest in the world. The average of sulphur is 60 per cent., and the ore lies exposed, so that no shafts are necessary. The beds are situated 100 miles from Khiva, on the Amu-Darya, and 170 miles from Askhabad, on the Transcaspiian Railway. The most extensive coal fields are those of South Russia and Poland, followed by those of Siberia, the Urals, Central Russia, and the Caucasus. The coal output of 1907 was about 1,454,500 poods (1 pood = 36.112 lbs.). In 1908 it was reported that great coal deposits estimated to contain 600,000,000 poods were discovered near Cheremkovskoye, on the Trans-Baikal Railway. The Russian production of coal and coke is insufficient for the needs of the country, and great quantities of these have to be imported. The output of pig iron in 1907 was larger than in any preceding year. Excluding the manganese ore exported from Poti, the 1907 output was 262,100,000 poods, against 236,400,000 poods in 1906. The exports of pig iron increased from 1,250,000 poods in 1901 to 33,300,000 in 1906 and 60,500,000 in 1907. The great bulk of these exports goes to Great Britain and Germany. The South Russian metallurgical works received in 1907 some 5,200,000 poods of iron ore more than in 1906, but the stock on hand at the end of 1907 was 31,000,000 poods, against 10,000,000 a year previously. The consumption of iron ore by Polish works decreased by about one-third, and several Polish blast furnaces had been idle. In October, 1908, it was reported that there was finally formed the South Russian metallurgical trust, under the title of the Joint Stock Company of Metallurgical Works. The trust includes nine companies, controlling 83 per cent. of the Southern works and 45 per cent. of the total Russian metallurgical output. In the year 1906-7 the nine constituent companies turned out over 240,182,000 poods of iron and steel products. The stock and bond issue, it was stated, would amount to 170,000,000 rubles.

The discovery of pearl in the rivers of the Kamchatka peninsula was reported in 1908. The work of exploration was being carried on with the aid of American capital.

MANUFACTURES. During the sugar campaign 1907-8 (Sept.-Aug.), there were 278 factories in operation, against 279, in 1906-7. The deliveries of sugar-beets to the factories in 1907-8 amounted to 534,550,460 poods, or 9,621,908 short tons, against 630,562,520 poods, or 11,350,125 short tons, in 1906-7. But the quality of the roots in 1907-8 was so much superior to that of the preceding season that the difference in the yield of sugar was not as great as had been feared. The production of 1907-8 was as follows: Refined white loaf sugar, 6,113,609

poods, or 110,045 short tons; white sugar in crystals, 69,912,891 poods, or 1,258,432 short tons; yellow sugar, 15,907 poods, or 287 short tons; refined treacle, 3,759 poods, or 68 short tons. The corresponding figures for 1906-7 were: Refined loaf sugar, 6,618,197 poods, or 119,127 short tons; white crystal sugar, 71,033,696 poods, or 1,278,606 short tons; refined treacle, 19,403 poods, or 350 short tons. No yellow sugar was mentioned for that period. In terms of raw sugar, the production of 1906-7 was 1,458,823 metric tons; in 1907-8, 1,421,433 tons; and for 1908-9 it was estimated at 1,325,000 tons. The export of sugar for the 1907-8 campaign reached the unprecedented quantity of 17,523,794 poods, or 282,642 metric tons, made up of 56,405 tons refined sugar, 224,713 tons white crystals, and 1524 tons yellow sugar.

By the terms of the international agreements of Aug. 22, 1907, and Dec. 19, 1907, prolonging the international sugar convention for another period of five years, beginning with Sept. 1, 1908, Russia conceded a limitation of its sugar exports in return for the authorization to maintain its interior legislation and its system of indirect premiums. Its quota of exportation for the respective seasons were fixed as follows: 1907-8 and 1908-9, 300,000 tons each; for each succeeding season up to and including 1912-13, 200,000 tons. This limitation of exports does not apply to Finland, Persia, and to the other Asiatic countries directly bordering on Russia.

The amount of sugar to be placed in the home market is fixed annually by ministerial decree. For the 1908-9 season it was fixed at 51,000,000 poods, about 822,600 tons. The inviolable reserve for the same period was fixed at 7,000,000 poods—about 112,900 tons. The Minister of Finance was given the usual authority to draw on the reserve stock should circumstances tend to raise the prices, which are fixed.

About 12 billion cigarettes are made every year, of which three-fourths are of second quality. The production tends to increase, particularly of the latter. About 370,000,000 cigarettes are annually exported.

During the year ending Aug. 31, 1908, there were 7,855,210 spinning spindles, showing a very small increase since 1900. The total consumption of cotton during the year ending Aug. 31, 1908, was 923,118 bales, of which 503,951 bales, weighing 270 to 290 pounds each, were Russian grown cotton, 313,476 bales American, 8765 East Indian, and 46,081 Egyptian. The Moscow district, the centre of the textile industry in Russia proper, did a good textile business in 1907. There was a shortage over a large part of the country, owing to previous strikes and railway dislocation, while Lodz, the Polish textile centre, was not working. Thus the Moscow manufacturers absolutely cleared out all their storehouses, selling at very high prices old stuff that had been on their hands for years. The wages of the textile workers had to be increased, but business was so good that manufacturers could very well afford the advance.

The manufacture of artificial silk is increasing. About 1903 a Belgian company erected a factory for this manufacture. In 1907 a French company started an artificial silk factory in the province of Moscow, and in December, 1908, it was reported that another factory was

to be constructed near Moscow, with a capital of 2,000,000 rubles.

The manufacture of agricultural implements has had an immense increase in recent years, due largely to German and English enterprise. The agricultural implement works in Kharkov, owned by a German company, employ 1200 men. At Berdiansk, on the Sea of Azov, an Englishman has a large establishment for the manufacture of mowers, reapers, and "lobo-graikas," a cheap grade of reapers. In Odessa an establishment, started on a small scale by a German in 1884, is credited with an annual production of 120,000 plows per annum. At Yelisavetgrad an English establishment for the manufacture of high-grade implements employs 1200 men. The number of ships built in 1907 was 13, of 20,700 tons.

FACTORIES AND WORKERS. According to the factory inspectors' report for 1904, published in 1907, there were subject to inspection at the beginning of the year 1904 15,375 establishments with 1,684,334 employees, and at the end of the year 14,700 establishments with 1,663,080 employees. The decrease was mainly due to the closing of 745 establishments with 28,744 employees. The closed establishments were mostly of the smaller type, with an average of 38.6 employees, so that the average number of employees per establishment increased from 109.6 in the beginning of the year to 113.1 at its close.

While the majority of the establishments are of the smaller type, 81.7 per cent. of them containing 100 workingmen or less, and 67.7 per cent. 50 workingmen or less, the majority of the factory employees worked in large establishments, 78.3 per cent. in those employing over 100 workers and 50.3 per cent. in those employing more than 500 workers.

Of the total number of employees at the end of 1904, 1,204,553 were males (72.4 per cent.) and 458,527 females (27.6 per cent.). The number of workers over 17 years of age was 1,486,235 (89.4 per cent.); between 15 and 17 inclusive, 151,958 (9.1 per cent.); and children of between 12 and under 15 years, 24,887 (1.5 per cent.).

According to a statement of the British consul at Moscow, in his report on the economic condition of the country in 1907, the conditions of life for the workmen are worse than they ever were before. The increased cost of living more than offsets the increase in wages.

FOREIGN COMMERCE. The imports and exports of merchandise by great classes in 1906 and 1907 are shown in the following table, in thousands of rubles (add 000):

	1906		1907	
	Imports	Exports	Imports	Exports
Foods	104,487	597,413	118,890	559,745
Raw materials	337,410	343,544	375,776	383,342
Animals	917	27,303	1,054	22,731
Manufactures..	177,099	31,127	200,508	26,196
Totals	619,913	999,387	696,228	992,013

The principal articles of import in 1906 were, in thousands of rubles: Cotton, 78,161; tea (61,351,360 lbs., including 12,437,208 lbs. from Ceylon and 3,419,316 lbs. from India), 77,444; machinery, 59,834; metal manufactures, 43,780; coal, 29,861; rubber, 27,748; wool, 24,556; fish, 23,906; cotton goods, 21,130; fruits, 16,734; raw silk, 15,518; chemicals and drugs, 15,265; wool yarn, 15,125; plants and seeds, 11,791; wine, 10,678; copper, 10,059; woolen goods, 9,854; hides and skins, 8,426. The principal exports in 1906 were, in thousands of rubles: Cereals and flour, 451,259; timber, 98,248; flax, 67,956; eggs, 55,157; butter, 44,812; animals, 28,056; seed-cakes, 25,781; cotton goods, 24,823; petroleum, 24,537; bran, 21,614; hides and skins, 19,758; sugar, 19,510; hemp, 11,718. The trade (exclusive of precious metals) with the principal countries of origin and destination, in 1906 for the whole of Russia, and in 1907 for European Russia only (including the trade of the Caucasus by the Black Sea), was as follows, in thousands of rubles:

	Russia, 1906		European Russia, 1907	
	Imports	Exports	Imports	Exports
Finland	31,983	47,277	29,263	50,269
Denmark	6,437	30,772	5,394	29,916
Sweden	6,547	9,589	11,249	8,287
Norway	5,983	6,344	7,922	7,478
Germany	298,422	284,675	311,397	290,375
Austria-Hungary	21,357	45,045	23,615	42,582
France	28,717	76,506	28,596	73,356
Belgium	7,209	41,330	9,040	37,252
Netherlands	13,233	107,959	11,549	114,329
Great Britain	105,726	225,447	114,284	228,770
Italy	10,895	51,959	13,042	34,455
Rumania	844	17,583	2,059	13,550
Turkey	7,826	15,242	6,468	18,130
Egypt	12,219	2,552	12,240	3,419
Persia	24,503	31,756		
China	97,427	57,530	15,820	630
United States	47,450	5,712	53,291	7,727

Owing to the great indebtedness of Russia to other countries, her exports regularly exceed her imports very considerably. In 1907 the excess of exports was much below the average. The falling off was chiefly in the export of grain, and was due to two years of famine.

THE NOVGOROD FAIR. The commercial importance of the fair held annually at Nizhni-Novgorod from July 28 to Sept. 7, has declined of late owing to the development of means of communication, particularly the construction of the Trans-Siberian. Formerly the goods were taken in bulk to the fair and sold from stock, but now they are largely sold from samples. The amount of business transacted in 1907 was considered satisfactory, notwithstanding the scarcity of cash and the difficulty experienced in arranging credit. The total value of goods sold amounted to \$69,525,000, against \$66,435,000 in 1906. Sales of cotton goods represented nearly one-third of the total value. Wool sold for \$1,347,000; woolen goods, \$4,990,000; raw hides and skins, \$4,450,000; dressed leather, \$1,545,000; horsehair and bristles, \$813,700; furs, \$5,665,000 (out of a total value of \$7,982,500 shipped to the fair); rubber goods and shoes, \$1,133,000; metals, \$2,060,000; tobacco and its manufactures, \$1,545,000; chemicals and drugs, \$2,678,000. The Russian Imperial Bank and seven private banks were operating at the fair. The banking transactions were as follows: Bills of exchange discounted, \$10,836,000; payments received on account of bills of exchange discounted and deposited for collection, \$10,161,000; drafts paid, \$25,951,000; drafts sold, \$38,606,000.

NAVIGATION AND SHIPPING. In 1906 the ports of the empire were entered by 11,560 ships of 11,292,000 tons (1,174,000 Russian), and cleared by 11,685 ships of 11,349,000 tons (1,192,000 Russian). The distribution of the tonnage entered and cleared in 1906 by seas was as follows:

	Tons Entered	Tons Cleared
White Sea	568,000	571,000
Baltic Sea	3,939,000	4,127,000
Black Sea and Azov	5,916,000	5,874,000
Pacific Ocean	869,000	777,000

The merchant marine on Jan. 1, 1908, consisted of 906 steamers, of 440,854 tons, and 2544 sailing vessels, of 260,061 tons, the distribution by seas being as follows:

	Vessels	Tons
White Sea	485	35,394
Baltic Sea	1,004	187,464
Black Sea and Azov	1,129	235,875
Caspian Sea	28	20,623
Pacific Ocean	804	221,559
Total	3,450	700,915

The line from Libau to New York, started in 1907, was given up in 1908, the steamers being used on the line to the Black Sea. The Volunteer Fleet started in 1908 direct steamship communication between Vladivostok and Chinese

and Japanese ports, including Tsuruga, Nagasaki, and Shanghai. Passengers and freight are transported, the latter including chiefly Siberian butter, Russian raw materials, and Chinese tea. Subsidies are paid to steamship companies on the Lena River, Lake Baikal, and the rivers of the Amur basin.

INTERNAL COMMUNICATIONS. On Jan. 1, 1908, the Russian railway system, including 2072 miles in Finland, was made up as follows, in English miles: State lines 23,458; companies' lines, 11,981; local lines, 1447; total in Europe, 36,886; total in Asia, 7560; grand total, 44,446 miles. The Asiatic railways include 1071 miles of the Eastern Chinese Railway, in Chinese territory. In 1907 over 1072 miles of new line were opened, besides 613 miles of second tracks on existing lines. The length of line opened for temporary traffic at the beginning of 1908 was 229 miles; of lines under construction, 1111 miles; of lines for which permission to build was granted, 1321 miles.

In 1908 the Duma voted the money for double-tracking the Trans-Siberian line. Work was to be commenced immediately on the Omsk-Irkutsk section, in western Siberia, which was to be completed by 1911. The plans for improving the line include the reduction of inclines, the lengthening of curves, the reconstruction of the mountainous section between Atchinsk and Irkutsk, the improvement of the ferry service across Lake Baikal and of the line surrounding it, and the raising of the general efficiency of the line. The estimated cost, exclusive of transportation of materials, is 170,753,900 rubles.

Another great undertaking sanctioned by the Duma in 1908 was the construction of a railway, over 1300 miles in length, along the banks of the Amur River. The line will apparently branch off from the Trans-Siberian line at Chita, and will follow the course of the great river, in a vast semicircular sweep, until it unites with the Ussuri Railway at Khabarovsk. A branch line will be built along the Zeya River to Blagovestchensk. The cost of construction alone is estimated at over 220,000,000 rubles—a sum which will probably be exceeded. There are rugged mountains to be traversed, and heavy bridges will have to be built across the Amur, which is liable to floods. The two chief purposes which the line is to serve are, first, to have a line to Vladivostok entirely on Russian soil; and secondly, in the words of Premier Stolypin, to reach the 40,000,000 acres of cornland in the Ussuri district. Work was begun in 1908. (See *History*, below.)

Other plans of State railway construction involve a new line from Tumen to Omsk, in western Siberia, at a cost of 31,000,000 rubles, and a line from Nizhni-Novgorod to Viatka. The latter will form another railway system across the north of European Russia, parallel to the Tula-Penza-Samara-Cheliabinsk line, over which most of the passenger traffic to the Trans-Siberian passes.

In Nov. 1908, it was reported that a new Russian company was being formed under the name of the Southern Siberian Railways Company. The statutes and plans of construction had already been laid before the government. The first road which the company proposed to construct was to be from Omsk southward to Semipalatinsk, on the Irtysh river, via Pavlodar, a distance of 1134 versts (1 verst = 0.663 mile),

Besides this the company proposes to construct in Siberia warehouses, elevators, steamboat landings, and branch lines.

Towards the end of 1908 the Perm-Yekaterinburg railway into the Urals was nearing completion. This railway was expected to do much towards increasing the mining output of the Urals, and many of the mines were being enlarged in anticipation of the increased transportation service.

The Finnish Senate assigned in 1908 the sum of 2,500,000 rubles for connecting the Russian and Finnish railways.

The total length of telegraph lines in 1906 was 150,556 miles, of which the State owned 104,696 miles; the railways, 43,267 miles; and local lines, 2593 miles.

GOVERNMENT. The Emperor still retains the old title of "Autocrat of all the Russias." The imperial decree of Oct. 30, 1905, granting the people the inviolability of the person, freedom of conscience, press, meeting, and association, and promising the establishment of a national assembly, or imperial *Duma*, without which no law shall come into effect, and which shall exercise control over the officials appointed by the Emperor—this decree has in large part now become a dead letter. The constitutional guarantees have disappeared. The *Duma* still exists, but its popular character has been almost entirely done away with, and it exercises no control over the imperial officials. The first *Duma* was elected by universal suffrage, though indirectly. It proved revolutionary in its demands, was dissolved (July 22, 1906), and a new one elected on a more restricted franchise. This was dissolved in its turn (June 16, 1907). The franchise was still further restricted so as to secure a majority for the landowners, and the representation of conquered nationalities or more radical sections of the empire—Poland, the Caucasus, Siberia—was cut down. Originally the peasants returned 2535 electors and the landowners, 1965; under the 1907 law the peasants return 1147 electors, and the landowners, 2644. The manifesto of June, 1907, reduced the number of *Duma* members from 524 to 442. The third *Duma*, in session since Nov. 14, 1907, consists of 403 delegates from European Russia proper, 14 from Poland, 10 from the Caucasus, and 15 from Asiatic Russia. The Council of the Empire, reorganized in 1906, has equal competency with the *Duma*. One-half of its members are appointed by the Emperor, the other half are elected one each by the *zemstvos*, or provincial assemblies, 6 by the Holy Synod, 6 by the universities, 12 by commercial bodies, 18 by the nobility, and 6 by the landed proprietors of Poland. Members of the *Duma* are elected for five years; the elective members of the Council of the Empire, for nine years, one-third retiring every three years. The *Duma* elects its own president and vice-president; those of the Council of the Empire are appointed by the Emperor.

Other governing bodies are the Senate, which, besides its other functions, is the supreme court of the empire. The Holy Synod, controlling the affairs of the dominant Church and also exercising a large control over education, is composed of high church dignitaries, but is presided over by a layman, the Procurator-General, who represents the Emperor. The Council of Ministers was reorganized in 1905 in order to

secure a greater degree of coöperation among the heads of departments. The ministers are responsible only to the Emperor.

Emperor Nicholas II, born May 18 (new style), 1868, ascended the throne on the death of his father, Nov. 1, 1894.

In 1908 the Council of Ministers was composed as follows: Premier and Minister of the Interior, P. A. Stolypin; imperial house and domains, Gen. Baron W. B. Fredericksz; foreign affairs, A. P. Isvolsky; war, Gen. Rödiger; marine, Admiral J. M. Dikov; justice, J. M. Shtcheglovitov; public instruction, A. N. Schwartz; finance, W. N. Kokovtsev; commerce and industry, P. Shipov; communications, Gen. N. K. Schaffhausen-Schönberg-Eck-Schauffuss; agriculture, A. W. Krivoshaïn; department of general control, P. A. Kharitnov; procurator-general of the Holy Synod, P. P. Isvolsky; State Secretary for Finland, Gen. Langhoff.

FINANCE. In 1906 the total revenue amounted to 3,355,780,610 rubles, and the total expenditure, 3,212,697,438 rubles. The budget for 1908 balanced at 2,581,403,168 rubles. The principal estimates of revenue were, in rubles: personal and land taxes, 61,870,259; business licenses, 99,208,000; income tax, 21,745,000; customs, 260,487,200; consumption and excise taxes, 243,482,600; stamps, registration, railway, and other taxes, 123,031,355; spirits monopoly, 704,225,000; post office, 51,445,100; telegraphs, 28,500,000; State domains, 681,261,344 (including railways, 550,000,000; forests, 59,500,000, etc.); loans, 181,476,470. The principal estimates of expenditure were, in rubles: Public debt, 385,965,986; Holy Synod, 29,739,152; imperial household, 16,359,595; war, 425,141,793; navy, 86,901,228; finance, 429,673,782 (including pensions, 77,616,236; whisky monopoly, 214,637,220, etc.); interior, 144,114,624 (including police, 59,290,154; posts and telegraphs, 46,898,506, etc.); commerce and industry, 32,860,099; public instruction, 52,991,818; communications, 540,663,617, including 486,379,803 for railways; land organization and agriculture, 58,457,858; justice, 65,018,176; extraordinary expenditure, 269,152,078 (including liquidation of Russo-Japanese war, 66,282,256; army and navy, 56,199,280; railway construction, 59,979,737, etc.). The public debt on Jan. 1, 1908, stood at 8,710,066,204 rubles. The credit of the Russian government rose in 1908. Thus the 5 per cents., which were quoted in 1907 as low as 80, rose to near par in 1908, closing the year at 97¼.

The proposed budget for 1909 balanced at 2,631,495,495 rubles. The proposed revenue estimates included 152,818,254 rubles out of loans to be contracted. The proposed estimated expenditure for the army was 470,623,239; navy, 88,135,050; public debt, 396,656,121; communications, 569,948,251; finance, 455,962,844; education, 72,357,873; interior, 156,232,301.

ARMY. The Russian army is divided into three parts, known as the army of European Russia, army of the Caucasus, and the Asiatic army, with the periods of service varying but slightly in each and the organization and strength not accurately known to the world at large, but described in general terms as given below:

Military service is universal and compulsory from the 21st to the end of the 43d year, with the periods of service divided as follows: Three years for dismounted and 4 years for mounted

troops in the first line or active army; then 14 years in the reserve with two periods of training of 6 weeks each, and finally 5 years in the territorial army. In the army of the Caucasus the corresponding periods are 3, 15 and 4 years respectively; and in the Asiatic army they are 4, 13 and 5 years respectively. There are numerous exceptions and modifications to these rules which can only be studied in a detailed work on the subject, and the same must be said of the organizations of the different units.

The peace strength of the Russian armies is upwards of 1,200,000 men; the field army is about 1,500,000 men; and the available war strength about 4,000,000 men of all grades and classes. In 1908, Russia reorganized the bureaus of the War Department; introduced certain changes with a view to lessening the weight of the foot soldiers' pack; greatly improved regimental transportation; published new and separate regulations for manœuvres; and enacted a new law requiring all officers enjoying the benefits of the military and cadet schools to serve a certain time with the line before passing to the reserve. The budget for the year 1908 was 477,165,383 rubles; an increase of 93,000,000 rubles over the preceding year. The annual contingent for the year was 472,535 men, of whom 14,000 went to frontier guards, 11,000 to the marine corps, and 16,000 to the Cossacks. Discipline continued good, the army remaining faithful to the Czar, in spite of energetic efforts to bring about the contrary.

NAVY. In 1908, the navy comprised 407 ships of all descriptions, aggregating 602,500 tons, distributed as follows: Baltic Sea, 252 ships of 370,700 tons; Black Sea, 76 ships of 169,600 tons; Pacific Ocean, 73 ships of 59,465 tons; and Caspian Sea, 6 ships of 2735 tons. Excluding, however, all antiquated ships, transports, etc., the effective navy stood at the beginning of 1908 as follows: Ten first-class battleships (6 in Black Sea), 136,050 tons; 3 second-class battleships (2 in Black Sea), 27,100 tons; 2 armored gunboats, 3435 tons; 7 armored cruisers, 73,170 tons; 7 protected large cruisers (2 in Black Sea), 46,500 tons; 1 protected small cruiser, 3150 tons; 6 unprotected small cruisers (all in Black Sea), 8950 tons; 16 gunboats, 10,060 tons; 98 destroyers (14 in Black Sea), 35,711 tons; 94 torpedo-boats (32 in Black Sea), 15,980 tons. Total, 244 ships of 360,106 tons, besides 29 submarines, with crews numbering 60,500. There were also 7 convertible cruisers, ranging from 5400 to 8480 tons. The increase in 1907 was 1681 tons. The ships under construction included 2 battleships, of 34,800 tons, and 2 armored cruisers, of 16,000 tons, besides minor craft.

The Emperor has decreed that, if a fleet is to be built, it must be built in Russia, by Russian workmen, with Russian material. The Ministry had to ask foreign aid in the preparation of plans. There was a deadlock with bidders during the year on account of the severity of Russian conditions. In 1907, Vickers-Maxim, of England, prepared plans for a battleship of 22,000 tons, and 21¼ knots speed; the firm engaged to supervise construction, and to guarantee satisfactory results. But this fell through on account of the decree that the work must be done in Russia, by Russian workmen, with Russian material, especially as the turbines would necessarily have to be imported from

England. English, French, Italian, German, and Russian firms offered bids for the reconstruction of the navy. The Duma refused credits for battleship construction until after the reorganization of the Admiralty, where the bureaucrats, in the proportion of one to six naval officers on the active list, absorb nearly all the money voted.

HISTORY.

THE THIRD DUMA. The Duma reassembled on Jan. 21, 1908. It had first met on Nov. 14, 1907, the elections for it having been held under the new law promulgated on June 16, 1907, in violation of the "fundamental law" of the empire that no new measure could be carried into effect without the consent of Parliament. This electoral law changed completely the conditions of the franchise, cutting down the non-Russian representation, and assuring the absolute preponderance of the great landed proprietors. Representation was accorded to the Russian minorities in foreign communities, and great influence was given to the local administration in elections. The members were reduced in number from 524 to 442. The manifesto promulgating the new law had declared that there was need of a Duma that would put down the revolution and that should be nationalist in spirit and loyal to the government. This apparently was the character of the new body, which differed radically in composition from its two predecessors. Whereas in the first two Dumas the Left had an overwhelming majority and the Extreme Right was scarcely represented, in the third Duma, the Extreme Right, made up of conservative monarchists and "True Russians" or out-and-out reactionaries, was the second powerful party after the Octobrists. The Left, comprising the Constitutional Democrats, the Socialists, the Labor party and the Poles, numbered somewhat over a hundred. An Octobrist, Dr. Khomiakov, was elected president. The Octobrists seemed from the first to hold the balance of power, having their place in the Centre, and by their vote turning the tide in favor of either side. They were a loosely organized group, with their own Right and Left, and having in common only their professed allegiance to the October Manifesto of 1905 (whence their name), which declared for a constitution and a Duma which should "take a constant and active part in the elaboration of the laws." They were in accord with the Right during nearly the first half of the session, not, however, with the extreme reactionary wing which not even the government supported, but with the moderate element in that party. They represented mainly the middle and upper bourgeoisie, while the Extreme Right consisted of the large landed proprietors. The Baltic Germans, from whom for more than a century half the official class has been recruited, voted also with the Centre, and a German, Baron Meyendorff, was elected vice-president. The Octobrist chief was M. Goutchkoff. Other leaders were M. von Anrep, formerly chief officer of public instruction at Kharkov; M. Choubinski, an authority on jurisprudence, and Count Oubaroff, a free-spoken critic of the government; and among the effective speakers on the Left were Professor Milyukov (well known in the United States, which he visited in January), and MM. Rodichev, Maklakoff, Chingarev and Adjenov. The leaders of the Moderate Right were M. Kroupiensi, conservative and cautious in temper, and Count Bobrinski, aggressive and outspoken, the friend of Finland and opposed to the curtailment of

her constitution. Under the new system of elections the Polish representation was reduced from 48 to 17, who had to contend against the strong nationalist spirit of the Duma and its hostility to non-Russian elements. Moreover, a number of representatives of the Russian administration in Polish districts had been returned. Under their leader, M. Dmowski, however, the Poles succeeded in getting the ear of the Duma and forcing it to recognize the existence of a question involving some 12,000,000 Russian subjects, as distinct from the issues of the petty nationalities with which it had at first been classed. There was even apparent in ministerial circles and among Moderates in the Duma an inclination to concede large rights of self-government to Poland, going as far as autonomy under a personal union with Russia. This was to be preceded, however, by the incorporation with Russia, proper of certain portions of Polish territory having a large Russian or Little Russian population. Such provinces were Siedlce and Lublin.

THE POLICY OF THE DUMA. Such was the composition of the Duma. It showed at first a submissive temper and during the early weeks did little but appoint committees. The reactionary spirit of the government was evident and it was necessary to proceed cautiously to avoid a rupture. On Dec. 25, 1907, the signers of the Viborg Manifesto (July 23, 1906), which called on the nation to refuse to pay taxes or recruit the army unless the Duma was assembled, were brought to trial and sentenced to three months' imprisonment and loss of political rights. They began serving their sentences in May. The government had denounced measures which it had itself at first favored. It declared the agrarian movement insurrectionary, and it had done nothing to redeem its pledges of October, 1905. The revolutionary movement had, it declared, prevented the introduction of the contemplated reforms. It was charged that more executions by court martial occurred than ever before, and that this policy continued unabated under Premier Stolypin, that the bureaucratic generals and large landowners had resumed their sway, and that the government would no longer listen to the people on agrarian questions but only to the nobility. In February, 1908, a deputation of over 300 members of the Duma visited the Czar and were received with a speech of high monarchical tone, which stated that they were to elaborate bills for restoring law and order, and that as regarded a measure for improving the land tenure of peasants, no infringement of property rights would be accepted.

The evident policy of the Duma at first was to avoid all subjects which, like the agrarian and local government questions, might lead to a rupture with the government. The measures before it were numerous, but of slight importance. Over 700 bills were submitted by the government, and of these the Duma voted more than a hundred. Much waste of time was caused by submitting these measures separately instead of in groups. Among the more important measures were the voting of the Amur railway project (noted in the following paragraph) and the voting of internal loans and the budget. In December, 1907, M. Guerbel, vice-minister of the interior, had demanded a credit of 12,000,000 rubles for fourteen governments, declaring that more would be needed in the spring. In June, 1908, in the course of a debate, the minister of finance, M. Kokovtzev, said that famine was already cer-

tain in eleven governments and that the crops were more than doubtful in twenty-one. Critics attributed the recurrence of famines nearly every ten years to the bad economic and financial policy of the government, to its encouragement of extensive farming and to the heavy taxes. The policy of railway purchase and of maintaining imperial prestige at the cost of a disastrous war had vastly increased the public debt, which was held chiefly by foreigners. It was complained that the government did nothing to remedy the evil but only to palliate it; that it left the peasant untaught, the better to fleece him (illiteracy ranging from 85 to 95 per cent., even 99 per cent. in some villages); that exports were encouraged and imports discouraged, even including agricultural implements; in short, that it either permitted or caused the conditions that it sought at intervals to alleviate. The budget which was first proposed on Dec. 12, 1907, remained for more than three months in the hands of the Budget Commission, and was then submitted piece by piece, thus preventing much general discussion, but there was some stormy debating of items in the departments of Internal Affairs and Public Instruction, and the army and navy credits provoked such severe criticism as to threaten the existence of the Duma. M. Goutchkov criticised a war ministry at the head of which were irresponsible persons, imperial grand dukes. Much sharper criticism was directed against the naval administration. The need of building up a new fleet to replace the losses incurred in the war with Japan was generally recognized, but it was no less generally admitted that a thorough reorganization in the admiralty was needed before it could be entrusted with the immense sums involved. On Feb. 20, the navy authorities laid before the National Defense Committee of the Duma a comprehensive scheme of ship construction calling for the expenditure of nearly \$1,100,000,000 by the year 1917. An alternative scheme contemplated the expenditure of \$225,000,000. The larger plan, of course, stood no chance of acceptance. The second plan met the same fate. On June 7, the Duma by 194 to 78 votes declined to vote any appropriation for construction purposes. In October, a new budget providing for the expenditure of \$44,000,000 on four battleships and minor units was again rejected. The opposition of the Duma did not, however, restrain the government, for, according to the rule, the frant of the last budget was allowed to stand in case of a disagreement. The construction of the four battleships (20,000 tons each) had been in the meantime voted by the Council of the Empire (early in July). The Foreign Office also came in for a good deal of censure. It was charged that Russian diplomatic representatives abroad were men of inferior talents and superannuated. The Russian minister at Constantinople was 74; Cassini, who, having acquitted himself with little credit at Washington before the outbreak of the Japanese war, had been transferred to Madrid, was 75; the Russian minister at Berlin was 78; the minister at Paris was about the same age. On Mar. 31, M. Isvolsky, Minister of Foreign Affairs, speaking in the Duma promised a thorough reorganization of the diplomatic service. On June 17 the Duma voted disapproval of an issue of an internal loan by the finance minister without its sanction in January. On July 11 the Duma adjourned

for its recess till Oct. 20. Though condemned by many for subservience, several instances of free and fearless criticism could be cited by its defenders. Sir Edward Grey, replying to criticism of King Edward's visit to the Czar, referred to these signs of progress. Three years before there was no representative institution in Russia. Now there was a Duma which, though not elected on a democratic franchise, voted and refused to vote money, criticised the government, and comprised different parties, some of which were radical and opposed to the government.

THE AMUR RAILWAY. In April the Duma passed the bill for the construction of the Amur railway, a great extension of the Siberian system, to follow the river as far as Khabarovsk, there uniting with the Ussuri railway and thus affording rail communication through Russian territory with Vladivostok. The estimates of its cost varied, some being as high as 500,000,000 rubles; its length was placed at 1,300 miles, and it was to be completed within four years. In addition to the obvious advantages urged on its behalf, it was said that the region it traversed was rich in copper, iron and coal, copper being worked already. On the other hand, it was criticised as wasteful expenditure at a time of scarcity. Added to the cost of double tracking the Trans-Siberian line, which was voted in June, it would with the interest on capital, heavy running expenses and cost of administration of the country traversed increase unduly the already heavy burden imposed by the government railway policy. Further objections urged by critics were that the climate was cold, the country ill suited for settlement, and the population sparse; that goods could not be brought from Russia, and that the government was planning to close the eastern ports; that Russian labor could not be employed but only Japanese and Chinese; that an army of 200,000 laborers would be required to complete it; that the Germans would profit as lenders and no one else. The bill passed its second reading in the Duma on April 16 and was subsequently carried by a large majority in the upper house. The government had begun the work before the Duma met, taking advantage of the law permitting it to legislate in case of necessity on condition of laying the measure before the chambers within two months of their next meeting.

FINLAND. On March 31 the Finnish Senate resigned, the Diet having opposed its policy toward Russia, and on April 6 the dissolution of the Diet was ordered by the Czar. The Diet's criticism of the Senate was officially declared to be the occasion of this action. The governor-general charged the Diet with having unwarrantably opposed measures which expressed the sovereign's will. Premier Stolypin explained the government's attitude toward Finland in an address to the Duma on May 18. He alleged repeated infringements of the royal prerogative and the passage of laws and ordinances affecting imperial interests without consulting the imperial authorities. He declared that there was no warrant for this course either in the treaty of cession or in the constitutional charter. He complained of the formation of army organizations, like the Red Guard, and the failure of the Finnish police to put down Russian terrorism. The constitutional privileges of Finland would, he said, be scrupulously observed, but imperial interests demanded the coördination

of the laws of Finland with those of the empire. In June an imperial order was issued declaring that all Finnish questions affecting imperial interests must be submitted henceforth to the imperial ministry for consideration and that their final decision rested with the Russian government; and that the governor-general must in future report all matters requiring the Czar's approval not only to the Finnish secretary of state but to the Russian premier. The results of the elections of July 1 were as follows: Social Democrats, 83; Old Finns, 54; Young Finns, 25; Swedish party, 25; Agrarians, 9; Christian Workmen's Union, 2. The Young Finn who had presided in the previous Diet was reelected president. There was harmony among the parties on the issue of Russian aggression and a strong majority in opposition to submitting measures in advance to the Russian ministry. The president of the Diet, in an address to the governor-general, condemned any measure that was inconsistent with the independent administration of the country as an invasion of her rights. A petition framed on Aug. 19, and signed by the members of all parties except the Socialists, declared the new ordinance giving Russian officials the power to interfere in Finnish affairs a violation of the fundamental principle of the Finnish constitution that the country should be governed solely by native authorities.

SUPPRESSING THE REVOLUTION. Reports as to the severity of the government in crushing out the revolutionary spirit varied greatly. At the close of 1907 a member of the Duma declared that 2,717 persons had been sentenced to death and 1,780 executed. In 1908 it appeared from the press that executions in May ranged from 4 to 15 daily, and during the first three months of the year from 60 to 90 per month. About 200 a day were said to be sentenced to exile. On the other hand, Premier Stolypin's assertions made it appear that comparatively few banishments and executions were taking place. The number that had been exiled by administrative process was placed by him at 14,000, which was declared by some to be an underestimate and to refer only to one class. In the course of the year the papers were forbidden to publish details of the executions, and it was difficult to obtain correct figures. At the end of the year, however, the following estimates were published: 1,953 persons sentenced to death and 782 executed; maximum for any one month, 268 death sentences in December and 119 executions; 63 newspapers suppressed. The largest number of executions took place in Warsaw (150), Kiev (150), and Ekaterinoslav (100). Statistics of the Police Department laid before a committee of the Duma showed that from Jan. 1, 1905 to Jan. 1, 1909 the military courts handed down 3,319 sentences of death of which 1,425 were executed. In addition the special drumhead courts martial from Aug. 1, 1906 to May 3, 1907, put to death 683 persons. The last figures are 461 below the press estimates. Public opinion was stirred by the arrest at the close of 1907 of the patriot Tchaikovsky, and sympathy was aroused in England and the United States, where he had lived and was well known. The charges were based on acts committed some thirty years before, which were said to be revolutionary, and he was kept in prison without trial. On Oct. 26 he was released on bail of \$25,000, which was raised by friends in the United States and England. For an account of the Jan Pouten and

Rudowitz affairs, see UNITED STATES, *Foreign Relations*. An instance was cited of the extreme severity of the government at Lodz, where the governor-general ordered the police in arresting suspects to kill them outright if there was any danger in arresting them alive, and forbidding the troops to fire warning shots, saying that the number of persons killed or wounded should agree with the number of shots fired. In November martial law still prevailed in Odessa, Poland, the Caucasus and parts of the Baltic provinces. A state of "exceptional protection" was maintained in St. Petersburg, Moscow, and many other cities. The milder form of "reinforced protection" was widespread. On Dec. 26 there was a sharp encounter between the revolutionists and the police in the suburbs of Moscow. The former repulsed both police and troops, and were reduced only by the aid of artillery. The chief of the secret police and a number of the revolutionists were killed.

FOREIGN AFFAIRS. There was much discussion of the attitude of Austria-Hungary toward the Macedonian question and in the matter of the Novi-Bazar railway (see MACEDONIA and AUSTRIA-HUNGARY), and M. Isvolsky twice appeared in the Duma to explain. The second time was on the discussion of the budget for the ministry for foreign affairs, April 17. His appearance by special authority of the Czar was taken as a sign that parliamentary institutions were consolidated, for questions of foreign policy did not concern the Duma but only the crown. The growing friendliness with Great Britain was expressed in the first part of the address, but it concluded with a reference to Germany as the nation with which friendship had never been broken. When Austria-Hungary announced the annexation of Bosnia and Herzegovina in October, M. Isvolsky, who was then in Paris, conferred with the French minister of foreign affairs and then with the British foreign office on the subject of a European conference. He afterward went to Berlin. (See BALKAN QUESTION.) In Russia, on his return (Oct. 28), public opinion had set strongly in favor of the Balkan States against Austrian aggression. The Crown Prince of Serbia and M. Pasitch, who visited Russia at that time, were cordially received (see SERBIA), and later the president of the Duma sent an expression of that body's sympathy and support to the Servian Skupshchina. In November the Russian government declared that in no circumstances would it occupy any Persian territory without the consent of Great Britain (see PERSIA). King Edward visited the Czar (June 9), the first visit of a British sovereign to St. Petersburg, and members of his suite conferred with the premier and minister of foreign affairs on the Macedonian problem and other questions of concern to the two countries. This visit was followed by that of the President of the French Republic on July 27.

OTHER EVENTS. On Feb. 20 General Stoessel was condemned for the surrender of Port Arthur before all the means of defense were exhausted, for not enforcing his authority, and for disciplinary misdemeanor, but on the recommendation of the court the Czar, in view of his heroism, commuted the sentence to ten years' imprisonment in a fortress, with loss of rank and exclusion from military service. General Fock was reprimanded, and Generals Reuss and Smirnoff were acquitted. Army reforms began in Au-

gust; the military departments were placed under the ministry of war, and the Grand Duke Nicholas was relieved of command. At a mission congress of the Orthodox Church, held at Kiev in August, freedom of worship was opposed and the acquisition of land in the western provinces by persons not of the Orthodox faith. The Holy Synod, contrary to the advice of both the procurator and the premier, ordered the faithful to take no part in the celebration of Tolstoi's eightieth birthday on Sept. 10 and issued an address to that effect, to be read in all the churches. In spite of this congratulatory articles appeared in the newspapers and in many quarters high praises were bestowed upon him. The minister of public instruction having forbidden women to attend university lectures, the rector of the University of St. Petersburg resigned in September. Student strikes broke out in the universities of St. Petersburg, Kiev, and Dorpat, and at St. Petersburg some rioting occurred. On June 24 the Senate announced its decision against the retention of Constitutional Democrats in the municipal councils (*zemstvos*) and their future admission to those bodies. The reason was that by subscribing to the Viborg manifesto the Constitutional Democrats were outlawed as a party. In September the Minister of Education ordered that university professors and instructors who were members of the Constitutional Democratic or any other "illegal" party, should be dismissed. The cholera broke out in several parts of the country in July and caused many deaths in St. Petersburg in September, but began to diminish at the end of the month. Between July 21 and Sept. 14, 3,130 deaths were reported, of which about two-fifths had occurred in the week preceding. The prevalence of drunkenness led to active efforts to control the evil. The church issued an abstinence journal and distributed nearly a million pamphlets. The Duma took measures to the same end. A commission to consider the question was in session for several months. After the reassembling of the Duma in October, the council of ministers sanctioned the introduction of a bill amending the regulations for the sale of spirits. A Russo-British chamber of commerce was organized at St. Petersburg in October, with the design of promoting commercial relations between the two countries. On Dec. 5 the Duma passed a bill for a loan of \$275,000,000, of which two-thirds were to apply to the redemption of the Treasury bonds of 1904 and the rest to the budget deficit on account of extraordinary expenditure for 1909. It was understood that the loan would be placed in Western Europe. The important measure pending at the close of the year was the Agrarian bill, of which the Duma passed on Dec. 21 the clause providing for individual ownership of peasant lands. This was in accordance with Premier Stolypin's policy of gradually doing away with the communal system and turning the ex-serfs into individual land owners and taxpayers. The Pan-Russian Woman's Congress opened on Dec. 23.

RUSSIAN ORTHODOX CHURCH. See GREEK CHURCH.

RUTHERFORD, ERNEST. A British physicist, was awarded the Nobel prize for chemistry, in December, 1908. He was born at Nelson, New Zealand, on Aug. 30, 1871, was educated at Nelson, Canterbury and Christ Church College, at the New Zealand University and at Cambridge,

and after serving as Macdonald professor of physics at McGill University, Montreal, in 1898-1907, became Langworthy professor of physics and director of the physical laboratories at the University of Manchester. He delivered the Bakerian lecture before the Royal Society in 1904, received the Rumford medal from that body in 1905 and the Bressa prize from the Turin Academy of Science in 1908. His publications include *Radio-Activity* (1904), *Radio-Active Transformations* (1906) and numerous shorter treatises on that subject and other subjects in physical sciences.

RYE. The rye crop in 1908 was practically the same as in 1907. The bulk of the crop is grown east of the Mississippi River, where it had matured before the summer drouth set in and hence was not injuriously affected as were some of the other cereal crops. The statistics of rye show that the area devoted to the crop in 1908 was 1,948,000 acres and the total production 31,851,000 bushels as compared with 1,926,000 acres and 31,506,000 bushels in 1907. In both years the average yield was 16.4 bushels per acre. The average farm price per bushel on Dec. 1, 1908, was 73.6 cents or $\frac{1}{2}$ of a cent higher than the price the year before, and the total crop value on the farm on that day for the two years was \$23,455,000 and \$21,068,000, respectively. The leading rye producing States in 1908 were the following: Michigan, with 368,000 acres and a crop of 5,704,000 bushels; Pennsylvania, with 343,000 acres and a yield of 5,660,000 bushels; Wisconsin, with 275,000 acres and a yield of 5,225,000 bushels, and New York, with 145,000 acres and a production of 2,392,000 bushels. In addition to these States, only Minnesota, Nebraska, New Jersey, Illinois and Iowa, mentioned in decreasing order of yield, produced over 1,000,000 bushels. In several of the New England and Southern States practically no rye is grown for the grain. The highest average yield in the leading States, 19 bushels per acre, was secured in Wisconsin.

The world's statistics for this crop in 1907 show a total production of 1,545,621,000 bushels, of which 1,479,851,000 were produced in Europe alone. Among the world's rye producing countries European Russia, as usual, ranked first in 1907, with 776,000,000 bushels; Germany second, with 384,150,000 bushels; Austria-Hungary third, with 129,234,000 bushels, and France fourth, with 58,578,000 bushels. The results of experiment station work in the United States show yields of 15 bushels per acre of spring rye and 25 bushels per acre of fall rye in Montana, under dry-farming methods, and yields of 35 to 40 bushels per acre for Monster and Ivanof winter rye in Kansas. Ten years' breeding work in Bohemia indicates that green and brown color in rye grains is readily transmitted and that brown grains yield larger and more productive plants.

SACKVILLE, LIONEL SACKVILLE-WEST, BARON. A British diplomatist, died on Sept. 3, 1908. He was born on July 19, 1827, and in 1847 became an attaché of the legation at Lisbon. He served in subordinate positions at Turin, Madrid, Berlin and Paris until his appointment as minister to Argentina in 1872. He became minister to Spain in 1878, and in 1881 was made minister to the United States. During the Presidential campaign of 1888 he indiscreetly answered a letter purporting to be from an English-born citizen of Califor-

nia asking his advice as to which candidate for the Presidency would best suit English interests. His answer was to the effect that the reelection of Cleveland would be satisfactory to Great Britain. The letter was at once made public and the opposition to Cleveland attempted to make political capital of it. The President immediately demanded his recall and his diplomatic connection with the United States ceased. He was not again employed by his government. He became Baron Sackville on the death of his brother, after his retirement from the diplomatic service.

SAGE FOUNDATION. See CHARITY ORGANIZATION.

SAINT ANDREW, BROTHERHOOD OF. An organization of the Protestant Episcopal Church, established for the spread of religious faith among young men. There were in 1908 some 1,500 active senior and junior chapters, with about 15,000 members. The official organ is *Saint Andrew's Cross*, published at Boston, Mass.

ST. HELENA. A solitary island in the South Atlantic. Area, 47 square miles; population (1907), 3,485. Jamestown, the capital, has 1,439 inhabitants. The population, commerce and shipping are declining. In 1907 the imports amounted to £35,000 (£32,000 from Great Britain), and the exports to £4,704 (£4,598 to Great Britain). The number of ships calling was 57. The revenue in 1907 was £7,207; the expenditure, £8,057. The governor in 1908 was Lieut.-Col. H. L. Galloway.

ST. KITTS, or ST. CHRISTOPHER ISLAND. An island of the West Indies, forming, with the islands of Nevis and Anguilla, a Presidency of the Leeward Islands (q. v.). Total area, 150 square miles; total population (1906), 49,289. The principal exports are sugar, 14,177 tons in 1907, the bulk of it going to Canada; molasses, 2,157 puncheons, over one-half to Canada; and cotton, the production of which in 1907 was 269,109 pounds on St. Kitts, 13,670 pounds on Nevis, and 59,686 pounds on Anguilla, the whole being shipped to Great Britain. In 1907-8 the imports were valued at £180,347, and the exports at £189,903. The revenue and expenditure in 1907-8 were £50,351 and £47,170 respectively, and the public debt stood at £43,646. The administrator in 1908 was T. L. Roxburgh. A hurricane on March 7 and 8, 1908, did much damage to crops and shipping.

ST. LUCIA. One of the Windward Islands (q. v.), a colony of Great Britain. Area, 233 square miles; population (1907), 54,599. Castries, the capital and one of the best ports in the West Indies, has 8,000 inhabitants; Soufrière, 2,300. The principal products are sugar, of which 5,364 tons were exported in 1907; cacao, 1,719,700 pounds exported in 1907; molasses, and some lime, rubber, and cotton. The imports in 1907 amounted to £310,309; the exports, £264,401. The trade is chiefly with Great Britain, the United States, France, and Canada. The revenue in 1907 was £67,351; expenditure, £64,841; and public debt, £153,730. The administrator in 1908 was Ph. C. Cork.

ST. PIERRE AND MIQUELON. A French colony, consisting of the islands of St. Pierre, Ile-aux-Chiens, and Miquelon, off the south coast of Newfoundland. Area, 93 square miles; population (1902), 6,482, but numbering at present about 4,000, a large number having emigrated to Canada. The capital is St. Pierre.

The islands are barren. Cod-fishing, the principal industry, has been disastrously affected by the action of Newfoundland, which cut off the supply of bait. In 1906 there were engaged in deep-sea fishing 105 boats with 1,886 men. In 1907 imports and exports amounted to 5,031,936 and 7,255,930 francs respectively, the trade with France being represented by 2,457,000 and 6,378,000 francs respectively. Since May, 1906, the colony has been under an administrator, assisted by a consultative council. The weight of taxation is excessive, the local budget for 1907 having balanced at 484,805 francs. The French subvention in 1907 was fixed at 225,566 francs. In Nov., 1908, there were disturbances, caused by the suppression by the government of religious instruction in the public schools. The judge who imposed a fine upon recalcitrant school teachers was mobbed, and the demand was raised that allegiance to France be thrown off and annexation to the United States sought. The agitation subsided when it was announced that a new administrator, Pierre Didelot, was appointed on Nov. 20, and that he would sail immediately for St. Pierre with special instructions on the school question.

ST. VINCENT. An island of the West Indies, forming together with the smaller Grenadines a division of the Windward Islands (q. v.). Total area, 140 square miles; total population (1908), 51,779, mostly negroes and mulattoes. Kingston, the capital, had 4,547 inhabitants in 1891. The principal products are sugar, molasses, rum, coffee, cacao, cassava, arrowroot, and spices. Fine sea-island cotton is grown, of which 427,819 pounds were exported in 1907-8. The imports in 1907-8 amounted to £96,554; the exports, £94,265. The revenue and expenditure in the same year were £27,543 and £23,508 respectively. The administrator in 1908 was E. J. Cameron.

SAKHALIN (KARAFUTO). An island off the east coast of Siberia. The southern half of the island, to the south of 50 degrees N., was surrendered by Russia to Japan in 1905. A commission of 800 Russians and 800 Japanese commenced the work of delimitation in June, 1906, and concluded it in the fall of 1907. The boundary is marked by a lane cut through the forest from east to west, 82 miles long and 12 miles wide. The exchange of documents relating to the settlement of boundaries was effected in Vladivostok on April 10, 1908.

NORTHERN or RUSSIAN SAKHALIN has an area of about 16,370 square miles, and about 12,250 inhabitants. The principal settlements are Alexandrovsk, Nikolaievsk, and Dui. Convicts are no longer sent to the island. Almost the entire surface is covered with forests, chiefly coniferous. The rivers have an abundance of fish, the principal food of the natives. Coal of an inferior grade exists in enormous quantities, and some coal mines are worked near Dui, on the west coast. Large naphtha wells were discovered in 1907 on the east coast, one day's march to the north of Nikolaievsk. The oil proved on analysis to be of fine quality. It contains very little paraffin, but also very little benzene, the valuable by-product in petroleum refining. A company of Russians, Germans and Chinese was organized for the exploitation of the wells. Refining was to begin in the spring of 1909. One-third of the employees were to be Russians, and German machinery was to be exclusively used. The ad-

ministration is in the hands of a military governor.

SOUTHERN or JAPANESE SAKHALIN has an area of about 12,489 square miles, and (1907) 20,467 inhabitants. In Feb., 1908, the number of Japanese actually residing on the island was officially given at 30,000. The Russians have mostly emigrated. The principal settlements are Korsakov, Vladimirovka, Manka, and Paroantomali. The fisheries are the most important source of wealth, chiefly herring, salmon and cod. In 1907 there were 3,460 vessels engaged in the fisheries, which yielded a value of \$2,847,000. The forests are extensive. The investigation of 1906-7 showed a total of 12,461,790,000 feet of evergreen and 21,500,000 feet of broadleaf suitable for export. In 1908 the best method of cutting was being investigated. The land survey, in progress since 1905, has now been completed, and 10,913 divisions of 3,000 tsubo (1 tsubo=3,9538 sq. yds.) each were made. Each settler receives 22,500 tsubo, besides advances of seeds and domestic animals. Cereals and tubers thrive well. The crops of 1906-7 were poor, due to bad weather and a late distribution of seed. Since 1906 an experimental station has been established from which seeds and animals are distributed and at which cattle, horses, hogs, sheep, and goats are bred. In 1907 there were 1,292 cattle, 1,492 horses, and 989 hogs. The mineral wealth has not yet been sufficiently investigated, but considerable deposits of petroleum have been found, besides coal, gold dust, and iron sulphate. A light railway of 30 miles connecting Vladimirovka, the seat of government, with Korsakov, was completed in 1906. The budget for 1908-9 was fixed at 1,677,866 yen (1 yen=49.8 cents), about 1,000,000 yen annually being contributed by Japan.

SALTON SEA. See METEOROLOGY.

SALVADOR. A republic of Central America. Area, about 8,170 square miles; population (1906) about 235,000 pure Indians, and the remainder of mixed blood. San Salvador, the capital, had 59,136 inhabitants in 1905. The other larger towns, with their populations in 1901, are: Santa Ana, 48,120; San Miguel, 24,768; Nueva San Salvador, 18,770; San Vicente, 17,832; Sonsonate, 17,016.

EDUCATION. In 1907 there were in the public schools 34,752 pupils, with an average attendance of 24,713. The expenditure for primary instruction in 1908 was 645,766 silver pesos (1 peso=39.3 cents). There are several private schools, some exclusively primary, and others both primary and secondary. There are 22 higher schools, including 3 normal and 3 technical schools, and a national university. The normal schools are situated at San Salvador, Santa Ana and San Miguel. A school of agriculture was opened in 1907 at San Salvador.

PRODUCTION, COMMERCE, ETC. The chief agricultural product is coffee, covering about 125,000 acres. Its production was estimated at 49,530,363 pounds in 1906, against 74,295,544 pounds in 1905. During the fiscal year 1907 the export of coffee amounted to about 57,000,000 pounds, valued at 10,745,173 pesos. The 1907 crop was small, but better prices than usual were obtained. The 1908 crop was expected to reach at least 70,000,000 pounds. Maize and rice also suffered in 1906, owing to storms and floods. Other agricultural products are cacao, sugar cane, tobacco, pineapples, indigo, rubber, and

medicinal plants. Peruvian balsam is produced in a small zone between the ports of La Libertad and Acajutla, and is a characteristic product of the country. Gold and silver are practically the only mineral products, though a little copper is also produced. There are 62 plants for the manufacture of alcohol under government supervision. The increasing importance of the weaving industry is indicated by the increase in the imports of cotton yarn. In 1906 imports were valued at 4,163,689 gold pesos and exports at 6,527,422 gold pesos. The chief imports are cottons, silks, drugs, flour and hardware. The principal exports in 1906 were, in silver pesos: Coffee, 11,626,296; indigo, 413,620; balsam, 181,851; sugar, 340,026; gold, 2,486,512; other minerals, 885,983. According to United States returns, the imports from Salvador during the fiscal year 1907-8 amounted to \$981,751, and the exports to Salvador \$1,357,297. The total length of railway is over 100 miles. In June, 1908, a concession was granted for the construction of a railway from La Union, on the Gulf of Fonseca, to a point on the Guatemalan frontier where it would connect with the recently completed Guatemalan section of the Pan-American line (see GUATEMALA). In 1907 there were 2,350 miles of telegraph wire.

GOVERNMENT, FINANCE, ETC. The President of the republic—in 1908, General Fernando Figueroa—is popularly elected for a term of four years. The unicameral Congress consists of 3 members from each of the 14 departments, elected annually by universal suffrage. The governors of departments are appointed by the President; municipal officers are elective. In 1907 the revenue and expenditure amounted to 7,110,431 and 7,058,705 silver pesos respectively. The internal debt stood on March 31, 1907, at 2,787,383 gold pesos, and 1,259,363 silver pesos, besides treasury notes amounting to 3,397,776 silver pesos. The external debt amounted to £726,429 in 1899, when it was taken over by the Salvador Railway Company, which receives from the government a subsidy of £24,000 annually for 18 years from 1899. In 1908 a 6 per cent. loan of £1,000,000 was obtained from a London company under a special customs security. The proceeds of the loan were 9,000,000 pesos. The army numbers 3,000 men; the militia 18,000. There is no navy.

HISTORY. In a decree issued on Nov. 20, 1907, President Figueroa granted amnesty to all political offenders, suspended martial law, declared the constitution again in force, and promised the people a fair administration of the government. In his message of Feb. 20, 1908, President Figueroa referred to the Amapala conference of Nov. 6, 1907, between the presidents of Salvador, Honduras, and Nicaragua, and to the Central American peace conference held at Washington toward the end of 1907, as having laid the basis for an era of peace and good will among the republics of Central America. In February Congress approved a loan of \$5,000,000 to be raised in England. In March 14, 1908, the representatives of Salvador and the United States signed at San Salvador a convention determining the status of naturalized citizens of either republic who renew their residence in the country of their origin. This convention was ratified by Salvador on July 20, 1908, and was only awaiting the action of the American Congress to become binding. In April,

1908, a commercial treaty was concluded with Germany. The two nations agreed to accord to each other the most favored nation treatment in commercial, maritime, and consular matters. It was, however, stipulated that any favor which Salvador had already granted or might hereafter grant to any or all of the other Central American republics may not be claimed by Germany unless such favor be extended to some other country. The treaty was to become effective upon exchange of ratifications and to remain in force for ten years, unless denounced one year before the expiration of that period. If not so denounced, it shall continue in force thereafter until one year after denouncement. A decree of May 22, 1908, announced the adherence of Salvador to the Universal Postal Union, established at Rome on May 26, 1906. On July 13, 1908, Salvador ratified all the conventions of the third Pan-American Conference, held at Rio de Janeiro. Early in Dec., 1908, the government promptly crushed a revolt which started in the department of Sonsonate.

SALVATION ARMY. A religious body founded on military principles by William Booth in 1878, although as a Christian mission it had existed in London since 1865. The corps and outposts of the army in 1908 numbered 850. The indoor attendance at its meetings is 8,292,060, and the open air attendance 1,493,865. The local officers and bandsmen numbered 5,539. There were 78,768 junior companies, with a company attendance of 1,757,692. The American relief institutions for the poor include 84 industrial homes, to which in 1908 10,330 men were admitted; 75 workmen's hotels with shelter accommodations for 8,086; 42 homes, accommodating 265; 21 slum posts, by which 8,716 sick cases and 33,979 families were visited during year; 24 rescue homes, to which 1,755 persons were admitted; a bureau for missing friends in which 277 persons were found during the year, and three colonies, embracing 2,569 acres of land, in which were 399 persons. The army distributes annually about 300,000 Christmas dinners and about 10,000 Thanksgiving dinners. It afforded temporary relief to persons outside of industrial homes and hotel numbering 29,026 during the year. Outings were given to 6,311 mothers and 25,029 children. Commander Miss Evangeline Booth is in charge of the work in the United States with Colonel William Peart as chief secretary.

SAMOA OR SAMOAN ISLANDS. A group of islands in the Pacific Ocean belonging partly to the United States and partly to Germany. Following a volcanic eruption, which began on the island of Savaii on May 10, a huge stream of lava, spreading almost continuously over a width of eight miles, flowed down to the sea, destroying many native houses in the way. It was the largest flow of lava in the history of the island. See GERMAN SAMOA and TUTUILA.

SAMOS. An island off the west coast of Asia Minor. Area, 181 square miles; population (1902), 53,424, nearly all Greek Christians. About 15,000 natives live on the coast of Asia Minor. Foreigners numbered 1,449, of whom 1,325 were Greek. Vathy, the capital, has 15,000 inhabitants; other towns are Carlovassi, Tigani and Chora. There are about 30 villages, varying in size from 50 to 2,000 inhabitants.

Wine is the chief source of wealth. About 7,420 acres are under vines, the annual output being 1,600,000 gallons. Muscatel grapes are a specialty, and two-thirds of the wine is exported to France and Germany for mixing purposes. The highest grade of cigarette tobacco is grown, the output in 1908 being 846,000 pounds. The annual export of cigarettes is 50,000,000. Cigarette machines recently introduced have thrown a large number out of employment, and many are planning to leave the island. The carob-tree, the fruit of which is used as a fodder as well as for mixing with chewing tobacco, grows wild; the annual export of carob-beans is 3,400,000 pounds. The olive oil production is 420,000 pounds annually, nearly the whole of this being used for food and soap. In 1907 imports amounted to 18,850,600 piasters (1 piaster=4.4 cents), and exports, 18,132,720 (wine 8,900,000; cigarettes 4,300,000). The ports were visited in 1907 by 4,580 vessels of 403,678 tons. The island is a dependency of Turkey, under the protection of Great Britain, France, and Russia. The prince is a Greek Christian appointed by the Sultan. There is an assembly of 40 members elected for two years, and a senate the members of which are elected by the assembly. The revenue and expenditure for 1907 were estimated at 3,479,800 and 3,427,340 piasters respectively. The public debt amounts to 2,570,500 piasters. The annual tribute of 300,000 piasters is relinquished by the Sultan to the island for the construction and repair of roads, of which there is great need.

In May, 1908, there were disturbances at Vathy, due to friction between the Greek nationalists and Prince Kopassi Effendi who refused to summon the assembly and was supported in his course by the Porte. The rising was suppressed and severe sentences were passed on those accused of participating in it. Nineteen of the accused who failed to make an appearance having been condemned to death. During the disturbances, Turkish soldiers did some looting and committed acts of desecration in the Church of St. Charalambé. Acting on the advice of France and Great Britain, the Turkish government gave assurances that it did not intend to modify the status of the island.

SAMUELS, SAMUEL. An American sea captain and yachtsman, died on May 18, 1908. He was born at Philadelphia on March 14, 1823, and when eleven years old ran away from home and shipped as a cook on a coasting schooner. He subsequently visited practically every part of the world in his voyages and had various interesting experiences, many of which are described in his *From the Foremast to the Cabin* and other writings. In 1886, as skipper of the *Dreadnaught*, the best known of American clippers, he made the voyage from Sandy Hook to Queenstown, a distance of nearly 3,000 miles, in the record time of nine days and seventeen hours. He served at various times as captain of the United States steamship *John Rice*, as general superintendent of the quartermaster's department in New York City, as commander of the *McClellan* at the capture of Fort Fisher in 1865, as general superintendent of the Pacific Mail Steamship Company, as organizer of the United States Steam Heating and Power Company, and as president of the Marine Journal Company. In 1866, although he had retired from active sea service, he sailed the yacht *Henrietta*, owned by James Gordon Bennett,

across the Atlantic in thirteen days and twenty-two hours, easily defeating the other yachts in the contest, those of Pierre Lorillard and George Osgood. Afterward he sailed in other yacht races, his last one being a triangular race from Newport to New York over the New York Yacht Club course, which he won with his own yacht, the *Dreadnaught*.

SANITATION. Reorganizations and extensions of State sanitary activities and continued and stronger agitation for a national board of health for the United States were notable features of 1908. The reorganized and enlarged State departments of health of New York and Pennsylvania were very active in their campaigns against stream pollution and for purer water supplies. The reorganized board of health of Virginia promised to set a much-needed example of efficient State health protective work in the South. The old State board of health and State sewerage commission of New Jersey were consolidated in 1908 into a new State board of health, the engineer-member of each of the old bodies being appointed to the new board. This board, like those of Massachusetts, New York, Pennsylvania, Ohio and Kansas, passes on and can refuse to approve plans for sewage disposal. Some of these boards also have power over plans for new public water supplies, and some can demand that sewage from existing sewerage systems shall be purified before it is discharged into any stream or lake. The Ohio legislature in 1908 took the lead of the States of the Union in giving its State board of health supervisory control over water and sewage purification plants. Hereafter, that board can order changes in the methods of operating such plants, in case such changes are deemed necessary to protect the public health. This was a great step forward, for heretofore the few States that have required the approval of plans for water and sewage purification, as a condition precedent to construction, made no provision for insuring that the plans so approved should be followed during construction, much less that the plants when built should be properly operated. The Ohio board also entered upon a study of garbage disposal methods and costs, which was an almost unworked field for such boards.

Further investigations at Washington, D. C., confirm the opinions previously expressed to the effect that other causes than the public water supply were responsible for the excessive amount of typhoid fever which prevailed at Washington for years before and has continued since the building of a water filtration plant for the District of Columbia. In particular there may be mentioned a notable study of typhoid fever at Richmond, Va., with comparisons with Washington and a review of certain conditions effecting typhoid elsewhere in the South. This paper, by Drs. E. C. Levy and A. W. Freeman, of Richmond, Va., was read before the American Public Health Association in 1908, and has been reprinted for private circulation by the authors. The paper showed that the typhoid curves of Richmond and Washington had risen and fallen together for a quarter century past, notwithstanding the fact that the Richmond water supply had been unchanged or changed only for the worse, while that of Washington had been improved. The authors hold, in common with other recent investigations, that the long warm summers of the South favor proso-

demic or residual typhoid—i. e., that due to other causes than water and milk, such as transmission from privies to and through food by flies, transmission by personal contact, etc. A unique study of typhoid fever was made in a half dozen wards of Pittsburgh, Pa., late in 1907 and reported in 1908, under the auspices of *Charities and the Commons*, with the aid of funds from the Sage Foundation. It consisted of a house-to-house canvass of typhoid cases which had been reported to the health department during the first half of 1907. This typhoid survey, as it was aptly called, was both sanitary and economic in character. The city wards studied are occupied by steel and other workers. The economic effect of illness or death from typhoid on the families involved was investigated and reported. Extracts from the report were published in *Engineering News* for March 5, 1908, from which the concluding words are quoted, as follows:

"There were 929 typhoid cases, in 844 families, in the six wards, but when the study was made only 338 of the families, numbering 2,045 individuals, could be found. In these 338 families there were, during the year ending June 30, 1907, 448 cases of typhoid, with 26 deaths. Nearly half the cases (or 202) were children, of whom 164 were in school. The aggregate actual money loss caused by the 448 typhoid cases investigated was \$57,253, or about \$130 per case. It will be noted that these figures make no allowance whatever for the economic loss to the community caused by the 26 deaths. We may add, that on the same basis of average cost, the 5,637 cases of typhoid fever in Pittsburgh (including Allegheny) during the year involved was about \$725,000."

Since the date covered by the typhoid survey a modern water purification plant has been put in operation in Pittsburgh and typhoid fever has materially decreased. For further information on sanitation see GARBAGE, SEWAGE PURIFICATION, STREET CLEANING, and WATER PURIFICATION.

SANKEY, IRA DAVID. An American evangelist and hymn-writer, died on Aug. 13, 1908. He was born in Edinburgh, Pa., on Aug. 28, 1840. He joined the Methodist Church at the age of 15, and, while serving in the Twelfth Pennsylvania Volunteers during the Civil War, organized and conducted religious services among his fellow soldiers. After the war he became prominent in Y. M. C. A. work; and at the Y. M. C. A. convention of 1870, held in Indianapolis, he first met Dwight L. Moody, with whom he was to be associated in evangelistic work for the next 29 years. From 1870 on, Moody and Sankey held revival meetings in nearly every large city in the United States; in 1873-75 they toured through England. At these meetings Moody usually preached, while Sankey took charge of the singing. After Moody's death, in 1899, Sankey conducted a series of meetings alone, and delivered lectures upon Moody's work. In 1902 Sankey left the Methodist Church to become a Presbyterian. He wrote an immense number of hymns, both words and music, and compiled numerous hymn books. Among these are: *Sacred Songs and Solos* (1873); *Gospel Hymns* (1875); *Winnowed Songs for Sunday Schools* (1890); and *Young People's Songs of Praise* (1902). Of the *Sacred Songs and Solos* alone, more than 50,000,000 copies have been sold. Three of his

most famous hymns were "Pull for the Shore, Sailor," "Throw Out the Life Line," and "The Ninety and Nine." Although very mediocre, both as to words and music, his hymns were tremendously effective at revival meetings. Sankey became totally blind in 1903. In 1906 he published *My Life and Sacred Songs*.

SANTO DOMINGO, or DOMINICAN REPUBLIC.

A republic occupying the larger eastern half of the island of Haiti, West Indies. Area, about 18,700 square miles; population, about 416,000, mostly of mixed European and African blood. The prevailing language is Spanish. The principal cities, with their estimated populations, are: Santo Domingo, the capital, 20,000; Santiago, 12,000; Puerto Plata, 5,000; Macoris, 5,000. There are some 300 schools with about 10,000 pupils. On Nov. 19, 1908, the President decreed the establishment on Dec. 1 of an academy of drawing, painting, and sculpture, for which \$3,000 had been appropriated. Instruction was to be free, with day and night classes, and a graded course of four years.

PRODUCTION. The mineral resources include gold, copper, iron in immense quantities, extensive coal deposits, including the best anthracite, silver, platinum, quicksilver, tin, salt, sulphur and alum. The petroleum belt measures over 190 square miles; its exploitation has been begun by the West Indian Petroleum Mining Company, an American corporation. On the high plateaus of the central mountain range there are fully 3,000,000 acres of excellent yellow pine and 6,000,000 acres of hardwoods. Sugar is the most important agricultural product; in 1907 its export amounted to 54,100 tons. The tobacco crop of 1907 was disappointing both as to quantity (26,400,000 pounds) and quality; the export of tobacco in 1907 was 21,802,982 pounds. The production of cacao is rapidly extending; its export in 1907 was 22,384,082 pounds. The export of coffee in 1907 was 3,376,970 pounds; of bananas, 640,000 bunches. The cultivation of rice and cotton has been begun, and cattle-raising and dairying are receiving increased attention.

FOREIGN COMMERCE. In 1907 the total imports amounted to \$5,156,121, against \$4,281,337 in 1906, and the total exports \$7,638,536, against \$6,543,872 in 1906. The principal imports in 1907 were: Cotton manufactures, \$1,218,679; iron and steel and their manufactures, \$537,707; flour, \$325,786; rice, \$472,145; leather and manufactures thereof, \$139,133; oils, \$268,197; provisions, \$305,581; fish and fish products, \$162,234; wood and its manufactures, \$159,087. The values of the principal exports in 1907 were: Cacao, \$2,988,453; raw sugar, \$2,099,679; leaf tobacco, \$1,341,233; bananas, \$319,500; coffee, \$252,390. Other exports were honey, sisal, wax, woods, etc. The trade by countries in 1907 is shown in the following:

From and to	Imports	Exports
United States.....	\$2,863,700	\$3,329,018
Germany.....	953,963	2,759,624
Great Britain.....	761,787	330,787
France.....	250,408	1,078,308
Spain.....	123,448	4,320
Italy.....	103,903	11,617
All other countries.....	98,903	125,853

COMMUNICATIONS. The number of vessels entered in the foreign trade in 1907 was 772, of

840,256 tons; of those cleared, 759, of 831,053 tons. In the coastwise traffic 3,840 ships, of 76,444 tons, entered, and 3,954 ships, of 49,274 tons, cleared. The principal ports are Puerto Plata, Sanchez, Santo Domingo, Macoris, Samana, Monte Cristi, and Azua. There are about 130 miles of railway and over 430 miles of telegraph. In Feb., 1908, the government took over the Central Dominican Railway from the Dominican Improvement Company. The road is managed by a Scotch engineer, and is being regraded and furnished with new rolling stock from the United States. The ties are made from a native wood.

FINANCE, ETC. In 1907 the total revenue amounted to \$3,964,632, of which \$3,314,119 was from customs; the expenditure was \$2,355,531. With the balance from former years, there was at the beginning of 1908 a total balance of \$4,217,178, of which \$3,932,577 had been deposited with the National City Bank of New York in trust for the national creditors. This latter sum, it has been reported, has now been distributed among the creditors. The budget for 1908-9 estimated the total revenue and expenditure at \$3,984,300. The sum of \$1,808,708 is assigned to the Department of Treasury and Commerce; \$76,800 to the construction of railways; \$75,000 to irrigation works in Monte Cristi province, and other sums to building of roads, construction and repair of lighthouses, etc. By a Presidential decree of March 31, 1905, an American was appointed receiver-general of customs, with authority to deposit 55 per cent. of the net customs revenue in trust for the national creditors. The face value of the debt of the republic was originally about \$30,000,000, but through the efforts of agents of the United States government, was scaled down to about \$17,000,000. In the early part of 1908 the Dominican government entered into three agreements for the adjustment of the national debt. On Jan. 27, 1908, an agreement was made with Messrs. Kuhn, Loeb & Co., of New York, for the issue of \$20,000,000 of bonds, at 5 per cent., guaranteed by the customs revenue. On Jan. 24, 1908, the Samana and Santiago Railroad Company agreed to abandon its right, dating from 1887, to collect for a period of thirty-five years 7 per cent. of the import duties at the custom house of Sanchez, in exchange for \$195,000 of bonds at 5 per cent. On Feb. 13, 1908, an agreement was made with various companies for the surrender to the government of old bonds to the amount of £830,654, of the Dominican Central Railroad, and of all rights and interests in the National Bank of Santo Domingo, for the sum of \$4,312,243.

The regular army consists of an artillery corps numbering 650 men. The rural guard contains about 500 men. The navy consisted at the beginning of 1908 of one unprotected small cruiser, of 1,000 tons, and two gunboats, of 722 tons. On July 1, 1908, Ramon Caceres was inaugurated President of the republic to succeed himself.

HISTORY. The new constitution, submitted to Congress on Dec. 18, 1907, went into effect on April 2, 1908. It fixes the term of office of the President at six years and abolishes the vice-presidency. On April 3, 1908, Congress passed a sanitary law, which was promulgated by President Caceres on June 6, and was to go into effect on Jan. 1, 1909. The law prescribes

the creation of a central, or national, sanitary board and provincial and municipal boards, and makes provision for the establishment of sanitary stations in the maritime ports of the republic. On June 15, 1908, the Dominican republic ratified the convention on literary and artistic copyrights, adopted by the second Pan-American Congress, at Mexico City, in 1902. On the same date it also ratified the convention on international law, adopted by the third Pan-American Congress at Rio de Janeiro in 1906.

SARASATE Y NAVASCUES, PABLO MARTIN MELITON DE. A Spanish violinist, died on Sept. 20, 1908. He was born in Pompeluna, Spain, on March 10, 1844. After receiving some preliminary instruction from his father, who was bandmaster in his native town, he went to Madrid, about 1851, and studied the violin under Rodriguez. In 1854, when only 10 years old, he played at the Spanish court, and so impressed Queen Isabella by his remarkable talent that she agreed to pay for his music lessons for a term of three years. Accordingly, in 1856, he entered the Paris *Conservatoire*, where he studied the violin under Alard, and harmony and composition under Reber. His first public appearance was made at the Crystal Palace, London, in 1861. His life-long friendship with Joachim also dates from this year. From 1861 until his death, his career was one of unbroken and steadily increasing success. He played in nearly every country in the civilized world, and appeared at every court in Europe, receiving countless orders and decorations. He visited America twice; in 1869, when, together with Christine Nilsson, he appeared in New York, Boston and Philadelphia; and in 1899, when he toured the country with Eugen d'Albert, the pianist. As a player, he ranked among the greatest virtuosi of the nineteenth century. His technic was flawless, and he possessed a tone of wonderful delicacy and perfection of intonation. Among a number of compositions written especially for him are Bruch's *Second Concerto* and Lalo's *Symphonie Espagnole*. Sarasate's playing was, however, expressive rather than interpretative. He found it difficult to subordinate his own personality to that of the composer, and was at his best when playing his own compositions. These last are of great brilliancy, intensely Spanish in character, and mostly take the form of dances or fantasies.

SARAWAK. A British protectorate on the west coast of the island of Borneo. Area, 39,855 square miles; population, about 500,000. Kuching, the capital, is connected by steamer with Singapore. Gold, silver, antimony, quick-silver, coal, and diamonds are found. Sago, rubber, wax, rice, tobacco, gambier, and pepper are among its products. The imports and exports in 1907 amounted to 5,172,004 and 6,717,419 dollars respectively, the export of gold amounting to 1,513,800 dollars. The Rajah is Sir Charles Johnson Brooke. The revenue in 1907 was 1,441,194 dollars; the expenditures, 1,359,273 dollars.

SARDOU, VICTORIEN. A French dramatist, died on Nov. 8, 1908. He was born in Paris on Sept. 7, 1831, studied medicine, taught school for a time, and finally became a writer for newspapers. His first play, produced in 1854, was an utter failure. In 1860, however, Mlle. Déjazet, a Parisian actress-manager, produced

his *Pattes de Mouches* (well known as "A Scrap of Paper"), which was an immediate success. His subsequent plays numbered nearly sixty, and were almost all of them successful, although of very unequal merit. Whatever rank may be accorded Sardou as a creative dramatist, there is no question of his commanding abilities, his wide learning, his notably keen power of observation, his gifts of humor and satire, and his extraordinary capacity as a stage manager. In the mechanical side of play-building he has probably never been excelled. He was quick to recognize the popular taste and to gratify it. He had no great concern for elevating or directing the dramatic taste of his audiences. Sardou's most notable successes were in those plays which he wrote for the use of Sarah Bernhardt and other star performers. Among these were *Fédora*, *Théodora*, *La Tosca*, and *Cléopâtre*. These he wrote for Madame Bernhardt. For Coquelin he wrote *Thermidor*; for Réjane, *Mme. Sans-Gêne*, and for Henry Irving, *Robespierre* and *Dante*. One of the cleverest of his plays was *Divorçons*, which was very successful in the translated form in the United States. Many of his other plays were successful in English. He was elected to the French Academy in 1877. The best of his plays, in addition to those named above, are: *Piccolino* (1861); *Seraphine* (1869), and *La Sorcière* (1904).

SARGENT, FRANK PIERCE. An American labor leader, and commissioner-general of immigration, died on Sept. 4, 1908. He was born at East Orange, Vt., on Nov. 18, 1854. He was made grand master of the Brotherhood of Locomotive Engineers in 1885. He declined the appointment as member of the Industrial Commission, offered him by President McKinley in 1898, and also that of director of the Bureau of Engraving and Printing, which was offered him in 1900, because he did not wish to sever his connection with the Brotherhood. In 1902, however, he was appointed commissioner-general of immigration by President Roosevelt, and accepted.

SASKATCHEWAN. A province of Canada. Area, 250,650 square miles. Population in 1901, 91,460; in 1906, 257,763. Regina, the capital, had 6,169 inhabitants in 1906. For details respecting population, education, production, etc., see CANADA. The provincial government consists of a lieutenant-governor, appointed by the governor-general of Canada and acting through an executive council, or responsible ministry, and a unicameral legislative assembly of 25 elected members. The present lieutenant-governor is Amedée Emmanuel Forget, appointed Sept. 1, 1905. The present premier is Walter Scott.

HISTORY. The history of the province in 1908 was unusually interesting and exciting, because of the importance of the legislative session which began in April, and of the provincial elections which followed in midsummer. During the session of the legislature laws were passed establishing a provincial university, increasing representation in the legislature, remodeling the municipal organization, consolidating the laws of the province, establishing a government telephone system, and regulating liquor licenses. The last-named measure was supported by both parties, and its most outstanding feature was the local option provision according to which the privilege of deciding whether or not liquor

licenses shall be issued in a local district is limited to cities, towns, and rural municipalities, the village being merged in the rural municipality. After the legislature was dissolved, the political campaign became unusually warm, with much recrimination and charges and counter charges of fraud and corruption. The Liberal premier, Walter Scott, had a good record of three years' legislation, while F. W. Haseltain, leader of the Conservative opposition, advocated restoration of the public lands to the province (on the formation of Saskatchewan in 1905 the federal government retained control of these lands, granting an additional subsidy in lieu thereof), and made charges of extravagance and corruption. Premier Scott's government was sustained by a majority of thirteen.

SATTERLEE, HENRY YATES. First Protestant Episcopal bishop of Washington (D. C.), died on Feb. 22, 1908. He was born in New York city on Jan. 11, 1843. He graduated at Columbia in 1863, and at the General Theological Seminary in 1866, and was ordained to the Protestant Episcopal priesthood in 1867. The same year he was called to be assistant rector of Zion Church, at Wappinger's Falls, N. Y., where he became rector in 1875. In 1882 he was called to Calvary Church, New York City. Here he remained until 1896, taking an active part in mission work, especially among the East Side poor. He declined the post of coadjutor bishop of Ohio in 1887, and of bishop of Michigan in 1889. In 1896, however, he left his parish to become bishop of Washington. He wrote several books, among which are *A Creedless Gospel and the Gospel Creed* (1894); and *The Building of a Cathedral* (1902).

SATTERLEE, WALTER. An American painter and illustrator, died on May 28, 1908. He was born in Brooklyn in 1844, graduated at Columbia in 1863, and studied art in the National Academy of Design, and under Edwin White, and in 1878-79, under Leon Bonnat, in Paris. He was awarded the Clark prize in 1886 at the National Academy of Design, of which he was made an associate in 1879. He frequently painted colonial subjects. Some of his better known pictures are "The Runaways," "The Old Garden," "The Feast of Flora," "An Old Time Coquette," and "Old Ballads."

SATURN. See ASTRONOMY.

SAVINGS BANKS. The number of savings banks in the United States in 1908, according to the report of the Comptroller of the Currency, was 1,453, as compared with 1,415 in 1907. Since depositors in savings banks are for the most part working people, it is of interest to find that the total number of depositors was 8,705,848, or almost one for every ten inhabitants, and that the aggregate savings deposits were \$3,660,553,945, an average of \$420.47 for each depositor. There are two classes of savings banks in the United States, mutual and stock. Mutual savings banks numbered 676, all found in the New England and Middle States, except 1 in West Virginia, 3 in Ohio, 5 in Indiana, 2 in Wisconsin and 14 in Minnesota. These mutual banks had 7,137,481 depositors, and an aggregate of \$3,065,686,012, an average of \$429.52 for each account. These deposits represented nearly 24 per cent. of the total individual deposits in all banks of the United States. Moreover, the aggregate resources of mutual savings banks in New England

represented more than half the aggregate banking resources of that section. The average deposit account was highest in Rhode Island, \$547.79; next highest in Ohio, \$541.10, and third highest in New York, \$508.78. The average rate of interest on deposits was 3.7 per cent. in New England, and 3.49 per cent. in the Middle Atlantic States. The stock savings banks in 1908 numbered 777, located in the District of Columbia, North Carolina, South Carolina, Florida, Iowa, Nebraska, Colorado and California. They had 950,585 depositors, credited with \$413,506,879, an average of \$435. They paid an average interest of 3.53 per cent. While more numerous than mutual savings banks, the stock savings banks held only one-eighth of the total savings bank assets. Moreover, while the former showed slight gains in assets and deposits as compared with their condition in 1907, the latter showed a decided decrease in both items. This decrease was, however, almost entirely due to the decrease in the assets and deposits of the stock savings bank of California. Taking all savings banks together, the statistics for 1908 as compared with those for 1907 show an increase of 117,037 in the number of depositors, a decrease of

\$29,525,000 in aggregate deposits (due to decline in California), and a decrease in the average deposit from \$429.64 to \$420.47. The table on page 641 from the report of the Comptroller of the Currency gives the data for all savings banks by States for 1908. The correlation of industrialism and savings banks is shown by the preëminence of such highly industrial States as New York, Massachusetts, Connecticut, Pennsylvania and Illinois in the statistics of this table.

SCHOOL savings banks for the encouragement of thrift among school children have been started in many cities by persons interested in the idea. The method followed is for pupils to bring their savings to their teachers, who in turn deliver them to some person keeping the accounts for the whole school. The money is deposited at interest in local banks. By Jan. 1, 1908, such a system had been introduced in 1,102 schools in 101 cities in the United States and Canada. The depositors numbered 178,817 and the deposits aggregated \$759,646.

The following table from the comptroller's report was compiled from official sources. The table includes all savings banks, private, municipal and government, including postal:

DEPOSITORS AND AMOUNT OF DEPOSITS IN SAVINGS BANKS (INCLUDING POSTAL SAVINGS BANKS) OF PRINCIPAL COUNTRIES.

Countries	Population	Date of reports	Number of depositors	Deposits	Average deposit account	Av. dep. per inhab.
Austria	27,202,000	Dec. 31, 1905-6	5,685,547	\$1,086,797,635	\$191.15	\$39.95
Belgium	7,239,000	Dec. 31, 1906	2,419,740	156,733,934	64.77	21.65
Bulgaria	4,028,000	Dec. 31, 1904	1,124,007	2,723,782	21.95	.68
Chile	3,400,000	June 30, 1908	198,419	22,876,142	115.29	6.73

Philippine Islands		June 30, 1908	5,389	529,833		

a Exclusive of data for special private savings banks, which on March 31, 1906, held deposits amounting to \$28,574,954. This total does not include the savings deposits in chartered banks (deposits payable after notice or on a fixed day), which, on Sept. 30, 1908, amounted to \$410,332,819.

The number of depositors in savings banks per 1,000 of the total population in those countries showing greatest numbers were: Denmark, 520; Switzerland, 420; Sweden, 375; New Zealand, 380; Norway, 359; France, 319; Japan, 295; Germany, 294; Netherlands, 291; Australia, 288; United Kingdom, 283; Austria, 209; and United States, 100. Of the number of de-

positors shown in this table, 39,266,993 were depositors in postal savings banks, and the total deposits of these institutions amounted to \$2,024,807,191, while the average deposit was \$51.57. The largest number of depositors was found in the United Kingdom, where there were 10,692,555, the deposits amounting to \$766,474,125. See POSTAL SAVINGS BANKS.

SAVINGS BANKS IN 1908.

g Included in abstract of State banks having savings departments.

SAXTON, RUFUS. An American soldier, died in Washington on Feb. 23, 1908. He was born at Greenfield, Mass., on Oct. 19, 1827, and graduated at the United States Military Academy in 1849. He was in the artillery until May, 1861, his most important service being the survey of the present route of the Northern Pacific Railroad across the continent, largely through territory never before visited by white men. He was made captain and assistant quartermaster in 1861 and the remainder of his service was in that department, until his retirement with the rank of colonel in 1888. He rendered valuable services during the Civil War, particularly as chief quartermaster of McClellan's army in West Virginia in 1861, and in organizing the transportation for the expedition to Port Royal of Gen. Thomas W. Sherman, on whose staff he also served as chief quartermaster. He became a brigadier general of volunteers in 1862 and was military governor of the department of the South during the remainder of the war, his chief duty being the enlistment and organization of colored troops. He was brevetted major general of volunteers for his Civil War service and in 1904 was given the rank of brigadier general and placed on the retired list of the army.

SCENIC AND HISTORIC PRESERVATION SOCIETY, AMERICAN.

A society organized for the protection of the beauties of natural landscape from disfigurement, the preservation of geological formations, and saving from obliteration all names, places and objects identified with local State and national history, the erection of historical memorials, etc., incorporated by the New York State Legislature in 1895. The society is required to report annually to the Legislature, and thus occupies a quasi-official position. It is the custodian of five State properties: Stony Point Battlefield, 34 acres; Watkins Glen, at the head of Seneca Lake, 103 acres; Letchworth Park on the upper Genesee River at Portage Falls, 1,000 acres; Fort Brewerton, at the foot of Oneida Lake, one acre, and Philipse Manor Hall, Yonkers. The honorary president of the society is J. Pierpont Morgan; president, George F. Kunz, and secretary, Edward Hagaman Hall.

SCHOOLS, PROFESSIONAL. See PROFESSIONAL SCHOOLS.

SCHRADER, EBERHARD. A German Orientalist, died on July 4, 1908. He was born in Brunswick on Jan. 5, 1836, studied under Ewald at Göttingen, and became professor of theology at Zürich in 1863, at Giessen in 1870, and at Jena in 1873. In 1875 he took the chair of Oriental languages at Berlin, which post he held during the remainder of his life, though since 1895 partial paralysis had made it impossible for him to discharge all of the duties of his professorship. He at first interested himself chiefly in Bible criticism, but afterward he devoted himself to the Assyrian language and Assyrian civilization, on which subjects he became known as the foremost scholar in Germany. His publications include: *Studien zur Kritik und Erklärung der biblischen Urgeschichte* (1863); and *Die assyrisch-babylonischen Kielinschriften* (1872); *Die Kielinschriften und das Alte Testament* (1872; 2d ed., 1883; 3d ed. with Zimmern and Winckler, 1901-02), English translation 1872.

SCHRÖTTER, LEOPOLD VON CHRISTELLI. An Austrian laryngologist, died on April 21, 1908. He was born in Graz on Feb. 5, 1837, studied in the University of Vienna, devoting himself especially to diseases of the throat and chest, and became connected with various Vienna hospitals where he became known as a skillful operator, along the lines followed by Türck and Czermak. To the public he was even better known as a leader in the movement to prevent the spread of tuberculosis; as an advocate of the development of Abbazia and the Austrian Riviera for a health resort, and as the founder of the Alland Sanatorium near Vienna. Dr. von Schrötter in 1887 diagnosed the disease from which the Crown Prince Frederick, of Germany, was suffering, and told him frankly that it was incurable, though he refused to describe the malady as cancerous. On the day of his death he had delivered the inaugural address to the International Congress of Laryngology at Vienna.

SCIENCES, NATIONAL ACADEMY OF. A society organized for the examination and investigation of any subject of science or art, and for

making reports at the call of the United States government, the actual expense of such examination and report to be paid out of the appropriation made for that purpose. It was incorporated by act of Congress May 3, 1863. The academy cannot, under any circumstances, receive compensation from the government for its services. Annual reports are made each year at the meetings, which are held at such places in the United States as may be specially designated. The annual meeting is held in Washington on the third Tuesday in April. The academy is composed of members, honorary members and foreign associates. Citizenship is prerequisite to full membership, while the number of foreign associates is limited to 50. The academy had in 1908 a membership of 106, with 42 foreign associates. The officers are elected for six years. Those in office in 1908, with the dates of their expiration, were as follows: President, Ira Remsen (1913); vice-president, Charles D. Walcott (1913); foreign secretary, Simon Newcomb (1909); home secretary, Arnold Hague (1913); treasurer, S. F. Emmons (1914). The autumn meeting in 1908 was held at Baltimore on Nov. 17 and 18. Among the important papers read were the following: "The Close of the Cretaceous and the Beginning of the Eocene in the Hell Creek Region of Montana, Based on Explorations of the American Museum Between 1902 and 1908," by Henry F. Osborn; "The Distribution of Sound through a Megaphone or Speaking Trumpet," A. G. Webster; "Certain Examples of Bio-Chemical Control of Cell Development," by Simon Flexner; "Further Studies of the Effect of a Low Protein Diet on High Protein Animals," Russell H. Chittenden; "The Work of the United States Fish Commission Ship, *Albatross*," Alexander Agassiz; "The Effects of Centrifugal Force on the Organization and Development of the Eggs of Certain Animals," by P. G. Conklin.

SCOTLAND, CHURCH OF. The established and State church of Scotland. The Crown is represented in its government by a Lord High Commissioner, who is appointed annually. The Church of Scotland is Presbyterian in government. Its congregations are ruled by a board of elders or laymen, elected for life from the church members. The church includes 785 ministers, 175 missionaries, 1,414 parishes, 1,655 churches, 84 presbyteries, 16 synods, and 698,566 communicants. Its income, exclusive of bequests, is about £550,000. There are 13 churches in England connected with the Church of Scotland and 6 at various places on the continent of Europe. Missions are carried on in India, Africa and China.

SCOTLAND, UNITED FREE CHURCH OF. A religious body formed in 1900 by the union of the Free Church of Scotland and the United Presbyterian Church. The churches number 1,631, the ministers 1,733, missionaries 331. In addition it has 4,063 elders, 16,492 communicants, 506,080 in Scotland and 44,728 in foreign fields. There are 25 continental stations. The annual income is about £1,000,000. A considerable number of ministers, elders and communicants of the Free Church were opposed to union with the United Presbyterian Church. They held the union to involve the surrender of the principles of national religion and of the confession of faith. They therefore refused to enter the union and were extruded by the ma-

jority who are now in the United Free Church from the use of their church buildings and funds. In an appeal to the Scottish courts, the judges found in favor of the United Free Church, and in the House of Lords final judgment was given in favor of the non-uniting remnant, which was found in law to be the Free Church of Scotland. The effect of this decision was to vest the whole of the funds and heritable property of the Free Church in the non-uniting minority, and as they were not able to occupy all the churches or administer the funds, a royal commission was appointed in Dec., 1904, to inquire into the matter. An act of Parliament was passed in 1905 by which an executive commission was established which proceeded to allocate the property, etc., between the two churches. The Free Church of Scotland consists of 5 synods, 12 presbyteries, 81 ministers, and 200 congregations, representing about 100,000.

SCULPTURE. The most interesting exhibition of sculpture during 1908 was that of the work of the late Augustus Saint-Gaudens held at the Metropolitan Museum. Reproductions of all the noted sculptor's masterpieces were shown under favorable conditions. The exhibition was visited by thousands of art lovers and remained open for several months.

The Academy of Design's winter exhibition was notable for the first adequate display made in New York by American sculptors as a body. Mr. Frank J. Gould loaned his riding circle adjoining the Fine Arts Building and the National Sculpture Society arranged the exhibition in connection with that of the academy. Of the larger groups shown that by Lorado Taft representing a Maeterlinck group of blind men and women pushing their way in the wake of a young girl who holds aloft a child, showed excellent modeling and no little imagination. But the question as to what purpose is served by this gruesome portrayal of a painful scene upon so imposing a scale, and involving such labor, is a pertinent one hard to answer. Daniel C. French showed a "Mourning Victory" for the Melvin Monument—an angel whose fine face is shadowed by the American flag, holds out a branch of laurel. An attempt to improve upon the country's soldiers' monuments that add a pang to grief, is made by Augustus Lukeman, who at least deserves praise for good intentions. His winged figure holds aloft a flag and follows the typical soldier. The composition, while ill-balanced, has some good detail. Gutzon Borglum's equestrian figure of General Sheridan is a spirited piece, full of action.

The "Primitive Marksman," an Indian lying upon his back drawing the bow, by Miranda, is full of life-like vigor. Chester Beach's "Waterfall," in which the falling water is made to suggest a nude figure, has some grace, but is hardly so pleasant in achievement as his "Baby's Head." Paul W. Bartlett and Robert I. Aitken both showed nudes of interest. The latter sculptor also had a strong head of the actor, David Warfield. Some nicely modeled children were by J. Scott Hartley. Sergeant Kendall reproduced the lively child that he portrayed so successfully upon canvas in the adjoining exhibition of painting. A graceful fountain with a girl and satyr was by H. A. MacNeil. Important contributions were also made by Herbert Adams, Karl Bitter, A. S.

STATUE OF GENERAL P. H. SHERIDAN
By Gutzon Borglum

By Daniel C. French

SOLDIERS' MONUMENT FOR SOMERVILLE, MASS.
By Augustus Lukeman

Eberle, Bela L. Pratt, and Enid Yandell. The Helen Foster Barnett prize was awarded to Mr. Aitken for his nude group, "The Flames."

The National Sculpture Society also held in Baltimore a spring exhibition at which nearly five hundred works were shown. Plaster casts of Solon Borglum's statue of General J. B. Gordon, and Karl Bitter's monument to General Franz Siegel and Shradys' "Washington at Valley Forge" were among the most important pieces.

SCULPTURE SOCIETY, NATIONAL. A society of sculptors, organized for the promotion of appreciation of ideal sculpture, the improvement of the quality of the sculptor's art as applied to industries, and the providing from time to time for exhibitions of sculpture and the objects of industrial art in which sculpture enters, incorporated in 1896. In 1908 the society had 249 members, of whom 91 were sculptor members, whose work has to pass a special committee before being recommended for election. Exhibitions are held under the auspices of the society in different cities in the United States. The first of these was held in April, 1908, at Baltimore. The president of the society is Herbert Adams, and the secretary J. Scott Hartley, 215 West 57th street, New York city.

SEISMOLOGY. See EARTHQUAKES.

SELFRIDGE, THOMAS E. An American soldier, died Sept. 17, 1908 at Fort Myer, Va. He was born in San Francisco, Cal., in 1882, and graduated from the United States Military Academy in 1903. He became a second lieutenant in the artillery corps in that year and was made first lieutenant in 1906. He became interested in aeronautics and at his own request was transferred to the signal corps in 1907. He became a member of the aeronautic board of the army and on the day of his death was engaged in a flight with Orville Wright in his aeroplane which was preparing for a government test at Fort Myer. One of the propellers broke and the machine fell to the ground from a height of about seventy-five feet. Wright was seriously injured, and Lieutenant Selfridge died three hours later in the Fort Myer hospital.

SENEGAL. A French colony in West Africa, consisting of the colony proper and the former protectorate, rejoined to the colony in 1904. The total area is estimated at 806,000 square miles, and the population at over 1,100,000, of whom 200,000 are under direct French administration. In the colony proper, on the coast, are the municipal communes of St. Louis, the capital, with 24,070 inhabitants in 1904; Dakar, a fortified naval station and the principal port, the seat of the governor general of French West Africa, with 18,447 inhabitants; Rufisque, 12,446 inhabitants; and Goree, 1,560 inhabitants. The products include maize, millet, rice, castor beans, coconut, rubber, gum, and earth-nuts, the latter forming the principal export. In 1906 there were produced 388 pounds of cotton and 45,766 pounds of seed cotton. In 1907 the imports, including those of Upper Senegal-Niger, were valued at 54,698,406 francs, and the exports at 43,858,850 francs. The trade is mainly with France, England and Germany, which have regular steamship connection with Dakar. The imports from France in 1907 amounted to 30,895,000 francs, and the exports

to France, 32,681,000 francs. The harbor of Dakar has been greatly improved. During the rainy season a steamship service is maintained on the Senegal from St. Louis to Kayes, a distance of 490 nautical lines. Dakar, Rufisque and St. Louis are connected by a railway, 164 miles long. A narrow-gauge railway runs from Kayes, on the Senegal, to Koulikoro, on the Niger, 343 miles long. The length of telegraph line in 1906 was 1,363 miles. A submarine cable connects Dakar with Brest, France. The colony is administered by a lieutenant-governor, who is under the governor-general of French West Africa (q. v.). The natives of the four above-mentioned communes are French citizens, and elect the deputy who represents the colony in the French Chamber.

SENN, NICHOLAS. A distinguished American surgeon, died on Jan. 2, 1908. He was born in Buchs, Canton St. Gall, Switzerland, on Oct. 31, 1844, in his ninth year came to the United States with his parents, who settled at Ashford, Wis., and for several years lived on a farm there. He studied at the Chicago Medical College, and graduated at that institution in 1868, and ten years later he studied at the University of Munich. He was house physician at the Cook County Hospital in 1868-69; practiced in Fond du Lac in 1869-74, and in Milwaukee in 1874-93; was professor of surgery at the Chicago College of Physicians and Surgeons in 1884-87, and of the principles of surgery at that institution in 1887-90, when he became professor of practical and clinical surgery at the Rush Medical College. He was also professor of surgery in the Chicago Polyclinic, and professorial lecturer on military surgery at the Chicago University. Since 1893 he had practiced in Chicago. Dr. Senn served as surgeon-general of Wisconsin, and as surgeon-general of the National Guard of Illinois, and at the beginning of the Spanish-American war he was appointed chief surgeon of the Sixth Army Corps (with the rank of lieutenant-colonel of volunteers), and chief of the operating staff in the field, in which position he served until Sept., 1898, at Chattanooga, Tenn., at Santiago, Cuba, at Ponce, Porto Rico, and at Montauk Point, L. I., introducing many improved methods of sanitation into the camps. Dr. Senn was the author of several works of much professional value, such as *Varicocoele* (1878); *Experimental Surgery* (1889); *Intestinal Surgery* (1889); *Surgical Bacteriology* (1889); *Principles of Surgery* (3d ed., 1901); *Medico-Surgical Aspects of the Spanish-American War* (1900), and *Practical Surgery for the General Practitioner* (1901).

SERUM THERAPY. The search for specific sera continued in many laboratories during 1908. The only serum, with the possible exception of tetanus antitoxin, which has been at all comparable in its results with diphtheria antitoxin, was Flexner's antiserum for cerebro-spinal meningitis. A large number of cases published by widely separated clinicians seemed to prove that this substance aborts many cases, relieves the symptoms, shortens the course and lessens the mortality of this disease. Favorable effects are proportional to the promptness with which the serum is given. The mode of administration is by injection directly into the spinal canal, after this is punctured and an amount of spinal fluid withdrawn equal to the dose of serum

to be injected, about 30 c.c. Although the mortality of this disease varies in different localities and also in different epidemics, and although the epidemic and sporadic forms differ in severity, the death rate of cerebro-spinal meningitis averaged from 70 to 90 per cent. under symptomatic treatment. With the serum this death rate has been reduced to 25 per cent. or lower. In New York City in 1906 there were 5,000 cases with a mortality of 70 per cent. Since that time Flexner and Jobling, of the Rockefeller Institute, have collected 400 cases of meningitis treated with antimenigitis serum out of which 75 per cent. recovered and 25 per cent. died. The antiserum was produced by Flexner and Jobling as follows: Horses are inoculated subcutaneously with a small quantity of mixtures of cultures of different strains of the meningococcus heated to 60° C. for half an hour, and subsequently the dose is doubled at each injection, at seven-day intervals. Certain animals were kept under the process of immunization for a year. Hot horse serum was used by Petit in the local treatment of wounds and burns. He reports that healing was much more rapid in the burns treated with hot serum than with picric acid or boric acid, and attributed the favorable action to the circumstance that the serum revives injured cells so that they aid in the healing process, instead of dying and generating poisons. The serum also brings leucocytes to the spot. Pyocyanase is the filtrate of a three weeks' old culture of the pyocyanus bacillus. This substance has been used as an adjuvant to antitoxin in the treatment of diphtheria. It is used locally as a spray and possesses the property of rapidly killing the bacilli swarming in the patches of membrane in the throat. Other serums are mentioned under ANTITOXIN, LEPROSY, PLAGUE, and RABIES (q. v.).

SERVIA. An inland kingdom of the Balkan peninsula. Area, 18,649 square miles. Population on Dec. 31, 1907, 2,784,016, against 2,492,882 in 1900. In 1907 there were 29,565 marriages, 109,490 births, and 62,451 deaths. The principal cities in 1905 were: Belgrade, the capital, 79,110; Nish, 21,946; Kraguyevatz, 15,596; Leskovatz, 13,647; Pozarewatz, 12,162; Shabatatz, 12,151; Vrania, 11,375; Pirot, 10,000.

PRODUCTION. The wheat crop in 1907 was 11,000,000 bushels, against 13,211,000 in 1906; maize in 1907, 27,786,000 bushels, against 21,431,000 in 1906; oats in 1907, 4,000,000 bushels, against 4,642,000 in 1906; wine in 1907, 10,000,000 gallons; sugar beets in 1907-8, 32,800 metric tons, and estimated for 1908-9, 45,000 metric tons. The production of beet sugar in 1907-8 was 4,250 metric tons, and for 1908-9 it was estimated at 6,750 tons. Coal, lignite, gold, copper, lead, antimony, and other minerals are mined. The late tariff war with Austria-Hungary gave an impulse to the domestic industry. The pork-packing industry has been firmly established. A new flour mill was erected, and old ones were enlarged. An electric plant was installed at the government tobacco factory. Two factories for the making of brick and tile were erected, one for the manufacture of hemp goods, and one for weaving hemp and flax.

COMMERCE AND COMMUNICATIONS. The imports and exports in 1907 amounted to 70,583,327 and 81,491,262 dinars, respectively, against 44,328,642 and 71,604,098 in 1906 (dinar=

franc=19.3 cents). The principal imports in 1907 were: Agricultural and forest products, 10,264,000 dinars; metals, 10,562,000; drugs and chemicals, 3,998,000; textile raw materials and manufactures, 23,049,000 (yarn, 6,012,000; woollens, 7,288,000); implements and machinery, 6,352,000. The exports of agricultural and forest produce amounted to 73,604,000 dinars, including wheat, 10,303,000; maize, 11,820,000; barley, 4,041,000; plums, 15,744,000; fresh and salted meats, 3,803,000; pigs, 1,614,000; hides and skins, 2,749,000. The export of minerals and metals amounted to 5,010,000 dinars. The trade with the principal countries of origin and destination in 1907 was as follows, in dinars:

From and to	Imports	Exports
Austria-Hungary	25,569,946	12,932,390
Germany	20,320,391	32,925,623
Great Britain	10,220,270	2,337,453
Belgium	755,696	13,010,853
Turkey	3,327,000	4,379,000
Russia	854,000	3,134,000
France	2,429,000	2,705,000
Italy	2,299,000	4,899,000

Owing to the tariff war with Austria-Hungary, which began in 1905, the trade of the latter with Servia has greatly fallen off. The imports of Servia from Austria-Hungary in 1904 amounted to 36,584,000 dinars, and in 1905, 33,376,000. The exports of Servia to Austria-Hungary amounted to 55,351,000 dinars in 1904 and 64,712,000 in 1905. In 1906 Austria-Hungary's share was still 50.10 per cent. of the total imports and 41.96 per cent. of the total exports of Servia; in 1907 her share fell to 36.27 and 15.87, respectively. In March, 1908, the two countries at last concluded a commercial treaty, Austria raising the duty on Servian agricultural products, and Servia retaliating by raising duties on Austro-Hungarian industrial products from 20 to 40 per cent. The treaty was signed separately by the Austrian and Hungarian governments, but at the end of 1908 was still awaiting ratification by the Austrian and Hungarian parliaments.

The length of railways at the end of 1907 was 388 miles, nearly all owned by the government; of telegraph lines 2,136 miles.

GOVERNMENT AND FINANCE. The form of government is a constitutional monarchy. The present King is Peter I, born in 1844, who was elected King June 15, 1903, and ascended the throne June 25. The unicameral National Assembly is composed of 160 members, elected for four years. The franchise is based on the payment of 15 dinars in direct taxes. The State Council, composed of members partly appointed by the King and partly by the Assembly, supervise the general administration. The executive power is exercised through a responsible cabinet. The revenue and expenditure for 1908 were estimated at 95,239,038 and 95,091,253 dinars, respectively. The principal estimates of revenue were: Direct taxes, 25,962,950 dinars; customs, 11,394,006; excise, 25,353,000; state monopolies, 26,789,683; railways, 9,350,000; and of expenditure: Civil list, 1,200,000; public debt, 27,018,875; public works, 10,470,000; and war, 27,742,000. The public debt stood at 545,627,000 dinars on Jan. 1, 1908.

ARMY. Military service is universal and compulsory, with liability from 18 to 50 years of age

and service from 21 to 43 or 44 years of age.

The national army is composed of 3 bans,—the first consists of the active army and its reserve, constituting the first line; the second ban provides reserve troops, and the third the territorial army. There is also the *levée-en-masse* consisting of all men between 18 and 50 years of age, including those who have passed through the national army. Service is as follows:

In the first ban for 18 months in the infantry, 2 years in cavalry and field artillery in the ranks, and 9 years in the reserve of the active army; in the second ban, 5 years; in the third ban, 7 years. There are 20 regiments of infantry, 4 regiments of cavalry, 5 regiments of field artillery, 1 battery of horse artillery, 1 regiment mountain artillery, 1 regiment howitzers, and 2 battalions of fortress artillery. In war, the field army would amount to 110,000 combatants, and the reserve (second ban) would raise this to 175,000, while the supplementary reserve would bring the grand total to about 235,000 trained men. The peace strength of the army is about 37,000 of all grades.

HISTORY. On June 9, 1907, the premier, M. Pasitch, resigned, with his ministry, owing to the attacks of the Radical opposition, arising from charges made against the premier by the Servian minister at Berlin, but he was later re-appointed. The obstructive tactics of the Radicals continued, however, and on April 10, 1908, M. Pasitch again resigned and the ministry was reconstructed. The general election on June 1 gave the Government party 81 seats; the Young Radicals, 46; the Liberals, 16; the Progressists, 8, and the Socialists, 1. The Young Radical element continued to block the action of the legislature and the new Minister, M. Pera Velimirovich, who succeeded on July 6, found a new crisis on his hands. The King, however, sent for the leaders of the opposition and enforced a compromise, whereby after passing the budget and the tariff treaty with Austria-Hungary, the ministry should give way to a coalition government under M. Milovanovich. On August 18th the treaty with Austria passed, and was immediately put into effect, thus bringing an end to the customs war, which had lasted three years.

The chief events of the year arose from the proclamation of Bulgaria's independence and the annexation of Bosnia and Herzegovina by Austria, and for an account of them in relation to European affairs see the article **BALKAN QUESTION**. These two events greatly angered the Servians. In the first place the Austrian annexation of the provinces divided Serbia from Montenegro and cut her off from access to the sea. In the second place, Bulgaria was regarded as faithless to the interests of the Slav states, in that in return for Austrian recognition of her independence she acquiesced in the annexation and did not make common cause with her neighbors against Austrian encroachment. (See **BULGARIA**.) War feeling ran high at first, and 120,000 of the reserves were immediately called out. A government proclamation pointed to the violation of the Treaty of Berlin, and asked the signatory powers for justice, demanding either the restoration of the *status quo*, or failing that, compensation for the injuries done to Serbia. The war feeling, however, did not spread to the army or to the majority of the members of the Skupshtina. The latter held a secret session Oct. 10 and voted against war with Austria-Hungary. The war party, however, was active,

and made violent attacks in the press against the government. A movement against the existing dynasty was revived and King Peter was openly assailed in the newspapers. The Crown Prince, on the other hand, became a popular favorite on account of his denunciations of Austria's act, and his efforts to enlist the aid of Russia. Serbia entered into negotiations with Montenegro (q. v.) and it was understood that in the case of war the two states would stand together. It was reported that a military convention had been definitely agreed upon between them. The demands of Serbia and Montenegro were that a certain portion of Bosnia should be withdrawn from Austria and divided between the two states so that their boundaries might be co-terminus, but it did not appear that Austria-Hungary would, in any circumstances, consent to this, and danger of war seemed for some time imminent. On Oct. 21 the Crown Prince and M. Pasitch visited St. Petersburg, and on their return the Crown Prince announced that while he was assured of Russian sympathy, the Servians must fight on their own behalf even if others did not come to their assistance. On Nov. 18 a joint note from the powers was addressed to the Servian government, urging that the troops stationed on the Austrian frontier should be recalled. At the close of the year the prospects seemed favorable to a peaceful adjustment. In addition to the article on the **BALKAN QUESTION**, see **MONTENEGRO**; **AUSTRIA-HUNGARY**; **TURKEY**; and **MACEDONIA**.

SEWAGE PURIFICATION. The campaign against water pollution by domestic sewage and manufacturing wastes (see **SANITATION**) in 1908 was spreading over large sections of the United States. As a consequence, a considerable number of sewage-treatment works were built and many more were projected. The method of treatment most in vogue during 1908 was sedimentation or septic tanks as a preliminary to percolating filters. This held good for new plants in both Great Britain and the United States, the two countries which have taken the lead in sewage purification. In Germany, scientific investigators favor the same methods, but the construction of treatment works there was checked, both in numbers and in degree of purification sought, by a change of policy which laid more stress on purifying water taken from streams than on treating the sewage poured into them. This is a rational view and practice, where large streams are concerned, since the real object of sewage purification at the present day is to prevent offense to the nose and eyes, rather than to convert sewage into drinking water. The latter is as yet wholly impracticable as a general proposition, although quite possible, if expense be utterly disregarded. During 1908 a large sewage purification plant for the city of Columbus, Ohio, was put in operation, and tests on the local sewage of Baltimore and other preparations for a plant to treat the sewage of that city were continued. Both the actual plant at Columbus and the projected one for Baltimore included settling or septic tanks and percolating filters. Besides Columbus, Providence and Worcester, no American city of any size had established sewage purification works, but scores of plants had been built by the smaller cities and towns, by public institutions and by individuals. In Great Britain, nearly all inland towns, large and small, have sewage works, and so have many of the large cities of continental Europe, includ-

ing Berlin and Paris; but this is largely due to the fact that these municipalities are located on small streams, of capacity insufficient to afford dilution. Seaport cities the world over, and in general all cities on streams whose volume of flow is far in excess of the volume of wastes, dispose of their sewage by dilution, perhaps employing rough screens or relatively small sedimentation tanks to remove some of the larger particles of suspended matter, in case offense would otherwise be caused.

The Royal Commission on Sewage Disposal, appointed by the late Queen Victoria in 1898, and which has since been studying sewage disposal questions, published its fifth report in 1908. This report discusses in considerable detail all the present-day methods of treating municipal sewage, compares the costs and advantages of the different methods, and submits recommendations dealing with various phases of the subject. The main general conclusions of the report are that:

"It is practicable to purify the sewage of towns to any degree required, either by land treatment (sewage farms or road irrigation), or by artificial filters (either contact beds or percolating filters), and there is no essential difference between the two processes."

"The main questions, therefore, to be considered in the case of a town proposing to adopt a system of sewage purification are (1) what degree of purification is required in the circumstances of that town, and of the river or stream into which its liquid refuse is to be discharged; and (2) how the degree of purification can, in the particular case, be most economically obtained."

The Commission also concluded that before sewage is put on land or filters it is generally desirable to remove "a considerable proportion of the grit and suspended matters," which may be done by either settling or septic tanks. As between contact beds and percolating filters, the advantages of the latter were held to be the greater. Besides the report just named, two other important publications of 1908 were Raikes' *Sewage Disposal Works* (London and New York), which discusses the subject from the viewpoint of an experienced British engineer; and Dunbar's *Principles of Sewage Treatment*, translated from the German by Calvert (London and Philadelphia, 1908), which is, perhaps, the broadest review of the whole field that has ever been written, and which has the further merit of giving results of German studies and practice which have been hitherto but little known outside of Germany.

SEWERAGE. With the rapidly increasing demand for sewage purification wastes, in order that stream and other water pollution may be stopped, the already strong tendency to construct separate systems of sewerage was gaining ground. By having one system of gathering conduits for house and industrial sewages and another for surface or rain water, it is often feasible to pass the storm water directly to some nearby stream, without purification, thus greatly lessening the amount of sewage to be treated, as well as decreasing some of the complications due to attempting to treat such fluctuating columns of liquid. Ogden's *Sewer Construction* (New York) appeared in 1908. It deals particularly with building sewers, as did *Sewer Design* (New York, 1903), by the same author, with planning them.

SHEEP. See STOCK RAISING.

SHERMAN, JAMES SCHOOLCRAFT. An American member of Congress (Republican), elected Vice-President of the United States in 1908, on the Republican ticket. He was born at Utica, N. Y., on Oct. 24, 1855, graduated at Hamilton College in 1878, and two years afterward was admitted to the bar. In 1884 he became mayor of Utica, and in 1886 was elected to Congress, in which body he has served continuously with the exception of the period 1891-93. Until his nomination for the vice-presidency he was one of the leaders of his party in the House, serving as chairman of the Committee on Indian Affairs, and in 1902 was a candidate for the party nomination as speaker. Because of the candidacy of Sereno E. Payne, also a Representative from New York, however, he withdrew his name. In 1900 he was offered the appointment as one of the appraisers of the port of New York, but, in deference to the wishes of his constituents, declined. The same year he was also prominently mentioned for the Republican nomination as Vice-President. In the campaign of 1908 he served as chairman of the Republican Congressional Committee, paying special attention to the dollar contributions, which, it is said, he solicited at the suggestion of President Roosevelt to offset the then general criticism that the large corporations were financing the campaign. In June, 1908, at Chicago, Mr. Sherman was nominated for the Vice-Presidency by the Republican National Convention, and in November was elected to that office. During the campaign he was charged by the *New York World* with having, in 1901, used improper influence as Congressman to forward the plans of a corporation, known as the New Mexico Lumber and Development Company, which aimed to secure from the Territory of New Mexico certain timber lands for about one-tenth their value. Mr. Sherman in his defense admitted the existence of the New Mexico Lumber and Development Company, and also that he had for a time held stock in it. He denied, however, that government lands were involved, and stated that, after examining the lands in question, he had decided that the venture would not be profitable and the plan was then abandoned and the company dissolved. Mr. E. L. Philipp, treasurer and general manager of the company, also issued a statement in which he said that, as soon as the company found out that the lands could not be secured without violating the law, the project was abandoned.

SHIPBUILDING. During 1908 there was launched from the shipbuilding establishments of the world a total tonnage, both naval and merchant marine, of 2,142,975 tons, representing 1,532 vessels, or all over 100 tons reported to Lloyd Register. This was a smaller amount than for many years, being a reduction of 31 per cent. from the figures of 1907 and 34½ per cent. from those of 1906. These details and others are shown in the accompanying tables. The shipbuilding industry is virtually Great Britain against the world, as that country builds one-half of the ships used in the world's commerce. The largest steamship of the year, the *George Washington*, was built at Stettin for the Hamburg American Line. The turbine continued to be used for high speed passenger and war ships, but there were marine engineers who favored its combination with reciprocating engines to secure the greatest engine efficiency. (See STEAM TURBINE.)

TABLE SHOWING THE TONNAGE OF VESSELS OF 100 TONS GROSS AND UPWARD (EXCLUDING WAR-SHIPS) LAUNCHED DURING THE YEARS 1903-1908

Year	United Kingdom	Austria-Hungary	British Colonies	Denmark	France	Germany	Holland	Italy	Japan	Norway	United States	Other Countries	Total
	tons	tons	tons	tons	tons	tons	tons	tons	tons	tons	tons	tons	No. tons
1903	1,190,618	11,328	34,090	28,009	92,768	184,494	59,174	50,069	34,514	41,599	381,820	35,928	1050 2,145,631
1904	1,205,162	16,645	30,965	15,859	81,245	202,197	55,636	30,016	32,969	50,469	238,518	28,254	1643 1,987,035
1905	1,623,168	16,402	10,798	17,557	73,124	255,423	44,135	61,629	31,725	52,580	302,827	25,554	1578 2,514,922
1906	1,828,343	18,590	26,042	24,712	35,214	318,230	66,809	30,560	42,489	60,774	441,067	26,913	1836 2,919,763
1907	1,607,890	8,717	46,443	28,819	61,635	275,003	66,823	44,666	66,254	57,556	474,675	37,807	1788 2,776,088

TABLE SHOWING THE NUMBER AND DISPLACEMENT OF WARSHIPS OF 100 TONS AND UPWARD LAUNCHED FOR THE VARIOUS NAVIES DURING THE YEARS 1903 TO 1908

Year	British	United States	French	German	Italian	Japanese	Russian	Other Flags	Total
	tons	tons	tons	tons	tons	tons	tons	tons	No. tons
1903	147,813	66,140	30,780	60,590		2,245	8,900	33,450	119 391,100
1904	126,375	170,185	43,600	44,970	25,932	57,200	35,317	21,586	102 435,006
1905	96,506	98,200	28,611	36,487	14,490	41,277	82,204	22,564	118 363,211
1906	85,700	45,443	15,183	62,678	3,039	50,633	15,721	27,448	148 362,972
1907	133,406	11,590	33,594	97,660	29,154	608	1,750	10,151	142 321,211
1908	49,560	52,850	21,600	14,800	25,400	13,917	38,430	47,574	127 308,689

During the fiscal year 1907-1908, according to the Commissioner of Navigation, 1,457 vessels of 614,216 gross tons were built and documented in the United States, compared with 1,157 vessels of 471,332 gross tons for the previous fiscal year. Of the total for 1908 450,017 gross tons were built of steel. The steel construction was thus not only by far the largest in American

history, but it was demonstrated that the capacity of the United States for steel construction had virtually doubled since the fiscal year 1901. The product was over fourfold that of 1899. The Bureau of Navigation reported 1,104 sail and steam vessels of 287,603 gross tons built in the United States and officially numbered during the calendar year of 1908, as follows:

	Wood				Steel				Total	
	Sail		Steam		Sail		Steam		No.	Gross
	No.	Gross	No.	Gross	No.	Gross	No.	Gross		
Atlantic and Gulf.....	120	31,370	358	11,200	3	2,802	31	44,513	512	89,885
Porto Rico	10	111	1	11	.		.		11	122
Pacific	14	650	233	20,141	.		8	13,649	255	34,440
Hawaii			1	14	.		.		1	14
Great Lakes			81	1,578	.		54	156,064	135	157,672
Western Rivers			185	5,300	.		5	170	190	5,470
Total	144	32,131	859	38,244	3	2,802	98	214,426	1104	287,603

During 1908 American shipyards on the Great Lakes launched 39 vessels, of which 24 were bulk freighters, 2 passenger boats, 1 package freighter, 1 Canadian canal freighter, 3 tugs, 3 fire boats, 1 lightship, 2 drill boats, 1 sand sucker, and 1 supply boat. Of these the American Shipbuilding Company launched 18, and the Great Lakes Engineering Works 9, the remainder being distributed among individual yards. In 1907 the record was 56 vessels, of which 40 were bulk freighters, 3 package freighters, 1 passenger steamer, 1 wrecker, 1 lighter, 1 mail boat, 5 tugs, and 4 scows. On the Atlantic coast at Camden, N. J., the *Oklahoma*, 5,853 tons, was launched and was the single large ship over 5,000 tons to be built for the foreign trade and launched in 1908. The *Brazos*, for the Mallory Line, built at Newport News, was put into commission during the year and was the largest of the coastwise ships. She was 418 feet long, 54 feet beam, and 37 feet depth, and 6,399 gross tons, 4,077 tons net, 418 by 54 beam molded, 416x54x37, 10,000 tons displacement, 6,400 tons, load depth 24 feet. The *Commonwealth*, one of the finest inland water vessels ever constructed, was built for the Fall River Line for its Long Island Sound traffic. The *Commonwealth* was 455 feet 2 inches length over all, 55 feet beam molded, 22 feet molded

depth, and 6,410 tons displacement, loaded. She was designed for regular work at 18 statute miles an hour, with sufficient power to make 20 or 22 miles when necessary.

Throughout the British Isles there was a marked decline in the tonnage launched during 1908, which was far beyond even the worst fears at the beginning of the year. This is clearly indicated by the following tables, compiled from statistics in *Engineering*, London:

Aggregate of Production in the United Kingdom		
	1908	1907
Steamers	tons 980,600	tons 1,739,200
Sailing ships	54,200	56,200
Total	1,034,800	1,795,400
His Majesty's Dockyards.....	42,426	51,800
Grand Total	1,077,226	1,847,200
Foreign-owned tonnage	376,600	547,000
Per cent. of total	35	30.4
Total Merchant Tonnage	992,250	1,714,500
Per cent. of steam merchant tonnage to total merchant tonnage	95	96.7
Indicated Horsepower of Engines	1,157,140	1,816,000
Per cent. of all naval tonnage to merchant tonnage	7.5	7.75

Ten large merchant steamers of 10,000 tons and over were under construction in British

shipyards during the year, five of which, building at the shipyards of Harland and Wolff, Belfast, were for the transatlantic service. The largest of these was the Holland-American Liner, *Rotterdam*, of 23,980 tons, after which came the Red Star Liner *Lapland*, 18,565 tons; the White Star Liners *Laurentic* and *Megantic* each of 15,340 tons, built for the Canadian service; and the *Minnewaska*. During the year 22 warships were built for the British navy and 14 for foreign navies, amounting to 74,976 tons and 219,850 indicated horse power, the aggregate value representing £8,235,000. Two ships of the first class or Dreadnought type, the *St. Vincent*, and *Collingwood*, were launched from government yards, while the *Minas Geraes* for the Brazilian navy was being built by Sir W. G. Armstrong, Whitworth and Co., with engines by Vickers Sons and Maxim, Limited. The *Laurentic* is interesting as being designed to combine in her motive power turbines and reciprocating engines, the outside propellers being driven by the latter, while there is a low-pressure turbine in the centre line of the ship.

During the year preparations were made for the construction of two enormous liners for the White Star Line by Messrs. Harland and Wolff at their yard at Belfast, Ireland. These two steamships will be between 900 and 1000 feet in length, of 37 feet draught and of 60,000 tons displacement. The combined horse power of the engines of each ship will be 50,000, and while extreme speed is not aimed at, at least 21 knots an hour will be maintained. Like the *Laurentic* a combination of reciprocating engines and turbines will be used. The construction of these vessels has involved vast preliminary work, including the complete transformation of the berths where the *Adriatic*, *Baltic*, and *Celtic* were built. The gantries, or steel frame work carrying travelling cranes for transporting the material to the place of erection, alone cost in the neighborhood of \$1,000,000.

SHOES. See BOOTS AND SHOES.

SHOOTING. The most important event in the shooting world in 1908 was the international team rifles match, held at Bisley, England, in connection with the Olympic Games (q. v.). The rules of the match provided that each team should consist of six men and that each contestant should be entitled to fifteen shots at 200, 500, 600, 800, 900 and 1000 yards. The weapons used by each team were those of the country each represented. The United States won the match, scoring a total of 2531 points. England scored 2496, Canada 2439, France 2272, Sweden 2231, Norway 2192, Greece 1886, Denmark 1909. The revolver team match was also won by the United States with a score of 1914. Belgium was second with 1868, and England third, with 1816.

The ninth annual United States Revolver Association tournament had 150 entries. Lieutenant R. H. Sayre, N. G. N. Y., won the revolver championship, scoring a total of 462 out of a possible 500. Other results of the tournament were: Pistol championship, J. E. German, San Francisco, and P. Hanford, New York, tied at 468; military revolver championship, C. F. G. Armstrong, San Francisco; military record match, C. F. G. Armstrong. In the matches held under the auspices of the Na-

tional Rifle Association of America, the individual military championship was won by Lieutenant S. A. Harris, with a score of 582. Other winners were: Wimbledon Cup (1000 yards), Captain K. K. V. Casey; president's match, Sergeant A. Brest; Leach Cup, Captain K. K. V. Casey; regimental team championship, Sixth Massachusetts Infantry; regimental skirmish match, Corps of Engineers, U. S. A.; company team match, U. S. Marine Corps. The U. S. Infantry won the national team match, with a score of 3224. The U. S. Navy was second, with 3210, and the U. S. Cavalry third, with 3180. Lieutenant A. D. Rothrock, Ohio National Guard, won the individual match. The intercollegiate out-door championship was won by George Washington University, and the indoor intercollegiate by Columbia.

SHUVALOFF, COUNT PAUL. A Russian soldier and diplomat, died on April 3, 1908. He was born in 1830 and distinguished himself in the Crimean War, afterwards reaching the rank of general. He was ambassador to Berlin from 1885 to 1894 and afterwards governor-general of Poland.

SIAM. An independent kingdom of Indo-China and the Malay Peninsula. In 1908 Siam ceded to Great Britain the States of Kelantan and Tringanu (q. v.) in the Malay Peninsula, embracing an area of about 8000 square miles. The area of Siam is about 238,000 square miles. Its population is between 6,000,000 and 7,000,000. In 1907 there were in the country about 1500 foreigners, including 293 British, 208 Germans, and 200 French. The immigration of Chinese coolies in 1906 and 1907 was 60,120 and 88,691 respectively; their emigration, 40,826 in 1906 and 53,644 in 1907. Bangkok, the capital, has about 500,000 inhabitants, nearly one-half Chinese.

PRODUCTION. Gold, copper, and tin are being mined extensively, particularly tin, which is found in great abundance on the island of Tongkah, or Junk Ceylon, and in other parts of Siamese Malay. In 1905-6 the export of tin metal from Puket, the port of Tongkah, was 4232 tons. The cutting of teak in the northern forests is almost entirely in British hands. In 1906 the export of teak from Siam was 96,837 tons, against 101,397 tons in 1905. The number of teak logs floated down in 1907 was 113,000. In both 1906 and 1907 there was a great decrease in the number of logs got out from the forests. The export of rice, the chief product and staple food, was 917,682 tons in 1906, against 820,864 tons in 1905. The rice crop of 1906 was estimated to be the largest on record, and 1,000,000 tons were expected to be available for export. The export of pepper in 1906 was 2,996,091 pounds, valued at \$300,405; in 1907, 3,307,784 pounds, valued at \$285,277.

FOREIGN COMMERCE. The imports and exports for 1907 amounted to 78,685,000 and 99,730,000 ticals respectively, against 76,004,954 and 110,600,852 ticals in 1906 (the average value of the tical was 31 cents in 1906 and 1907). The decrease in exports in 1907 was due entirely to the falling off in the export of rice. The imports of cotton goods in 1907 were about 1,500,000 ticals' worth in excess of that of 1906. The principal imports are cotton yarn and cotton fabrics, metal manufactures, hard-

ware and cutlery, machinery, petroleum, gunny bags, provisions, sugar, and opium. The exports are mainly rice (86,565,000 ticals in 1907), teak wood (12,789,000 ticals in 1907), fish, hides of buffaloes and cattle, pepper, stick-lac, raw silk, silk fabrics, and birds' nests. The total foreign trade of 1907 showed an increase of about 27,000,000 ticals over the average for the past five years. The trade with the principal countries of origin and destination in 1907 was as follows, in ticals:

From and to	Imports	Exports
Singapore	20,753,000	36,338,000
Hongkong	21,422,000	34,826,000
China	6,126,000	224,000
British India	5,115,000	8,902,000
Great Britain	11,668,000	3,648,000
Germany	4,149,000	746,000

The imports of the United States from Siam in the fiscal year 1907-8 were valued at \$51,858, and the exports of the United States to Siam, \$392,663. Almost the entire oversea trade passes through Bangkok.

COMMUNICATION. In 1907 the ports of Siam were entered by 793 ships of 731,988 tons, and cleared by 790 ships of 734,755 tons. The merchant marine in 1907 consisted of 16 steamers, of 2559 tons, and 112 sailing vessels and junks, of 10,789 tons. The length of State railways in 1907 was 482 miles; of companies' lines, 66 miles. The line from Paknam to Pitsanuloke, 87 miles long, was opened in 1908; it forms a part of the State Northern Railway, and is being extended to Utaradit, 57 miles from Pitsanuloke. The line from Bangkok to Petrin, 40 miles, was opened in 1908. The length of telegraph line in 1907 was 7050 miles.

GOVERNMENT. The form of government is an absolute monarchy. The present king is Chulalongkorn I., who succeeded his father October 1, 1868. A Legislative Council, composed of Ministers of State and others appointed by the king, was created in 1895. The country is divided into 18 provinces, each under a High Commissioner, under whom are the governors of districts. The Laos, or Shan, states of the north, and the Siamese Malay states retain a certain measure of independence. They are administered by native Rajahs, but Commissioners with full powers of control are now sent regularly from Bangkok to most of these tributary states. Of late years the power of the Central Government has greatly increased at the expense of feudal and provincial independence, due mainly to the development of means of communication. The legal code and the administration of justice in the native courts have been somewhat modernized with the assistance of foreign advisers to the Ministry of Justice and Legislative Council. Consular courts exercise jurisdiction over their nationals, and an international court tries suits between foreigners and natives. The metropolitan police is under British-Indian officials, and the provincial gendarmerie is under a Danish inspector-general, assisted by a number of Danish instructors. The Finance Department has a British Financial Adviser, and numerous Europeans, particularly

British, are employed in the various administrative departments.

FINANCE. The budget for 1907-8 estimated the revenue at 50,261,170 ticals and the expenditure at 56,261,524 ticals. The principal sources of revenue were estimated as follows: Opium tax, 8,989,758 ticals; spirit tax, 4,132,963; lottery and gambling, 6,618,548; land and fishery taxes, 7,330,175; customs, 5,340,700; forests and mines, 2,200,338, posts, telegraphs, and railways, 4,337,345; capitation tax, 3,806,329. The opium, spirit, and gambling taxes are farmed. The gambling houses in the provinces have been suppressed, and the suppression of those in the capital depends upon the consent of the Treaty Powers to an increase of the customs tariff, in order to make up the loss in revenue from the gambling tax. The principal estimates of expenditure were: Civil list, 7,000,000 ticals; war, 14,231,620; local government, 3,741,452; worship and instruction, 1,475,307; public works, 3,570,570; agriculture and mines, 3,505,435. The national debt amounted in 1908 to £4,000,000, contracted mainly for railways. The paper currency on March 31, 1907, was 15,209,170 ticals.

ARMY AND NAVY. Military service is obligatory in many of the provinces between the ages of 18 and 40, active service being required for 2 years with the colors, then 10 years in the first, and 10 years in the second reserve. It is intended to extend this system to the rest of the kingdom. Numerous exemptions are allowed, as in the case of priests, civil officials, students, orphans, slaves, uncivilized tribes, etc. The peace strength of the army is about 1000 officers and 20,000 men. The main reliance is the marine infantry, recruited from the marine provinces, which numbers 15,000 men of all grades, with an additional 5000 in reserve. Every effort is being made to increase the army and improve its drill and efficiency. The navy consisted at the beginning of 1908 of 1 unprotected small cruiser, of 2440 tons, and 7 gunboats of 4110 tons. Forts at Paknam protect the mouth of the Menam.

SIERRA LEONE. A British colony and protectorate in West Africa. The colony is along the coast, with an area of 4000 square miles and a population (1901) of 76,655 (444 Europeans). The protectorate, extending inland for 180 miles, has an area of 30,000 square miles and a population of 950,000. Freetown, the capital, has the best harbor on the West African coast and a population (1901) of 34,463. The products include palm-kernels, palm-oil, kola nuts, earth nuts, india rubber, rice, gums, wax, etc. Ramie is cultivated on a comparatively large scale. Ginger, hitherto confined to the colony, has been introduced into the protectorate, where the crop proved of better quality. The export of cotton in 1907 was 13,006 pounds, against 87,805 pounds in 1906. The total imports in 1907 amounted to £988,022; the total exports, £831,259, of which £675,544 were domestic exports. The leading imports were: Cotton goods, £250,846; provisions and foodstuffs, £87,291; beverages, £70,243; coal, haberdashery, hardware, and tobacco. The leading exports of domestic produce were: Kola nuts (1374 tons), £113,674; palm-kernels (34,942 tons), £447,801; palm oil (615,997 gallons), £51,154; rubber (73 tons), £22,480. The

imports from and exports to Great Britain amounted to £708,765 and £195,159 respectively; Germany, £111,103 and £350,720; British West African colonies, £22,745 and £47,719; foreign West African colonies, £68,635 and £77,652; United States, £25,743 and £370. There are over 226 miles of railway. The revenue and expenditure in 1907 were £359,104 and £345,567 respectively. The Governor in 1908 was H. E. Leslie Probyn.

SILK. The year 1908 in the silk industry in America as well as abroad was in striking contrast to 1907, taken as a whole. In the United States, both in manufacturing and in trade in raw and manufactured silk, there was a period of intense depression following the panic of 1907. The number of new factories to be erected was the smallest in six years, and where prices for raw silk in the previous year had been the highest on record, represented by quotations in April of \$6.10 and \$6 a pound for Double Extra Kansai and Sinshiu No. 1 filatures, two widely used varieties, there were recorded in the same month of 1908 the lowest prices in years, namely, less than \$3.70 and \$3.40 for the same varieties. As silk is essentially a luxury it is one of the first commodities to feel the effects of hard times, and it was the general belief, strengthened by the gradual improvement in trade conditions, that the depression, in so far as it concerned the American silk industry, was of a temporary character, and that the manufacturing business was soundly established and in good shape, despite the small growth in new mill construction for the year. The total number of new mills since 1903 has been as follows: 1903, 58; 1904, 49; 1905, 53; 1906, 36; 1907, 51; 1908, 32. The new mills of 1908 were constructed in Connecticut, Missouri, New Jersey, New York, Pennsylvania, and Rhode Island and their respective distribution is shown by the accompanying table.

NEW SILK MILL CONSTRUCTION, 1908

	Conn.	Mo.	N. J.	N. Y.	Penn.	R. I.

Total.....	3	1	13	3	9	3

The status of the industry at the end of 1908 may be appreciated by the fact that according to *Davison's Silk Trade* there were in the United States 1118 firms or corporations engaged in the manufacture of silk as compared with 1180 at the close of 1907, and of these 350 were broad silk mills as against 338 in 1907, 141 were ribbon plants as against 133 in 1907, and 151 were throwing plants as against 147 in the previous year. The depression of the United States was shared by Europe and the East, and the production of Japan in particular was put upon a very weak market. There was a considerable demand in the latter half of the year for the better grades from Italy to be used in making satin piece dyes. The accompanying table gives the estimates of the Amer-

ican Silk Association for the crop of 1908-9 as compared with that of previous years:

Crop of (in Kilograms)	1908-9 (Estimated) Kg.	1907-8 Kg.
Europe	5,805,000	5,917,000
France	655,000	662,000
Italy	4,720,000	4,870,000
Austria	360,000	360,000
Spain	70,000	75,000
Levant	2,550,000	2,931,000
Asia: Total Production Ex- ported*	11,690,000	11,991,000
China, Shanghai.....	3,150,000	3,100,000
Canton	1,900,000	2,250,000
Japan, Yokohama	6,300,000	6,301,000
Bengals	340,000	340,000
Total, Kilograms	20,045,000	20,839,000
Tussah, Raw	1,000,000	902,520
Grand Total, Kilograms..	21,045,000	21,741,520
Grand Total, Reduced to Pounds	46,395,807	47,931,311

*The production of raw silk in China is an absolutely unknown quantity.

†Excludes Tussah silk.

The figures for Asiatic silks are the actual shipments from the various countries of production, viz.: China, Canton, Japan, etc.

The estimated supplies for 1908-1909 are the probable crops for the season, plus the stock on hand carried over from the previous season.

The domestic consumption of Japan is estimated to be approximately 40 per cent. of her production. The remaining 60 per cent. which is exported, being, say, 6,301,000 kilos in 1907-1908 season, the total production equals the export divided by 60 and multiplied by 100, which therefore amounts to 10,501,666 kilos.

The domestic consumption of China is estimated to be 55 per cent. of her production in average years. The remaining 45 per cent. which is exported, being 6,252,520 kilos; from Shanghai, Canton, and Tussah, in 1907-1908 season, the total production equals the export divided by 45 and multiplied by 100, which therefore amounts to 13,894,488 kilos.

The silk industry in the latter half of 1908 was greatly aided by the fact that fashion prescribed an increased use of silk fabrics and styles of women's dress that could only be realized in silks and satins so that a particular impetus was given to business along with the general trade recovery. In the discussion of the revision of the tariff the silk manufacturers asked that a specific duty be substituted for the ad valorem duty of the Dingley tariff. In the conditioning, that is drying to obtain the absolute weight, there was a demand for more scientific methods and skill and during the year the development of laboratories and establishments to improve the technique of silk treatment was quite a feature. A combination of the skein silk dyeing interests occurred early in December and the National Silk Dyeing Co., with \$10,000,000 capital stock, was formed. The new corporation, which included the largest plants in the trade with two exceptions, aimed to secure greater economy in the purchase of materials and the execution of orders, but otherwise no changes in the operation and management of the constituent plants were contemplated.

SILVER. The silver-mining industry of the United States during 1908 presented a far less

satisfactory condition than that of gold owing to the low prices for silver, lead, copper, and zinc, and as a result there was a substantial decrease, 8.3 per cent. in quantity and 25.8 per cent. in value, from the production of 1907. Furthermore the output for 1908, with the single exception of that of 1894, was the smallest since 1889. During the year the large smelters of Utah and Colorado were partly closed, and partly operated on a reduced capacity. Important mines in Leadville, Aspen, Creede, and Park City, operating on low-grade ores, found it very difficult to make profits on ore of the same grades that yielded well in 1906 and 1907, and were therefore compelled to reduce their output or to close. Owing to temporary lack of demand from India, where purchases during past years have been large and have steadily increased, the silver market declined almost steadily from about 56 cents per ounce in the early part of the year, to about 48 cents in December, the average price being about 53 cents. The year closed with New York prices at 50 cents. The extraordinary heavy production of the cobalt district in Canada, which for 1908 exceeded that of any one State in the United States and was believed to approximate 17,000,000 ounces, undoubtedly contributed to the depression in the price of silver. The statistics of the Geological Survey for the mine production in 1907, amounted to only 52,500,104 fine ounces, whereas the refineries and the mints reported 56,514,700 fine ounces, so that the shortage in the mine output for the last months of 1907 was naturally reflected in the refinery returns for 1908 and was accentuated by still further reduction in the production of the mines. The production of silver in 1908 from domestic sources was estimated by the Director of the Mint at 51,798,053 fine ounces, valued at \$27,452,861.

New York, cents per fine ounce; London, pence per standard ounce.

The accompanying table giving the statistics of the United States Geological Survey and the Director of the Mint shows that only in Nevada was there a marked increase in silver production in 1908, and that in addition Montana and Arizona were the only other States to show any increase at all over 1907, which was due to the large output of copper ores containing silver. Heavy decreases occurred in Colorado, Idaho, and Utah, due in the case of the first two to poor conditions and low prices in the silver-lead industry and in Utah to difficulties connected with the closing of three smelters by the Federal Court on account of smoke damage.

The exports of silver from the United States for the calendar year ending December 31, 1908, were \$51,837,671 as compared with \$61,625,866 in 1907. The imports for the same periods were \$42,224,130 and \$45,912,360, respectively, or an increase of exports over imports of \$9,613,541 in 1908, and of \$15,713,506 in 1907.

SINGLE PHASE ELECTRIC RAILWAYS.
 See ELECTRIC RAILWAYS.

SKATING. The national championships were contested for at Verona Lake, N. Y., on February 22. W. Sutphen, Brooklyn, N. Y., won the mile in 3m. 11.2-5s. and the three-mile in 10m. 38s. The one-mile novice race was won by G. V. Conniff, New York, in 3m. 38s., E. A. Leach, Newark, N. J., won the two-mile handicap, and the Verona Lake Skating Association won the two-mile relay. At the Eastern amateur championship meeting at Orange Lake, N. Y., February 12, E. Lamy, Saranac Lake, won the quarter-mile, half-mile, one-mile and five-mile races. Lamy's time in the quarter, 35 1-5s, equalled the record. The international indoor championship events were held at Pittsburg, February 5-6, E. Lamy winning the quarter-mile in 40s., the one-mile in 2m. 44s., lowering the record by 9s., and the two-mile in 6m. 11.4-5s. F. Robson, Toronto, won the half-mile in 1m. 19.4-5s. In the five-mile race A. Anderson, Chicago, lowered the old record of 15m. 9s. to 15m. 7.3-5s. The amateur championships of Europe were decided at Klagenfurt, Austria, in February. M. Osholm, Stockholm, won the 500-metre race in 47 1-5s., the 5000-metres in 9m. 1 1-5s., and the 10,000-metres in 18m. 24s. O. Mathieson, Christiania, won the 1500-metres in 2m. 29.2-5s. At the international championships at Davos, Switzerland, two new world's records were made, Wikander of Helsingfors winning the 500-metres in 44 2-5s., and O. Mathieson the 1500-metres in 2m. 20 4-5s.

SKYSCRAPERS. See ARCHITECTURE and TALL BUILDINGS.

SLAUGHTERING. See MEAT and MEAT INSPECTION.

SLEEPING SICKNESS, OR TRYPANOSOMIASIS. This disease originally endemic in a small area on the West African coast, by 1908 had spread over a great part of the continent. From the Sudan to the Cape, and from the Congo States to German East Africa, immense districts had been devastated. The disease attacks the natives generally, but the white man is by no means immune. It is due to an animal parasite, *Trypanosoma gambiense*, discovered by Nepren in 1898, and is conveyed from animal to animal and from animals to man by the tse-tse fly (*Glossina palpalis*). Preventive measures on a great scale were instituted by the English government and to a less extent by the French and Germans, all of whom, during 1908, were working under a mutual agreement. Publications, both scientific and popular, were being disseminated, and in the centres of infection hospitals, laboratories and experiment stations were being established. Villages were moved away from the river banks, infected populations were prevented from migrating, the sick were segregated in lazarets, from which healthy natives were kept away. Everywhere the colossal undertaking was being pushed rigorously. Atoxyl, an arsenic derivative which, it was hoped, would prove a specific against this disease, has not been satisfactory, because the trypanosomi soon become immune to its action. See UGANDA.

SMALL ARMS. See MILITARY PROGRESS.

SMALLPOX AND VACCINATION. The value of vaccination as a prophylactic against smallpox was illustrated anew by the experiences of the United States in its insular possessions, Porto Rico and the Philippines. After the possession of Porto Rico passed over to the United States, during the epidemic of smallpox the government performed over 800,000 vaccinations, and

in four months the disease was abolished. In the annual report of the chief of the sanitary department in the Philippine Islands it was shown that in seven provinces there had been for a number of years an annual death rate of 6000 from smallpox, an estimated number of 25,000 to 30,000 cases in all. In the year following the institution of general vaccination in those seven districts there were no deaths whatever from this disease. At a meeting of the Philadelphia County Medical Society, Schamberg reviewed the history of smallpox. He said that the disease was as prevalent among the people of Europe in the eighteenth century as measles is at the present time. The mathematician, Daniel Bernouilli, calculated that fifteen millions of human beings died of smallpox in 25 years. Vaccination has totally changed the age period of smallpox. It is exceedingly rare for a successfully vaccinated child under five years old to die of the disease, and such deaths are uncommon in children under ten who have been properly vaccinated. It is a noteworthy fact that the decline in the death rate of smallpox, as shown in the carefully kept records of England and Sweden, has been limited to persons below the age of 15 years, i. e., the age when the preventive effects of a first vaccination have not worn off. See VITAL STATISTICS.

SMITH, CHARLES EMORY. An American journalist and public official, died in Philadelphia on January 19, 1908. He was born in Mansfield, Tolland County, Conn., on February 18, 1842; graduated at Union College in 1861, became a member of General Rathbone's staff in that year, and for two years was in the recruiting branch of the service. In 1865 he became editor of the *Albany Express*, a position which he held until 1870, when he became associate editor of the *Albany Journal*, where he remained for ten years, during the last four years as editor-in-chief. Meanwhile he had been a delegate to several of the Republican State Conventions, and to the National Republican Convention of 1876, for which he wrote much of the platform. He became editor of the *Philadelphia Press* in 1880, and held that position during the remainder of his life. He was minister to St. Petersburg in 1890-92, and in this position directed the distribution of American contributions of more than \$100,000 for the relief of the famine in Russia during those years. He took an active part in the presidential campaigns of 1892 and 1896, drafted much of the Republican platform in the latter year, and became postmaster general in President McKinley's cabinet in 1898. During his administration the rural free delivery was organized. Soon after President McKinley's death he resigned, but remained in charge of the department until his successor took charge, in January, 1903.

SMITH, JOHN WALTER. An American politician, was elected to the United States Senate as a Democrat by the Maryland Legislature on January 15, 1908, for the term beginning March 4, 1909. After the death of Senator William P. Whyte, he was, on March 24, elected to serve out the unexpired term to March 3, 1909. He was born in Snow Hill, Md., on February 5, 1845, and has had an active career in lumber and other business and politics. He was a State

Senator from 1889 to 1899, member of Congress in 1899, and Governor of Maryland from 1900 to 1904. See MARYLAND.

SMITH, WALTER CHALMERS. A Scotch poet and minister, died on September 19, 1908. He was born in Aberdeen on December 5, 1824, and was minister successively of Presbyterian churches in London and Glasgow, and of the United Free High Church in Edinburgh. In 1893 he was chosen moderator of the United Free Church in Scotland. His writings include: *Bishop's Walk* (1861); *Olrig Grange* (1872); *Kildrostan* (1884) and *A Heretic* (1890). His collected works were published in 1903.

SMITH COLLEGE. An institution for the higher education of women at Northampton, Mass., founded in 1875. In 1907-8 the attendance was 1482, and in the autumn of 1908, 1566. Arrangements have been made for the erection of additional buildings, including an assembly hall and two dormitories. The endowment of the college is \$1,300,000, and its annual income approximately \$200,000. The president is the Rev. L. C. Seelye.

SMITHSONIAN INSTITUTION. An institution established in 1846 in accordance with the provisions of the will of James Smithson, an Englishman, who bequeathed his fortune to the United States for the increase and diffusion of knowledge. The present Institution has administrative charge of several branches, which were developed by its early activities and are now supported by Congressional appropriations. These are the National Museum, the International Exchange Service, the Bureau of American Ethnology, the National Zoological Park, the Astrophysical Observatory, and the Regional Bureau for the International Catalogue of Scientific Literature. The Smithsonian issues three regular series of publications: *Contributions to Knowledge*, the *Miscellaneous Collections*, and an *Annual Report*. The *Proceedings and Bulletins* of the National Museum, the *Reports and Bulletins* of the Bureau of American Ethnology, and the *Annals* of the Astrophysical Observatory are issued under the auspices of the Institution. Investigators are aided by grants for original research to the extent of the funds available for the purpose. In 1907-1908, the Institution conducted researches in geology, paleontology, meteorology and botany; it appropriated funds for a recalculation of the atomic weights; aided an investigation on the properties of matter at the temperature of liquid air; from its Hodgkins Fund it furthered studies on the relation of the atmosphere to the welfare of man, and, in connection with the International Congress of Tuberculosis, offered a Hodgkins prize for the best essay on the relation of atmospheric air to tuberculosis, its cause, prevention, and cure. For fifteen years it has supported a table in the Naples Zoological Station and offered its facilities to biologists prepared to avail themselves of this opportunity to conduct original research. It was announced in December, 1908, that the party which was to accompany President Roosevelt on his trip to Africa would be acting as representatives of the Institution, which would defray the expenses of its members. The income of the Institution proper during the year

1907-1908 was \$63,372.90. The Secretary of the Institution is Charles D. Walcott; Assistant Secretary, in charge of the United States National Museum, Richard Rathbun. See NATIONAL MUSEUM.

SMOKE PREVENTION. Efforts to keep the atmosphere of American cities free from smoke continued to be made in 1908. The most intelligent and effective of these efforts were directed towards the selection of new, and the improvement of old, boiler furnaces, and towards the education or control of firemen, all to the end that coal may be properly burned. The University of Illinois, at Champaign, issued a bulletin on *How to Burn Illinois Coal Without Smoke*. This bulletin would apply equally well to similar soft coals from other sources. The substitution of electric for steam locomotives at great terminals, as was done at New York by the New York Central and the New Haven railroads, and as may be expected at a few other points, will aid materially in reducing a serious portion of the smoke nuisance in great cities. Electric equipment was proposed and in part accepted for the roads entering Chicago, and was under consideration at Boston. There were, however, strong reasons for believing that the change from steam to electric traction for railways, even at important terminals, would be slow for some years to come.

SNOW, FRANCIS HUNTINGTON. An American educator and scientist, died on September 20, 1908. He was born in Fitchburg, Mass., on June 29, 1840, and graduated at Williams College in 1862, and at the Andover Theological Seminary in 1886. He was professor of mathematics and natural science at the State University of Kansas in 1886, and of natural history in 1870-89, when he became president. In 1890-1901 he was chancellor of the university, and after 1901 he was professor of organic evolution, systematic entomology and meteorology. In 1885 the Kansas Legislature appropriated \$50,000 for a building, to be called Snow Hall, and to contain his collection of more than 22,000 insects, gathered by him in twenty-six expeditions to Kansas, Colorado, New Mexico, Texas and Arizona.

SOCIALISM. The extent to which compromise with other political parties is permissible, the question which has so often agitated Socialists, was a leading subject of discussion in 1908. In France and Germany it gave rise to bitter controversies and in the latter country threatened a permanent division in the ranks.

GERMANY. The persistence of the South German Socialist deputies in voting the budgets in the respective Diets of Württemberg, Hesse, Baden, and Bavaria brought down upon them the anger of their fellow Socialists north of the Main. Whether Socialists in the face of a capitalistic society should compromise with the enemy to gain their ends or maintain constantly an open war was the chief question of international Socialism, and had been discussed in all the congresses. The dominant Marxist element was opposed to all forms of compromise and opportunism and at the Congress of Lübeck in 1901 had insisted that Socialist members of the Landtags were bound in loyalty to refuse on principle, save in certain altogether exceptional cases, to vote the budgets. In South Germany, however, where a more democratic régime pre-

valled, the deputies of the Landtags had already gained a power that Prussian Socialists were far from possessing. It seemed absurd to them that after urging reforms they should refuse to vote the budgetary measures necessary to give them effect. At a recent meeting at Stuttgart they decided to disregard the Lübeck decision. The Central Committee of the party and its official organs, *Vorwärts*, and the *Leipziger Volkszeitung* were roused to a high pitch of indignation against this South German heresy and violation of party discipline. In spite of rebukes and warnings nine Socialist deputies in the Baden Diet voted the financial law in August, only two abstaining; and the Bavarian deputies in their turn voted the entire budget. The Baden Socialists defended their action on the ground that the measure for which they voted increased the wages of workmen. Herr Seglitz, one of the Bavarian deputies, justified the vote as in the interest of general culture and pointed to the progress of democracy in Bavaria as shown by the direct electoral right, the proportional system for election and the recognition of equal rights for Socialists. He declared that in voting the budget they did not assume responsibility for the government's policy. This was denounced in the severest terms in the orthodox press and at Socialist meetings in Berlin. On the other hand, a meeting at Nuremberg unanimously approved the action of the deputies, who moreover were sustained by their constituents. At the annual conference of the party no actual schism took place but it was evident that the two wings were growing further apart. The majority of northern delegates passed a vote of censure against the South Germans who voted the budget.

In 1907 the Prussian Socialists decided on a vigorous campaign for universal suffrage in the Landtag elections. On Jan. 10, 1908, Chancellor von Bülow announced his refusal of electoral reform and on Jan. 12 occurred a Socialist demonstration near the palace of the Landtag resulting in a conflict with the police. In spite of the obstacles which the three-class system of elections put in the way of Socialist representation, the Socialists won a notable success in the June elections and for the first time Socialist deputies were returned to the Landtag. See GERMANY, paragraphs on *History*.

FRANCE. In France the question of compromise with capitalism was raised in the case of M. Breton, a Socialist deputy belonging to the Broussist group who had voted the budget in spite of the decision of the Congress of Limoges against that course. On Jan. 19, the National Council in Paris decided to propose his exclusion at the approaching Congress of Toulouse, for violating his party faith by this act and by his advances toward the bourgeois political groups. M. Breton argued that a systematic refusal to vote the budget was not enjoined by Socialistic principles and that its effect was to deprive Socialists of all influence in the Chamber, and he pointed to the course of South German deputies in voting the budget, in spite of the decisions of congresses. Similar discussion arose a little later when the names of six Broussist deputies, including MM. Brousse and Breton, appeared on an appeal to the electors issued by the Combists in their endeavor to form a bloc. They were accused of giving up the principle of class combat, breaking faith with their party, and identifying socialistic

anti-militarism with anti-patriotism. "Peace among nations; war between classes," was expressly included in the manifesto of the National Council, which had declared that in electioneering the party must in the first instance act independently and that secondarily its course must be guided by republican interests, but it must openly proclaim the principle of class conflict. Hard and fast lines, however, could not be drawn. Alliances with Radicals had been authorized. In the weakness of the party coalitions were unavoidable. The International Congress of 1900 had forbidden alliances that carried with them a fusion of tactics and policy, but permitted transitory alliances that reserved autonomy.

The May municipal elections went on the whole decidedly against the Socialists. The official journal of the party, the *Socialiste*, said on May 31, "The positive check which we have just suffered shows that not only the great part of the French public remains closed to socialism, but also that we have not even won over the industrial workers of the large cities. That is the fact that plainly appears from the last ballots. We have been beaten and seriously menaced in districts almost exclusively industrial. . . . There are urgent reasons for believing that concentration against the Socialists will strengthen as the organization of the proletariat gains in power and activity." The elections showed a tendency on the part of the other parties to unite against the Socialists. The defeat added strength to the charge of the trades unionists that parliamentary Socialism played an inferior rôle.

May 1 passed off quietly, despite the agitators in the Confederation of Labor (see FRANCE, *History*; also STRIKES and TRADE UNIONS), who had caused the government grave anxiety. The programme of the Confederation of Labor divorces it absolutely from parliamentary socialism. It opposes action in Parliament or elections, favoring only the direct action of the working class, looks to a revolutionary strike, and insists on complete autonomy. May 1 was the occasion of some comparisons between the existing conditions and those of 19 years before when the anniversary of the Revolution was celebrated. Then French Socialists were only a handful and the workmen had hardly begun to form unions. Now France counted over a million Socialist votes and 800,000 union workmen; Germany three and a quarter millions of Socialists and two millions enrolled in the unions; Austria under the new franchise had 87 Socialist deputies, and similar progress was shown in other countries.

ENGLAND. The Labor party, which had 31 members of Parliament, had refused until 1908 to commit itself as a body to Socialist principles. The eighth annual conference of the Labor party was held in January at Hull, and at length it definitely pronounced its socialistic aims. By a vote representing a popular majority of 541,000 to 469,000, it carried the following resolution: "That in the opinion of this conference the time has now arrived when the Labor party should have as a definite object the socialization of the means of production, distribution and exchange, to be controlled by a democratic state in the interest of the entire community, and the complete emancipation of labor from the domination of capitalism and landlord

ism; with the establishment of social and economic equality between the sexes." In June, 1908, the Federation of Miners voted for affiliation with the Labor party, which thereby gained thirteen members of Parliament, making a total of 44. The Independent Labor party, of which Mr. Keir Hardie was the first president, forms the Radical wing of the Labor party and has taken an active part in its councils. At its congress at Huddersfield it declared for the right to labor; for the nationalization of land with extensive expropriation in the meanwhile, and the application of the earnings of municipal enterprises to the purchase of land; and against the sweating system. It protested against the *entente* with Russia and declared that in view of the naval rivalry between Germany and Great Britain workmen of both countries should oppose any increase of the naval budget. It discussed the case of Mr. Victor Grayson, a candidate of the Independent Labor party and the first member returned to Parliament as a Socialist. It was a question of his sitting with the Labor party. He finally agreed to do so provided it did not preclude his acting in Parliament and elsewhere as a Socialist. The Social Democratic Federation, a Marxist body, doctrinaire, revolutionary, but of little weight in politics held its congress at Manchester. It refused to unite with the Labor party in spite of the efforts of its leaders, Mr. Hyndman and Mr. Quelch, saying it would amount to a desertion of its colors.

For the Socialist movement in the United States, see PRESIDENTIAL CAMPAIGN, and for an account of Socialistic activities in other countries in so far as they form an important part of the parliamentary record of the year, see the articles on countries.

SOCIAL SERVICE, AMERICAN INSTITUTE OF. A society organized in 1898 with the following purposes: First, to gather from all possible sources, facts of every kind which bear on social and industrial betterment; second, to interpret these facts by ascertaining their causes and effects, thus gaining their real significance; and third, to disseminate the resulting knowledge for the education of public opinion. Inquiries are invited from all who wish to profit by the experience of others. The service of the Institute is free. It has no endowment and depends for its support on those who are interested in it. The officers in 1908 were as follows: President, Josiah Strong, D. D.; Vice-President, Warner Van Norden; Honorary Director, James Dangerfield; Treasurer, John T. Perkins; Recording Secretary, Dr. Washington Choate. The headquarters of the Institute are at the Bible House, Astor Place, New York City.

SOCIETY OF CHEMICAL INDUSTRY. See CHEMISTRY, INDUSTRIAL.

SOCIOLOGY. At the third annual meeting of the American Sociological Society at Atlantic City in the December holidays, the general subject of discussion was "The Family in Modern Society." In a consideration of the topic, "How Do Home Conditions React Upon the Family?" Mrs. Gilman showed that the development of markets and factories has taken from housewives most of their previous economic functions. This change brings it about that women must become income earners outside the family or throw the entire burden of family

support upon the husband. Professor Zueblin maintained that woman's economic dependence prevents the attainment of a spiritual equality of the sexes. Dr. Rubinow held that, while married women of the middle class might be justified in seeking industrial employment, married women of the wage-earning class can best promote family welfare by attending strictly to home employment. In the topic, "Social Diseases and the Family," Dr. Morrow showed in an impressive manner the part played by venereal diseases in the dissolution of families and the increasing number of divorces. The discussion called out several suggested remedies. In a joint session with the American Economic Association (q. v.), in which papers on the Pittsburg Survey (See CONGESTION OF POPULATION) were presented, was made clear the almost complete dominance of the structure and life of the family by economic forces. On the question of the relation of higher education of women to the family, the consensus of opinion was that college education does not to any extent prevent the undertaking of the responsibilities of motherhood. But on the question of the effect of the entrance of women into industry, it was shown that reactions unfavorable to motherhood and to the stability of the family were developed. Another question discussed was, "Has the Freer Granting of Divorce Proved to Be an Evil?" This was considered from many sides, the various views arousing keen interest. In this discussion the welfare of the children and of society dominated that of the divorced persons.

The literature of the year included several general works from well known authors: *Sociologie: La structure générale des sociétés; T. III, Théorie des frontières et des classes*, by G. de Greer; *Sociologie: Untersuchungen über die Formen der Vergesellschaftung*, by G. Simmel; *Social Psychology: an Outline and Source Book*, by E. A. Ross; *The Physical Basis of Civilization: a revised version of "Psychic and Economic Results of Man's Physical Uprightness,"* by I. W. Heineman; *Rise of Man*, by C. R. Conder; *Essay on Western Civilization in its Economic Aspects*, by W. Cunningham (2 vols.); *Origin and Development of Moral Ideas*, vol. 2, by Ed. Westermarck; *The Process of Government: a Study of Social Pressures*, by A. F. Bentley. On the subjects of marriage and the family may be mentioned *Consanguineous Marriages in the American Population*, by G. B. L. Arner; *Ideal Family*, by W. M. Hatch; *L'évolution de mariage*, by P. Abram. Works mainly in the field of anthropology or ethnology but of interest to sociologists were: *Primitive Secret Societies: a Study in Early Primitive Societies*, by Hutton Webster; *Palaces of Crete and Their Builders*, by Angelo Mosso; and *World's People: Their Bodily and Mental Characters, Beliefs, Traditions, Political and Social Institutions*, by A. H. Keane. Other special works of interest were: *The Principles of Anthropology and Sociology in Their Relation to Criminal Procedure*, by M. Parmelee; *Aspects of Religion*, by E. G. Earp; *La loi*, and enlarged edition of a standard work; *Social Aspects of Religion*, by E. G. Earp; *La loi. Essai sur la théorie d'autorité dans la démocratie*, by M. Leroy. There should be mentioned also the *New Encyclopedia of Social Reform*,

edited by W. D. P. Bliss. Not the least important of the new publications of the year was the appearance in January of the first number of *The Sociological Review*, a quarterly, published by the Sociological Society of London, and edited by Professor S. T. Hobhouse. This periodical takes the place of the "Sociological Papers" published in previous years. It is expected to place the society on a more permanent basis and to make more readily available the results of sociological inquiry. It includes "Articles" on the scientific, philosophical and practical phases of sociology; "Discussions," and "Book Reviews."

For classified lists of periodical literature see guides to periodical literature, *The Economic Bulletin*, and *The American Journal of Sociology*.

SOILS. At the conference on the conservation of natural resources held on invitation of the President of the United States at the White House May 13-15, 1908, and at subsequent hearings of the National Conservation Commission appointed by the President as an outcome of the conference, special emphasis was laid on the great waste of the soil resources of the United States and the fundamental importance of soil conservation. The President in his opening address to the conference classed the soil among those resources "which can not only be used in such manner as to leave them undiminished for our children, but can actually be improved by wise use." James J. Hill, in an address at the conference, stated that by soil erosion "millions of acres, in some places to the extent of one-tenth of the entire arable area, have been so injured that no industry and no care can restore them. Far more ruinous, because universal and continuing in its effects, is the process of soil exhaustion." Notwithstanding the wide prevalence of such conditions, the value of the farm products of the United States in 1908 was, according to the report of the Secretary of Agriculture, \$7,778,000,000. It was true, however, that the growth of agricultural production to these magnificent proportions had been largely due to rapid extension of the productive area, and that, following the historical development of agriculture in a new country, extension of productive area had been followed by diminishing yields per acre. As the limit of profitable extension of the productive area and of soil exploitation was approached increased attention was given to improved methods of increasing the productivity of the soil with the result that during the ten years before 1908 there was a general increase in the production per acre of farm lands in the United States. The improvement of methods resulted in large measure from the more thorough knowledge gained during that time, through the work of the United States Department of Agriculture and of the agricultural colleges and experiment stations, and similar institutions, of the nature, possibilities and adaptations of soils. Investigation during 1908 made important contributions to such knowledge. The Bureau of Soils of the United States Department of Agriculture continued the systematic soil surveys begun in 1899, in anticipation of the necessity for more intensive handling of the farm lands of the United States. Up

to June 30, 1908, a total area of 157,078 square miles, or 100,529,920 acres in forty-four States and two territories had been surveyed and mapped. The surveys in 1908 included numerous studies of each important geographical and agricultural district and took account not only of the character of the soil but also of their crop adaptations. They were thus designed to be useful not only to those already on the land but also to those seeking land. Several States carried on local soil surveys, usually under the direction of their agricultural experiment stations, and an active interest was also shown in soil surveys in a number of foreign countries. Some of these were intended to aid in improving methods of handling and cropping soils, others to furnish a basis for land valuation and taxation.

The activity in soil surveying was accompanied by corresponding activity in scientific investigations on soil classification and on soil fertility and productiveness. These investigations confirmed the earlier conclusion that soil fertility can not be simply defined but is the resultant of the complex interplay of physical, chemical and biological processes still imperfectly understood. The Bureau of Soils and others reported important investigations on the nature of the soil solution and on the absorptive power and processes of soils.

SOLAR SYSTEM. See **ASTRONOMY.**

SOLOMON ISLANDS. A group of islands in the Pacific, east of New Guinea. For the German portion of the islands see **GERMAN SOLOMON ISLANDS.** The British protectorate includes Guadalcanar, Malaita, San Cristoval, New Georgia, and other islands, with an area of 8357 square miles, and 150,700 inhabitants (over 200 Europeans). Cocoanuts, pineapples, bananas, and sweet potatoes are produced. Imports and exports in 1907 were £49,252 and £51,602, respectively. Revenue and expenditure in 1907-8 were £7430 and £5923. The resident commissioner is subordinate to the high commissioner for the western Pacific. In 1908 he was Ch. M. Woodford.

SOMALILAND. See **BRITISH SOMALILAND, FRENCH SOMALILAND, AND ITALIAN SOMALILAND.**

SOUTH AFRICAN UNION. See **BRITISH SOUTH AFRICA.**

SOUTH AUSTRALIA. A state of Australia. Area, 903,690 square miles; population at the end of 1906, 383,829. Adelaide, the capital, had an estimated population of 175,641 on the same date. For details regarding population, education, production, etc., see **AUSTRALIA.** The executive power is vested in a governor appointed by the crown and acting through a responsible ministry. The Parliament consists of a legislative council of eighteen members, elected for six years upon the basis of a property suffrage, and a House of Assembly of forty-two members, elected for three years by universal suffrage. Women vote for both Houses. The Premier is T. Price.

The Northern Territory has an area of 523,620 square miles and 3586 inhabitants, exclusive of 20,000 aborigines. Palmerston, on Port Darwin, is the capital. In 1907 it was decided to transfer it to the Commonwealth government.

In December, 1907, the transfer of the Northern Territory to the Commonwealth was authorized. Parliament opened on July 23, 1908. The government announced a large financial surplus, and among other measures a comprehensive scheme for the reclamation by drainage of a great tract of swamp land in the southeast. Toward the close of the year Admiral Sir D. H. Basanquet was appointed to succeed Sir G. R. Le Hunte, as governor.

SOUTH CAROLINA. One of the South Central States of the American Union. Its area is 30,989 square miles. The population, according to a Federal estimate made in 1903, was 1,491,650.

MINERAL PRODUCTION. The chief mineral productions of South Carolina are associated with the mining of phosphate rock and its products. The value of phosphate products in 1906 was \$7,945,955. The value of the phosphate rock produced was \$1,118,375. Next in value are clay products, which in 1906 amounted to \$830,481. Stone was produced to the value of \$258,398; clay, \$175,351; gold, \$78,959; monazite, \$43,000; lime, \$34,719; marl, \$9450. Tin was also mined to the value of \$16,800, but this product was not shipped. The value of gas coke, gas and coal oil produced in 1906 was \$228,817. The total mineral production for 1906 was \$11,090,111. Included in this was mineral water to the value of \$348,744. Copper appears in the State, but it has not yet been discovered in sufficient quantities to be of commercial value. There are also deposits of iron in various places in the State, especially in Cherokee zone and the Anderson-Spartanburg zone, and the Abbeyville-York zone. Fullers' earth has been discovered within recent years and it is being mined in different portions of the State. Kaolin, fire-clay and peat are also found. According to figures by the United States Geological Survey, from whose reports the statistics given above are taken, the value of the total mineral production of the State in 1907 was \$2,305,203, as compared with a value in 1906 of \$2,800,108.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1908, according to the figures of the United States Department of Agriculture, were as follows: Corn, 29,229,000 bushels, valued at \$26,598,000, from 2,073,000 acres; winter wheat, 2,535,000 bushels, valued at \$3,686,000, from 315,000 acres; oats, 4,020,000 bushels, valued at \$3,015,000, from 201,000 acres; rye, 58,000 bushels, valued at \$52,000, from 4000 acres; rice, 480,000 bushels, valued at \$508,800, from 20,000 acres; potatoes, 729,000 bushels, valued at \$802,000, from 9000 acres; hay, 81,000 tons, valued at \$1,199,000, from 65,000 acres; tobacco, 25,085,000 pounds, valued at \$2,508,500, from 29,000 acres. The cotton crop of 1908 was estimated at \$1,118,000 bales, which was an increase over the production of 1907, which was 931,726 bales. In the production of rice, the State is exceeded only by Texas and Louisiana. In the production of cotton it ranks fifth. The acreage of rice has greatly decreased in recent years. The number of farm animals by thousands on January 1, 1909, was estimated as

follows: Horses, 85,000; mules, 141,000; dairy cows, 139,000; other cattle, 225,000; sheep, 58,000; swine, 685,000. The wool clip in 1908 was estimated at 200,000 pounds, valued at \$45,240.

MANUFACTURES. Manufactures in South Carolina have had rapid development in recent years. Textile manufacturing is by far the most important of all the manufacturing industries of the State, the capital involved in 1907 lacking only \$10,000,000 as much as was invested in all manufacturing in 1905. The State leads all the Southern States in cotton manufacturing, both in capital and spindles, having nearly two and a quarter million dollars more capital than the second State, North Carolina. South Carolina also in this regard ranks second among all the States of the Union, Massachusetts only outranking it. The State ranks first in the manufacture of commercial fertilizers and fifth in each of the canning and hosiery industries. Lumber and timber products and planing mill products rank second in the State's manufacturing enterprises, and following in the order named are fertilizer manufacturing and cottonseed oil and cake manufacturing. Since 1905 there has been a marked tendency on the part of manufacturers to pay more attention to the smaller and diversified manufacturing industries. The textile industry has increased since 1905 to a remarkable degree, as notwithstanding the financial condition at the close of 1907, there were announced to be built and put into operation during 1908 18 new textile plants alone, 12 of which represented \$2,746,000 capital and over 100,000 spindles. Over 77,000 people were, in 1907, actually employed in manufacturing plants, and of these nearly 60,000 were in textile plants. In 1907 there were 25 fertilizer factories, whose plants were valued at \$2,801,937. During the period from 1905 there had been a remarkable growth in cotton manufacturing. Reports of statistics as gathered up to August 1, 1908, indicate the following figures: Capital invested, \$105,826,919; value of products, \$77,010,419; number of wage-earners, 56,223. Corresponding figures for 1905 were as follows: Capital invested, \$82,237,429; value of products, \$49,437,644; wage-earners, 37,271. In 1905, 9,769 children under 16 years of age were working in the cotton mill plants, while in 1907, owing in part to the operation of the child labor law and in part to the general desire of manufacturers not to employ children when possible to avoid it, the number had decreased to 8,121. During 1908 many of the largest cotton mills increased the capacity of their plants.

POLITICS AND GOVERNMENT. The disposal of the funds of the State dispensary, abolished in 1907, brought on a conflict between the Federal and State authorities. There are funds remaining amounting to about \$800,000, for which there are many claimants. A Winding Up Commission was appointed to investigate these claims, and distribute these funds, but before the task was accomplished Judge Jeter C. Pritchard, deciding the question to be a matter of Federal jurisdiction, appointed receivers, and on January 1 issued an injunction restraining the State Commission from disposing of the funds. This action was resented by Gov. Ansel,

and on March 5 he sent a special message to the Legislature recommending action "to protect the sovereignty of South Carolina in the matter of interference on the part of the United States Circuit Court." On March 12, Gov. Ansel came into direct clash with Judge Pritchard by notifying each of the thirty banks of the State that they would be held responsible by the State for the sums thus paid out. On September 15 the United States Circuit Court of Appeals sustained the opinion of Judge Pritchard, holding that the Eleventh Amendment prohibits a sovereign State from becoming a trader by buying or selling an article of common traffic in competition with the citizens of the country. Many prosecutions were undertaken against those who, it was alleged, had defrauded the State of millions of dollars in connection with the dispensary since its establishment in 1894. Warrants were issued for persons all over the United States, including many wholesale liquor dealers. Senator A. C. Latimer died on February 20, and on March 6, the Legislature elected Frank B. Gary, former Speaker of the House, to fill his unexpired term, which ended on March 4, 1909. On January 30, a State prohibition bill was defeated in the House of Representatives, and the same fate overtook the railroad rate bill in the Senate.

CONVENTIONS AND ELECTIONS. The Republican State Convention met at Columbia on April 28 and chose delegates to the National Convention. The delegates were not instructed. Resolutions were passed commending President Roosevelt's administration, and demanding equal accommodations for negroes on railroad trains. The delegates chosen at the Democratic State Convention were instructed to vote for W. J. Bryan. On August 25 Democratic primaries were held for nomination of State officers. Gov. Ansel was nominated for reelection. In a second primary held on September 8, E. D. Smith received the nomination for the Senate, to succeed the late Senator Latimer. In the election of November 3, the Democratic party carried the State by the customary plurality of about 60,000 votes. The detailed vote for the national and State tickets was as follows: Bryan, 62,288; Taft, 3963; Debs, 100; Hisgen, 42. Ansel was the only candidate for governor. He received 61,060 votes.

LEGISLATION. Among the important measures passed at the legislative session of 1908 were the following: Acts were passed establishing a separate and distinct department of the State government to be known as the insurance department, charged with the enforcement and execution of laws relating to insurance. Measures were passed for the teaching of physiology and hygiene in the public schools. The drinking of intoxicating liquors upon trains passing through the State was forbidden. The Board of Medical Examiners was authorized to revoke the licenses of any physician or surgeon who was guilty of felony or gross immorality, or who is unduly addicted to the liquor or drug habit, or who has suffered conviction for illegal practices.

STATE OFFICERS. Governor, M. F. Ansel; lieutenant-governor, W. S. McLeod; secretary of state, R. M. McCown; attorney-general, J. F. Lyon; treasurer, R. H. Jennings; comptroller-general, A. W. Jones; superintendent of educa-

tion, John R. Swearinger; adjutant-general, J. C. Boyd—all Democrats.

JUDICIARY. Supreme Court: Chief justice, Y. J. Pope; justices, C. A. Woods, Eugene B. Gary, Ira B. Jones; clerk, U. R. Brooks—all Democrats.

The State Legislature of 1908 was composed of 42 Democrats in the Senate and 124 Democrats in the House. The State representation in Congress will be found in the article **UNITED STATES** under the section *Congress*.

SOUTH DAKOTA. One of the North Central States of the American Union. Its area is 77,615 square miles. The population, according to a Federal estimate, was 487,354.

MINERAL RESOURCES. Gold is the only mineral product of importance in South Dakota. The aggregate value of all products in 1907 was \$4,938,829, a remarkable decrease over the value of the production of 1906, which was \$7,509,907. The production of gold which in 1906 was valued at \$6,841,469 fell in 1907 to the value of \$4,138,200. Silver was produced in 1907 to the value of \$70,400, as compared with the value of the product in 1906 of \$101,086. Among other mineral products are clay products, lead, lime, and stone. Decline in the prices of silver and the base metals did not affect the gold mines in the Black Hills in 1908, and a considerably increased production of gold was expected for the year. The Homestake mine was operated successfully and continuously with a greatly increased production, which probably will approach \$6,000,000. Several new mills were built during the year. The Director of the Mint estimates the gold production of the State for 1908, at \$7,690,294, against \$4,138,200 in 1907. This is a larger increase than is shown by any other State.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1908, according to figures of the United States Department of Agriculture, were as follows: Corn, 57,677,000 bushels, valued at \$28,838,000 from 1,942,000 acres; spring wheat, 37,862,000 bushels, valued at \$34,833,000 from 2,958,000 acres; oats, 31,395,000 bushels, valued at \$12,872,000 from 1,365,000 acres; barley, 24,592,000 bushels, valued at \$11,558,000 from 928,000 acres; rye, 560,000 bushels, valued at \$330,000 from 32,000 acres; flaxseed, 5,885,000 bushels, valued at \$7,003,000 from 550,000 acres; potatoes, 4,050,000 bushels, valued at \$2,066,000 from 45,000 acres; hay, 765,000 tons, valued at \$3,136,000 from 51,000 acres. In the production of flax, the State ranks second, being surpassed only by North Dakota. In the production of barley it also ranks third, exceeding every other State except California and Wisconsin. A large area in the State is devoted to the cultivation of fruit. The number of farm animals by thousands on Jan. 1, 1909, was estimated as follows: Horses, 594,000; dairy cows, 643,000; other cattle, 1,397,000; sheep, 821,000; swine, 894,000. The wool clip for 1908 was estimated at 4,225,000 pounds, valued at \$823,875.

MANUFACTURES. Manufacturing is still important. The value of factory-made products increased from \$9,525,900 in 1900 to \$13,085,300 in 1905. The leading industries were credited with the following values in 1905: Flour and grist mill products, \$6,519,300; dairy products, \$2,182,600; and printing and publishing, \$1,221,780, these three values being respectively 103,

82 and 76 per cent. larger than corresponding values in 1900. Sioux Falls produced \$1,897,790 of the value of products.

FINANCE. The treasurer's report showed a balance of \$414,322 on July 1, 1907. The receipts during the fiscal year following were \$2,417,218, and the disbursements \$2,267,205, leaving a balance June 30, 1908, of \$564,335. There were thirty-eight different funds listed in the report, among which there were, besides the general fund and the common school fund, the twine plant fund, appropriated for the State Penitentiary, containing a balance of \$208,360; nine permanent school funds and fourteen local and endowment funds for as many different institutions. The principal source of revenue is the property tax. The State debt July 1, 1908, consisted of a floating indebtedness of \$250,000 of 5 per cent. revenue warrants and the balance of outstanding registered general fund warrants to the amount of \$133,184, making the total indebtedness \$383,184. The assessed valuation in 1907 was \$280,630,077, and the assessed valuation for the year 1908, \$283,696,268, showing a gain of \$96,000 in the past six years.

CHARITIES AND CORRECTIONS. The penal and charitable institutions of South Dakota consist of a School for the Blind at Gary; a State Training School at Plankinton; a School for Deaf Mutes at Sioux Falls; a School for Feeble-Minded at Redfield; a Hospital for the Insane, at Yankton; a State Penitentiary at Sioux Falls; a Soldiers' Home at Hot Springs. In addition to these, there is a hospital for insane Indians at Canton, established and maintained by the Federal government. The total expenditure for the support and maintenance of these institutions for the year ending June 30, 1908, was \$400,000.

POLITICS AND GOVERNMENT. There was no session of the State Legislature in 1908. On Jan. 10 the State Supreme Court handed down a decision which, in effect, declared that dealing in futures is not gambling. That section of the primary law which requires a fee was held invalid by the Supreme Court on April 11. The no-license area of the State was materially increased at municipal elections held on April 21. Sioux Falls voted for license, but Mitchell decided against saloons for the first time in 13 years. The most important political event of the year, from a national standpoint, was the abolition, by a vote of the people on Nov. 3, of the laws relating to divorce, which for years have made the State notorious. The new laws, made by the legislature of 1907, raise the period of residence from six months to a year, and require the hearings to be held at regular terms of court, instead of "in chamber." (See **DIVORCE**.) County local option was defeated at the general election Nov. 3 by a vote of 39,075 yes, 41,405 no. A law closing Sunday amusements or entertainments where a fee is charged was adopted at the same time by a vote of 48,378 yes, 48,006 no.

CONVENTIONS AND ELECTIONS. The Republican State Convention on April 7 instructed the delegates to vote for W. H. Taft for President, and the Democratic Convention, on the same date, took similar action in regard to W. J. Bryan. Republican State primaries were held on June 14 to nominate a candidate for United States Senator. Senator A. B. Kittredge and Governor Coe I. Crawford were the leading contestants. Senator Kittredge represented the

Republican organization of the State, while Gov. Crawford had the support of the so-called "Progressive" element. Crawford received a majority of about 2,700 votes. In the election of Nov. 3, the Republican party carried the State by a plurality of about 27,000. Robert L. Vessey, the Republican candidate for governor, was elected, with the entire State ticket. The detailed vote for national and State tickets was as follows: Taft, 67,352; Bryan, 40,223; Debs, 2,841; Chafin, 4,030. Vessey, 62,945; Lee (Dem.), 44,837.

OTHER EVENTS. On April 23, a tornado demolished 30 houses in the town of Valley Springs. Prairie fires caused much damage in various sections of the State in October, and on Oct. 14 the city of Dallas was saved from destruction only by extraordinary efforts on the part of its citizens. Lands in Tripp county in the Rosebud Indian Reservation were opened to settlers by the government in October. See **LANDS, PUBLIC.**

STATE OFFICERS. Governor, R. S. Vessey; lieutenant-governor, H. C. Shober; secretary of state, R. S. Polley; treasurer, George Johnson; auditor, John Herning; attorney-general, S. W. Clark; superintendent of education, H. A. Ustread; commissioner of lands, O. C. Dokken—all Republicans.

JUDICIARY. Supreme Court: Presiding justice, Dick Haney; justices, Howard G. Fuller and Dighton Corson; clerk, Frank Crane—all Republicans.

The State Legislature of 1909 is composed of 39 Republicans and 6 Democrats in the Senate, 95 Republicans and 9 Democrats in the House. The State representation in Congress will be found in the article UNITED STATES under the section *Congress*.

SOUTHERN NIGERIA. A British colony and protectorate in West Africa. Area, 77,260 square miles; population (1906), estimated at 6,000,000. The Anglo-German boundary commission finished its work in the latter part of 1907. There are about 1,000 Europeans. Lagos, the capital, had 41,847 inhabitants in 1901 (233 Europeans). Other large towns are: Abeokuta, 100,000, and Old Calabar, 15,000 to 20,000. There are a large number of small towns, with from 2,000 to 10,000 inhabitants. The natives cultivate maize, plantains, ground-nuts, yams and cassava. Cacao, coffee, and cotton are also grown. The cotton export in 1907 from the Lagos province was 4,089,530 pounds. The export of cacao in 1907 was 2,089,226 pounds, valued at £47,840, against 1,619,987 pounds, valued at £27,054, in 1906. Three-quarters of the cacao is grown in Lagos—1,525,089 pounds in 1907, while the Central Province yielded 1,936 pounds, and the Eastern Province 562,201 pounds. The foreign commerce includes largely that of Northern Nigeria. In 1907 the total imports amounted to £4,438,906 (£3,330,785 from Great Britain), and the total exports, £4,202,704 (£2,039,821 to Great Britain). The leading imports are cotton goods, spirits, unmanufactured tobacco, coopers' stores, hardware, cutlery, wearing apparel, rice, and provisions. The principal exports are palm oil, palm kernels, rubber and cacao. A railway has been constructed from Iddo Island to Horin, in Northern Nigeria, whence it is being extended to Jebba, on the Niger. It will ultimately connect with the line in Northern Nigeria, now in construction, from

Baro to Kano. There are over 1,125 miles of telegraph line. The colony is divided into three provinces: The Western Province, coinciding with the former colony of Lagos, the Central Province, and the Eastern Province. The revenue in 1907 was £1,459,554; the expenditure, £1,217,337. The governor in 1908 was Sir Walter Egerton.

SPAIN. A kingdom of the Pyrenean peninsula. Area, including the Canary and Balearic islands and small possessions on the north and west coast of Africa, 194,794 square miles. Population in 1900, 18,617,956; estimated Dec. 31, 1907, 19,712,585. In 1906 there were 137,853 marriages, 650,364 births, and 499,004 deaths; in 1907, 136,135 marriages, 646,472 births, and 472,015 deaths. Thus the excess of births in 1906 was 151,360, and in 1907, 174,457. The number of emigrants in 1906 was 126,771; in 1907, 130,640. The principal cities in 1900 were: Madrid, the capital, 518,656; Barcelona, 529,486; Valencia, 154,119; Seville, 145,254; Malaga, 111,930.

AGRICULTURE. The production of wheat in 1907 was 100,331,000 bushels, against 140,656,000 in 1906, and 92,504,000 in 1905. The exceptionally abundant crops of 1906 resulted in a largely decreased wheat import, which amounted to 116,733 tons in 1907, against 525,613 tons in 1906, and 884,986 tons in 1905. The importation of wheat flour also decreased from 59,820 tons in 1905 to 14,382 tons in 1906 and 62 tons in 1907. The maize crop of 1907 was 30,000,000 bushels, against 31,871,000 in 1906, and 21,300,000 in 1905. The rice crop of 1907 was 425,800,000 pounds, against 478,800,000 in 1906, and 394,600,000 in 1905. The oats crop of 1907 was 16,998,000 bushels, against 45,632,000 in 1906, and 22,250,000 in 1905. The output of sugar cane in 1907-8 was 120,000 tons; in 1908-9, 250,000 tons. The output of sugar beets in 1907-8 was 978,473 tons; in 1908-9, 760,000 tons. Spain is the second largest producer of olives in the world. About 3,500,000 acres are planted in olive trees, from which are produced, in a good average year, 1,400,000 tons of olives and 69,000,000 gallons of olive oil. The 1906 olive crop was poor, and the 1907 crop good. The exports of olive oil in 1905 were 75,302,475 pounds valued at \$5,901,448; in 1906, 41,605,470 pounds, valued at \$3,260,617; in 1907, 23,699,854 pounds, valued at \$1,857,355. The improvement in the 1907 crop is reflected in the export figures for the first five months of 1908, which were 34,987,544 pounds, against 11,855,364 pounds during the same period in 1907, and 27,790,320 pounds during the same period in 1906. Spanish olive oil does not reach the consumers' markets directly, but is shipped to France and Italy, where it is refined, mixed with other oils, and adapted to the demands of consumers. It is reported, however, that in Spain antiquated methods of handling olive oil are giving way to modern methods, and it is hoped that in the future Spanish oil may reach consumers directly. The wine production of 1907 was 464,640,000 gallons, coming after that of France and Italy.

MINING AND METALS. The total value of the mineral production of 1906 was 478,459,850 pesetas (1 peseta=19.3 cents), an increase of 60,475,324 pesetas over 1905. The coal production of 1906, including anthracite, bituminous and brown, was 3,240,979 tons. The following ores

were raised in 1907: Iron, 10,072,769 metric tons (9,448,533 in 1906); copper and cupreous pyrites, 3,376,041 tons (2,888,771 in 1906); magnetite, 33,916 tons; zinc (blende and calamine), 126,351 tons (170,383 in 1906); quicksilver, 26,632 tons; silver, 648 tons; lead, 276,021 tons; silver-lead, 15,541 tons (160,381 in 1906); sulphur, 26,632 tons; asphalt, 8,467 tons; antimony, 92 tons; tin, 294 tons; phosphorite, 3,078 tons; graphite, 2,473 tons; wolfram, 163 tons. The production of pig iron in 1907 was 380,580 tons—about the same as in 1906 and 1905; of copper, about 50,000 tons; of lead, 185,800 tons. About three years ago petroleum was discovered at the town of Villamartin, in the south of Spain. In March, 1907, a company was formed for exploration, and in Dec., 1907, there was struck abundant petroleum of the best quality, rich in benzine and in the lighter oils.

MANUFACTURES. During the year ending Aug. 31, 1908, the cotton industry employed 1,850,000 spinning spindles, and consumed 212,374 bales of cotton, of which 116,878 were American and 93,939 East Indian. The total imports of cotton in 1907 were 397,972 bales. The production of cane sugar in 1907-8 was 12,000 tons; in 1908-9, 22,000 tons. The production of beet sugar in 1907-8 was 115,000 tons; in 1908-9, 83,000 tons. The manufacture and sale of tobacco is a government monopoly, farmed to a company, which pays the government in postage and revenue stamps about \$35,000,000 a year. There are 27 match factories. The production and sale of matches is another government monopoly granted to a company.

COMMERCE AND COMMUNICATIONS. The imports for consumption and exports of domestic produce in 1907 amounted to 932,549,208 and 930,850,874 pesetas respectively, against 1,015,492,919 and 897,902,032 pesetas in 1906. The imports and exports of 1907 were classified as follows, in pesetas:

	Imports	Exports
Minerals, glassware, and pottery	94,851,000	182,898,000
Metals and their manufactures	53,896,000	150,276,000
Drugs and chemicals	108,098,000	35,185,000
Cotton and its manufactures	153,658,000	53,098,000
Other vegetable fibres and their manufactures	24,014,000	2,742,000
Wool and its manufactures	17,583,000	22,107,000
Silk and its manufactures	21,486,000	6,117,000
Paper, etc.	15,062,000	11,082,000
Timber and its manufactures	53,036,000	69,084,000
Animals and their products	86,962,000	55,897,000
Machinery	89,820,000	3,828,000
Foodstuffs and beverages	164,396,000	314,237,000
Precious metals	5,133,000	14,082,000

The trade with the principal countries in 1906 was as follows, in pesetas:

From and to	Imports	Exports
France	146,941,000	151,923,000
Great Britain	173,915,000	290,399,000
Germany	92,447,000	47,294,000
Netherlands	12,593,000	51,477,000
Belgium	27,938,000	30,329,000
Portugal	43,991,000	34,897,000
Russia	64,779,000	1,467,000
Italy	15,928,000	40,297,000
United States	140,773,000	35,164,000
Mexico	6,024,000	31,013,000
Cuba and Porto Rico	10,344,000	63,376,000
Argentina	35,697,000	43,718,000
Philippines	15,438,000	10,645,000
British India	45,340,000	1,893,000
Spanish colonies	8,723,000	14,144,000

The merchant marine in 1908 consisted of 504 steamers, of 423,000 net tons, and 304 sailing vessels (of 50 tons and over), of 28,700 tons. The railways, all privately owned, had a length of 9,195 miles in 1906; the telegraph lines, 20,749 miles.

FINANCE. The revenue and expenditure in 1907 were 1,079,830,297 and 1,009,443,561 pesetas respectively. The budget for 1908 estimated the revenue and expenditure at 1,040,680,477 and 1,023,168,614 pesetas respectively; for 1909, at 1,059,919,366 and 1,043,720,746 respectively. The principal estimates of revenue for 1908 were: Direct taxes, 450,520,068; customs, excise, and stamps, 368,700,000; State monopolies of tobacco, matches, explosives, and lotteries, 181,321,001; and of expenditure: Civil list, 8,900,000; public debt, 404,483,437; war, 157,578,324; marine, 46,963,830; pensions, 74,036,000; church, 41,231,389; education, 51,607,776. In the budget for 1909 the estimate for army and navy expenditures showed increases of 4,865,068 and 4,948,247 pesetas, respectively, over those for 1908. The public debt stood in Oct., 1907, at 9,499,020,575 pesetas. A loan of 160,000,000 pesetas in July, 1908, was oversubscribed 55 times. Since the war Spanish credit has greatly improved. Thus the perpetual internal 4 per cent. bonds, which were quoted at 60-63 in Jan., 1899, rose to 83-84 in July, 1908. Similarly the redeemable internal 5 per cent. bonds of the loans of 1900 and 1902, which were issued at 88-90, were quoted in July, 1908, at nearly 102.

ARMY. Military service is compulsory, but by conscription instead of being universal, with many exemptions including the privilege of paying a sum of money in lieu of personal service. Service in the active army, or first line, is for 6 years, of which 1 to 2½ years is spent in the ranks and the remainder in the reserve. Service in the second line, or second reserve, is for 6 years, with one month's training per year. There are 56 line regiments of infantry and 18 battalions of rifles; 28 regiments of cavalry and the royal escort squadron; 12 regiments of field, 1 of horse, 1 of siege, 3 regiments and 1 division of mountain, and 7 battalions of garrison artillery; and the usual auxiliary troops. The total strength of the field army is 220,000 of all grades; the second line troops number 90,000; the Guardia Civil 20,000; and the Carabineiros, 14,000. The total peace strength in 1908 was 80,000 officers and men. In 1908 Spain adopted the new pointed bullet now in general use in military countries, and passed a law authorizing promotion from the ranks in time of peace as well as in war.

NAVY. A law of Jan. 6, 1908, provided for the reconstruction of the navy, the material to be purchased abroad. The time limit for the presentation of bids for the rebuilding of the navy expired on Aug. 21; but no contract has yet been awarded. The effective navy consisted in 1908 of 1 second-class battleship, 9,900 tons; 2 armored cruisers, 14,000 tons; 1 large protected cruiser, 9,240 tons; 4 small protected cruisers, 14,050 tons; 13 gunboats, 6,410 tons; 5 destroyers, 2,100 tons; 8 torpedo boats, 780 tons, giving a total of 34 ships and 55,778 tons. A second-class cruiser of 5,871 tons was under construction.

GOVERNMENT. King Alfonso XIII was born May 17, 1886, after his father's death. The cabinet in 1908 was as follows: President, Ant. Maura; foreign affairs, Allende Salazar; wor-

ship and justice, Marquis de Figueroa; war, F. Primo de Rivera; marine, J. Ferrandiz; finances, A. Gonzalez Besada; interior, J. de la Cierva; public instruction, F. Rodriguez San Pedro; public works, agriculture, and industry, J. Sanchez Guerra.

HISTORY.

THE "TERRORIST BILL." For years Spain has suffered from anarchistic plots, of which Barcelona has been the centre. In 1907, seventeen bomb explosions took place there, killing five persons and wounding eighteen. At the beginning of 1908 anarchistic attempts appeared to be on the increase, and on Jan. 26, after the meeting of the Cortes, the minister of justice read in the Senate a bill dealing with anarchistic agitation containing very severe provisions and modifying radically the existing law for the suppression of the criminal use of explosives. It empowered the government to suppress summarily anarchistic journals and clubs, to close houses used as meeting places by suspects, and to banish anyone who in speech or writing advocated doctrines destructive of social order. It also enabled the government to suspend by decree the ordinary process of law in any district, and another clause declared it punishable by imprisonment to print any unofficial news in regard to anarchistic crimes. Both these features aroused vigorous opposition, leading to obstruction in the Cortes and public demonstrations. The clause dealing with the press created a special committee with plenary power for the suppression of the offending journals. It was attacked on all sides as an infringement of the liberty of the press. Meetings of protest were held, and the leading Madrid journals united to form a committee of defense. Meanwhile the Portuguese assassinations and the criminal attempts had strengthened the government's determination, and on Feb. 21 Premier Maura declared that the government would go ahead without regard to reprisals and in the face of opposition if necessary. At the same time two decrees established in each house concierges qualified to make arrests and required the local constabulary to cooperate. By gathering all senators absent on official business, the government finally put the measure through the Senate, but the opposition in the Chamber was intense. A commission was chosen by that body to study the question, and from May 13 heard opinions from all sides. The Press Defence Committee published lists of its accessions, including among others the Barcelona workingmen's association with 26,000 members. A mass meeting was held in June at the Princess Theatre at Madrid, where violent speeches were made. The government finally repealed the decree suspending constitutional guarantees in Catalonia. The parliamentary commission decided to suspend its report and adjourned *sine die*. A rupture between the Catalan deputies and the government occurred in June. The premier having refused their demand for the repeal of the law of 1906, which subjected attacks on the army to a military court, the Catalan deputies withdrew from the Cortes (June 13). The Catalan Assembly, however, while voting confidence in the deputies, required them to return and persist in the demand for the repeal of the law.

THE KING'S VISIT TO BARCELONA. At the time when terrorism in Barcelona was at its height the King resolved to pay a visit to the city on the occasion of the arrival of an Austrian squad-

ron. In spite of many protests against it as an act of rashness, he entered Barcelona on March 10. Fears for his safety proved to be unfounded. He was received with great enthusiasm and there was no sign of revolutionary disturbance. He walked about the streets almost without escort. The visit was thought to have done much to allay the extreme separatist and anti-dynastic spirit of Catalonia, as well as to win friends for the monarchy.

THE LOCAL ADMINISTRATION BILL. The Maura ministry had won a sweeping victory in the last elections, but in spite of this and in spite of the weakness of the Liberals and the divisions among the Republicans, it soon encountered a formidable opposition. Before the close of 1907 moderate Liberals, Republicans and Democrats had joined in demanding a large increase in the expenditure for public instruction through the creation of 2,500 primary schools. The government opposed it successfully on financial grounds, and the public instruction budget was voted without amendment. Opposition to the "Terrorist" bill, however, was, as indicated above, more serious, and so was the opposition to the government measure for local administration. This established the corporate vote in the "regional" elections, which was regarded by the Left as an attack on universal suffrage. A vigorous campaign against it was carried on by the Socialists, and meetings of protest were held at Bilbao, Valencia, and Logroño. It was before the Cortes for six months and as the bill contained over 400 articles to which 400 amendments had been offered by the beginning of April, with the prospect of offering 800 more, the discussion threatened to be interminable. In addition to the opposition to it as a curtailment of the individual suffrage, objection was made in financial circles to the unlimited right of creating and administering revenues which it conferred on the 8,000 communes. Finally the premier forced progress by withholding his consent to adjournment for vacation except on the condition that the Cortes should act on the first half of the measure at once and double its work and its sittings on the second half when it re-assembled. See WOMEN IN INDUSTRY.

THE MOROCCAN POLICY. On the whole, public opinion in Spain was thought to be favorable to cooperation with France in Morocco. Nevertheless there was much criticism in the press accusing the government of letting the country be dragged at the heels of France and duped by foreigners. The visit of M. Pichon, the French foreign minister to Madrid, in January, was viewed with suspicion in some quarters, though it was explained as merely a return visit for that paid in October, 1907, by the Spanish foreign minister to Paris. More grumbling was heard on the occupation of Mar-Chica by Spanish troops (Feb. 13), but the foreign office explained that under the treaty of 1894 with the Maghzen, such a course was legitimate, that it was a necessary and provisional act of force. A Red Book setting forth Moroccan affairs from May 10, 1906, to Feb. 17, 1908, distributed to the Cortes at the end of February, did much to allay apprehension.

SPARTA, EXCAVATIONS IN. See ARCHEOLOGY.

SPELTER. See ZINC.

SPERRY, CHARLES STILLMAN. An American naval officer, succeeded to the command of the

Atlantic fleet during its cruise around the world, at San Francisco on May 15, 1908. He was born in Brooklyn, N. Y., on Sept. 3, 1847, and graduated at the United States Naval Academy in 1866. He became master in 1869, lieutenant in 1870, lieutenant-commander in 1885, commander in 1894, captain in 1900, and rear-admiral in 1906. During the Spanish-American war he commanded the *Yorktown*. He was assigned in Nov., 1907, to command a division of the battleship fleet and succeeded to the command of the fleet at San Francisco. The fleet visited Australia, Japan, the Philippines, and Ceylon and returned to the United States by way of the Mediterranean.

SPIRITUALISTS' ASSOCIATION. THE NATIONAL. An organization of the various spiritualist societies of the United States into one general association, organized in 1893. Its general purpose is the study of spiritualistic phenomena, and it also engages in benevolent, charitable, educational, scientific, religious and missionary work. There were in the United States in 1908 600 spiritualist societies, 22 State associations, 25 camp meeting associations, one academy for liberal education, 200 churches and temples. The membership of avowed spiritualists is about 100,000. There are 1,500 public mediums and 200 ordained ministers. The president is Dr. George B. Warner; treasurer, Cassius L. Stevens; and the secretary, George W. Kates, Washington, D. C.

SPITZBERGEN. A group of islands in the Arctic Ocean, about 430 miles north of Norway. Area, about 21,500 square miles. The interior is little known. Russian, Scandinavian, and British hunters visit the islands. Norwegian whalers have been coming regularly every season since 1903. Coal mining is being carried on by two companies. The coal mines of the Trondhjem American Spitzbergen Coal Company were extended and deepened in the winter of 1907-8. About 2,000 tons of coal were mined during the winter, and regular working was to begin in Aug., 1908. By 1909 the electric power house to operate the mining machinery was to be completed. The Anglo-Bergen Coal Company, which was supplied with more suitable machinery, mined some 4,000 tons of coal during the winter of 1907-8. Spitzbergen coal from near Advent Bay is now used by the Norwegian State railways. The islands do not belong to any nation, and there is no policing of any sort, so that the naturally plentiful game is being wantonly destroyed. Diplomatic negotiations among the various powers interested, aiming at settling the political status of the islands, were in progress in 1908.

SPOFFORD, AINSWORTH RAND. An American librarian, died on Aug. 1, 1908. He was born at Gilmanstown, N. H., on Sept. 12, 1825, studied English and the classics under private tutors, and in 1844 went to Cincinnati, where he became a bookseller and publisher, and, in 1850, was one of the founders of the Literary Club. He was associate editor of the Cincinnati *Daily Commercial* from 1859 to 1861, when he became first assistant librarian of Congress. In 1864 he became librarian-in-chief and he held this position until 1897, when he was succeeded by Herbert Putnam, though he continued his connection with the library as chief assistant. At the time Mr. Spofford came to the library it contained only about 70,000 volumes, which

were arranged, after a fashion, in the Capitol. But within the next thirty years the collection had increased to more than 700,000 volumes, with shelf room for less than half that number. His publications include: *Practical Manual of Parliamentary Rules* (1884), and *A Book for All Readers—an Aid to the Collection, Use and Preservation of Books, and the Formation of Libraries* (3d ed., 1905); and edited the *Annual American Almanac* (1878-89), and, with others, *Library of Wit and Humor*, and *Library of Historic Characters and Famous Events*.

SPRECKELS, CLAUS. A German-American sugar manufacturer, died on Dec. 26, 1908. He was born in Darmstadt, Hanover, in 1828, came to America in 1846, and after engaging in business in Charleston, S. C., and New York City, went, in 1856, to San Francisco. Here, in 1863, he started a sugar refinery which was so successful that by 1866 he was enabled to sell it at a profit and go to Germany to study foreign methods of sugar refining. He returned to the United States in 1868 and again engaged in the manufacture of sugar. During the next twenty years he built four refineries, one of them in the Hawaiian Islands being at the time the largest in the world. After further study in Germany, in 1877, he started another refinery at Watsonville, Cal., in 1888. In 1889 he built an immense refinery, at a cost of \$5,000,000, near Philadelphia, but soon afterwards sold this and his San Francisco establishment. He was principal owner of the Oceanic Steamship Company.

STANDARD OIL. Numerous prosecutions against the Standard Oil Company of New Jersey and its subsidiary companies were carried on during 1908. The chief efforts of the Roosevelt administration against illegal combinations were directed against the Oil Trust. In 1908 there were in all more than a score of criminal suits against this company for illegally giving rebates. Most of these were continued from 1907 and were still pending at the end of the year. Of all these cases under the Elkins anti-rebate law, that in which Judge Landis on Aug. 3, 1907 imposed a fine of \$29,240,000 was the most conspicuous. The other prominent case was the civil suit brought in the United States Circuit Court at St. Louis seeking a dissolution of the combination as in violation of the Sherman anti-trust law.

The great fine imposed by Judge Landis was not paid. The Company appealed to the Circuit Court of Appeals of the seventh circuit. An opinion, written by Judge Peter L. Grosscup of Illinois, and reversing the Landis decision, was handed down on July 22. The two other judges concurred in the opinion. The court held that three rulings of the lower court were sufficient grounds for reversal, as follows: (1) Its ruling that a shipper may be convicted of accepting a concession from the lawful published rate, even though it was not shown that the shipper knew what the lawful published rate was; moreover the defendant was not allowed to present all his evidence as to his knowledge of the true rate; (2) its ruling that the number of offenses is the number of car-loads of property transmitted, irrespective of the question whether each car-load is the whole or only a part of a single transaction resulting in a shipment; the actual money settlements numbered 36, while the car-loads, the basis of the

fine, numbered 1462; (3) the largeness of the fine imposed, due to the effort "to reach and punish a party that was not before the court." Judge Grosscup characterized the fine as "an abuse of judicial discretion." The validity of the Court's reasoning was not universally accepted. President Roosevelt characterized the decision as "a gross miscarriage of justice."

This decision remanded the whole case for retrial to the District Court which imposed the heavy fine. In August however the government applied to the Circuit Court of Appeals for a rehearing. This application opposed the arguments of the Grosscup opinion. It pointed out that evidence had been presented showing Standard Oil not to be ignorant of the fact that it was receiving rebates. It alleged that the original proceedings had been directed against the Standard Oil Company of Indiana, that the trial judge had this company in mind when the fine was imposed, and that the fine was not excessive in view of the large profits of that company. It contended that the doctrine of the appellate court that only such settlement rather than each shipment constitutes an offense, "leaves it to the shipper and carrier to elect for how many offenses they shall be prosecuted and how much they shall be fined." As a basis for Judge Landis's doctrine that each carload is a separate offense, the application cited a previous decision by Judge Grosscup and asserted that in the case at hand each carload was in fact a separate shipment. Finally the application stated that if the fine were too large, the Circuit Court of Appeals might "itself name the fine which should be imposed," instead of sending the whole case back for retrial on the ground that the fine was excessive. On Nov. 10, the Court denied this application. Attorney-General Bonaparte thereupon petitioned the United States Supreme Court, on Nov. 20, for a writ of certiorari bringing up the evidence in the case for review by that tribunal. This petition was opposed by a brief filed by Standard Oil counsel, in which it was contended that "the policy of the law is against the review of a judgment in favor of the accused in a criminal case at the instance of the government." The brief contended that if shippers were to be held to a requirement of knowledge that the rates they accept are lawful, interstate commerce would be greatly restrained. The government's petition was dismissed (Jan. 4, 1909), leaving the case to be retried in the original court.

Of the numerous State prosecutions of the company, some were terminated during the year. On April 11, the Supreme Court of Tennessee forbade Standard Oil to do any business in that State. The most important suit of this sort however was that brought in 1907 by the State of Missouri against the Standard Oil Company of Indiana, the Republic Oil Company of Ohio, and the Waters-Pierce Company of Missouri. These companies were charged with conspiracy on four counts, namely, (1) to regulate and fix prices to retailers; (2) to control and limit the trade in the refined products of petroleum; (3) to prevent competition in the buying and selling of these products; (4) to mislead the public into the belief that they were separate and distinct corporations. The Supreme Court of Missouri sustained the charges and decreed that the Waters-

Pierce Company should be dissolved unless it should take steps by Jan. 15, 1909, to operate as an independent concern, and that the other two plaintiffs should be ousted from the State; besides each company was fined \$50,000. This was considered not only a personal victory for Attorney-General Hadley, but also a victory for State authority over corporations. There was, however, nothing in the decree preventing the Standard Oil Company of New Jersey organizing a new company to succeed the ousted subsidiaries. Nevertheless the Standard attorneys manifested considerable anxiety over the order of expulsion owing to the large investments of the company in that State, notably in the refinery at Sugar Creek near Kansas City. On Dec. 29, these attorneys announced that they would file a petition for a rehearing. On June 12, the District Court of Western New York sustained charges against the Company for accepting rebates. Motion for a new trial was filed at once.

A great sensation was created during the height of the political campaign by the reading from public platforms by Mr. Wm. R. Hearst of numerous letters purporting to be from the correspondence of John D. Archbold, vice-president of the company. The first of these letters, read in September, showed that Senator Foraker of Ohio and Governor Haskell of Oklahoma had at one time assisted in carrying out Standard Oil projects. The result was the prompt repudiation of Senator Foraker by prominent Republicans, and a most spirited exchange of controversial letters between President Roosevelt and W. J. Bryan, culminating in the resignation of Governor Haskell as treasurer of the Democratic campaign committee. The letters read in September also involved ex-Senator McLaurin of South Carolina. On Oct. 24, Mr. Hearst read more of these letters showing Mr. Archbold's intervention in the appointment of certain judges of the Superior and Supreme Courts of Pennsylvania and also implicating ex-Governor Wm. A. Stone. Finally, on Oct. 29, were read letters showing that Mr. Archbold had contributed annually from \$1250 to \$5000 to various newspapers and magazines, nominally as yearly subscriptions.

DISSOLUTION HEARINGS. The suit begun in Nov., 1906, in the United States Circuit Court at St. Louis, for the dissolution of the Standard Oil Company as a combination in restraint of trade in the manufacture and sale of petroleum, continued during the year; and Mr. Franklin Ferris, special examiner for the court, was still hearing evidence at the close of the year. During November and December, in hearings held at New York City, some of the leading officials of the company, including John D. Rockefeller and John D. Archbold, were subjected to examination. A number of field agents of the Standard, especially in the Southern States, were examined with reference to the control of its nominal rivals by the company, and it developed that in several cases, these were subsidiaries of the company, either organized by the company's agents or purchased by them. It was further testified that Standard agents used fraudulent lamp tests to prove competitors' oil of inferior quality; that oil was colored artificially, and misrepresented; and that rebates of from 50 per cent. to 75 per cent. were given to dealers in Standard Oil. Testimony was also made that

railroads carrying Standard Oil returned the Company's tank-cars free, while charging other companies \$105 per car.

Mr. Rockefeller's testimony traced the early history of the company until 1887, describing the fight with the Pennsylvania Railroad and the establishment of the rebate system. Mr. Archbold's testimony treated the affairs of the company from 1882 shortly after foundation to 1906. The refineries in that time had increased in value from \$14,000,000 to \$57,689,000, and the output had increased many times. Pipe lines now bring oil from the mid-continental fields to the Bayonne refinery, a distance of 1600 to 1700 miles. He contended that the company, by obtaining innumerable valuable by-products through its chemistry department, by protecting the customer from the exorbitant rates of local dealers, and by its building up of the export trade, had been of immense benefit to the country. He admitted that the company had contracted to supply oil to the People's Gas Company of Chicago at 1½ cents per gallon, if the latter would withdraw competition; and his testimony showed that the Indiana Company in seven years had earned \$5,500,000 on a capital stock of \$1,000,000; and that the Continental Oil Company had made a profit of 115 per cent. on a capital stock of \$300,000.

An interesting feature of the evidence submitted was a statistical study of prices by Professor Johnson of the School of Commerce of New York University. This showed in the main that the price of oil had not advanced more than prices of commodities in general, though a comparison of prices for 1895-96 with those of 1902-4 showed that, while prices in general rose 23 per cent., the price of oil rose 45 per cent. Other testimony was intended to show that the Standard Oil Company was not a pioneer in developing oil fields; that it gained its success by borrowing money and buying and improving competitors' plants; that agreements were made to restrict output; and that the company was a pioneer in obtaining rebates. Though many volumes of testimony have been taken, the hearings were resumed immediately after the holiday vacation. See RAILWAYS.

STANLEY, FREDERICK ARTHUR, Earl of Derby. A British statesman, died on June 14, 1908. He was born on Jan. 15, 1841, and succeeded his brother as sixteenth Earl of Derby in 1893. After a short service in the Guards he entered the House of Commons as a Conservative, was Financial Secretary for War from 1874 to 1877 and Financial Secretary to the Treasury in 1877 and 1878. He was Secretary of State for War during the last two years of the Disraeli ministry (1878-80), Secretary of State for the Colonies in the first Salisbury ministry (1885-86), and president of the Board of Trade in 1886-88. In 1888 he was created Lord Stanley of Preston and appointed Governor-General of Canada, where he remained until 1893.

STAR. See ASTRONOMY.

STATE BANKS. The report of the Comptroller of the Currency showed that there were 11,220 State banks in operation in the United States on or about June 30, 1908. They were located as follows: New England States, 19; Eastern, 406; Southern, 3312; Middle Western, 3689; Western, 2866; Pacific, 902; and island possessions, 26. Missouri had the greatest number with 934; Kansas had 740; Minnesota, 607,

and Nebraska, 598. State banks are in operation in every State and Territory except Maine, Vermont and Rhode Island. The aggregate resources of State banks in 1908 were \$4,032,038,000, a very slight decrease during the year. The principal items of resources were: Loans on real estate, \$188,352,000; other loans and discounts, \$2,218,000,000; stocks and bonds, \$502,436,000; due from other banks, \$549,297,000; cash and checks, \$379,987,000. The liabilities included: capital stock, \$502,513,000; surplus and other profits, \$303,615,000; deposits, \$2,937,129,000; due other banks, \$207,432,000. These items varied little from those for 1907, except for a moderate increase in capital stock, surplus and undivided profits, and cash on hand. A comparison, however, with returns for 1904 shows an increase of \$1,168,894,000 in aggregate resources, \$155,092,000 in capital stock, and \$863,911,000 in deposits.

States ranking first in amount of capital invested in State banks were: Illinois, \$52,460,000; Ohio, \$38,950,700; and New York, \$33,283,000. Illinois also ranked first in deposits held by such banks, with \$427,277,000; New York second, with \$375,956,000; and Ohio third, with \$304,845,000.

Comparing the condition of State banks with the aggregate of banking statistics of the United States, shows that in 1908 they had 28.8 per cent. of the total banking capital, 17 per cent. of the total surplus and undivided profits, 20 per cent. of the aggregate resources, and 23 per cent. of the loans, of the cash on hand, and of the individual deposits. See BANKS AND BANKING.

STEAM ENGINE. See STEAM TURBINES.

STEAM TURBINES. An interesting report of the economic possibilities of exhaust steam low pressure turbines was made during the year based on data of three different plants: the Cambridge Electric Light Company and the Philadelphia Rapid Transit Company's plant and also from that of the Scranton Street Railway, figured in a paper read by Charles B. Burleigh before the National Association of Cotton Manufacturers. The profitable use of the turbine was shown in striking form at the Philadelphia station, where with an increase of 10 per cent. in station capacity provided by the first turbine used, there was a saving of 105 tons of coal consumed per month. In the following year 1906-7 with two turbines in use there was an increase output of energy of 19.5 per cent. and a saving in coal of about \$230 per month in fuel. The turbine lends itself conveniently as the machine to use low pressure steam, and it is here its economy lies as the above statement and the record below of its use at sea with the reciprocating engine testify. As to its use at higher pressures there was not the same unanimity of opinion, especially for driving generators. Nevertheless the use of steam turbines of large size, especially for central station work, had become well established before 1908, but the use of such units of less than 300 horse-power was comparatively slow, though by that year a wide diversity of uses had been found for turbines of this class. These applications, excellently summarized by C. A. Howard (*Engineering Magazine*, Jan., 1909), include their use for driving exciters, for centrifugal boiler-feed pumps, centrifugal hot-well pumps for condensers, fans for forced and induced draft, and for driving small

main generators. These illustrated but a few of the uses that the small turbine had found, but it indicated the variety, and showed that, especially where rotary machinery was to be direct driven, the steam turbine could be used. Thus in ventilating fans for mines it has proved successful and especially in driving the generator for railway train lighting, the turbine driven unit of about 25 kilowatts capacity being located for this purpose either on top of the boiler or back in the baggage car, the space occupied being far less than with any form of reciprocating engine. For driving the blowers for gas works and foundry cupolas the turbine is found to be very useful as the blower can be brought up to full speed in the shortest possible time, much less than with a reciprocating engine. The turbine also found a useful place in isolated lighting plants. In summing up the present status of the small steam turbine, after referring to the fact that when the cost of the complete unit for a given service is considered, whether it be fan, generator, or pump, the total cost will in almost every instance be much lower for the higher speed turbine-driven installation, which will also occupy very much less space, Mr. Howard concludes, "It must not be inferred that the advent of the steam turbine will drive the engine out of use. This will probably never take place. The steam engine as built today is probably more intelligently and carefully designed and constructed and better and more widely used than any other machine in use. There are many conditions to which the reciprocating engine will continue to be better adapted than any other type of prime mover. When electricity came into extensive use for lighting, many people thought that the gas companies would have to go out of business, but they are still just as busy as ever. In their future development the engine and the turbine should each seek the field which it can fill."

The innovation of a combination of two reciprocating engines driving outside propellers and low pressure turbine on the centre line of the vessel introduced into the White Star Steamship *Laurentic* was an engineering construction from which much was expected and this 14,500 ton liner seemed in the way to make a record for efficiency of operation though not designed for extreme speed. A combination of reciprocating engines and turbines was also planned for the two monster ships *Olympic* and *Titanic*. (See SHIPBUILDING.) The idea however found actual application in the British merchant steamer *Otaki*, a vessel for the New Zealand trade 464 feet in length which had its trial trip in November. The twin screws are driven by triple expansion engines.

In the United States Navy three scout cruisers of 4580 tons displacement each, fitted with Curtis and Parsons turbines and reciprocating engines respectively, were tested under similar conditions. The *Salem* with the Curtis turbines made on her trial trip an average speed of 25.94 knots or better speed than the *Birmingham*, 24.32 knots, which had reciprocating engines: while the *Chester*, with Parsons turbines, showed superior economy to the *Salem* at all speeds, attaining on full speed trial with the same coal consumption an extra speed representing about 14 per cent. additional effective horse-power and making a speed record of

26.52 knots. Further trials were planned for these ships.

A paper was published during the year by R. Caird (*Cassiers' Magazine*, Nov., 1908), on "Piston Engines versus Turbines on the Atlantic," in which was a comparison of the *Kaiser Wilhelm II.*, which, previous to the *Lusitania* and *Mauretania*, had held the speed record, and the Cunard turbine steamer *Lusitania*. It here was argued that the *Kaiser Wilhelm II.* was about 15 per cent. more efficient than the *Lusitania*, and that if the latter were driven by three sets of quadruple expansion engines the required speed and power would be obtained with a gain of propulsion efficiency on shaft horse-power of almost 12 per cent.

STEDMAN, EDMUND CLARENCE. An American poet and critic, died on Jan. 18, 1908. He was born in Hartford, Conn., on Oct. 8, 1833, and from his fifth year (when his father died), until he was sixteen he lived with his uncle, in Norwich. He entered Yale in 1849, but was suspended at the end of his sophomore year for a breach of discipline. His college, however, in 1871 restored him to his class and gave him the degree of M. A. He edited the *Norwich (Conn.) Tribune* in 1852-53, and the *Winsted (Conn.) Herald* in 1854-55, when he went to New York City, where he was a member of the staff of the *Tribune* in 1859-61. He was a war correspondent for the *New York World* in 1861-63 at the headquarters of General McDowell and of General McClellan, and he then (1864) held a confidential position under United States Attorney-General Bates. In the same year he became connected with the Union Pacific Railroad, an association which resulted in his entering commercial life. He became a member of the New York Stock Exchange in 1869 and retained his seat until 1900. During this interval, though he was actively engaged as a broker, he continued his literary work. He was at first successful in his business, but afterward had serious reverses (due chiefly to mismanagement by one of his associates) which consumed practically all of his means, with the result that in his later years, and with his health often poor, he was dependent largely upon his pen for his livelihood. As a poet, Mr. Stedman became first generally known probably through his verse contributed to the *New York Tribune*, and especially his ballad, *How Old Brown Took Harper's Ferry*. Of his longer poems, mention should be made of *Alice of Monmouth* and *The Blameless Prince*, while of the shorter ones, *Stanzas for Music*, *The Doorstep*, *Toujours Amour*, *Ariel*, and *Pan in Wall Street* are perhaps as well known as any. The best of his critical work is included in his *Victorian Poets* (1875); 13 ed 1887), *Poets of America* (1885), and *The Nature and Elements of Poetry* (1892)—the last named comprising his lectures on the Turnbull foundation at Johns Hopkins in 1891. Substantial contributions to literature were his *Victorian Anthology* (1895) and *American Anthology* (1900), both valuable and, in the main, discriminating collections of the best English and American poetry for the periods indicated. His other publications include, *Poems Lyric and Idyllic* (1860); *The Battle of Bull Run* (1861); *Alice of Monmouth: an Idyl of the Great War, and Other Poems* (1864); *The Blameless Prince, and Other Poems* (1869); *Poetical Works*, collective edi-

tion (1873); *Hawthorne, and Other Poems* (1877); *Poems*, household edition (1884); *Works* (4 vols., 1885); *Poems Now First Collected* (1897); *Mater Coronata* (1901) and *Hymn of the West* (1904). He edited *Cameos from the Poems of W. S. Landor*, with T. B. Aldrich (1874); *Poems of Austin Dobson* (1880); *Elizabeth Stoddard's Novels* (1888-89); *A Library of American Literature*, with Ellen Mackay Hutchinson (11 vols. 1888-89); *The Works of Edgar Allen Poe*, with Prof. G. E. Woodberry (10 vols., 1895), and *History of the New York Stock Exchange* (3 vols. 1904-6). Mr. Stedman succeeded James Russell Lowell as president of the American Copyright League in 1891, and was president of the National Institute of Arts and Letters in 1904-05.

STEIN, M. A. See EXPLORATION.

STELLAR SPECTRA. See ASTRONOMY.

STERNBURG, HERMANN SPECK VON. A German diplomatist, ambassador to the United States, died on Aug. 23, 1908. He was born at Leeds, England, on Aug. 21, 1852, and received his education in Germany, making a specialty of military and naval science, international law, and political economy. After completing his education, he entered the military service, serving throughout the Franco-German war, and in 1885 became military attaché to the German legation at Washington. He was reappointed in 1889 and promoted to the rank of major. The following year he entered the diplomatic service, being first appointed secretary to the legation at Peking, and afterward chargé d'affaires at Belgrade, Servia. In 1898 he became first secretary to the German embassy at Washington, and also served as German high commissioner on the Samoan Commission. He was appointed consul-general for British India and Ceylon in 1900, and subsequently was sent to the United States as a special representative to settle the Venezuelan claims. In July, 1903, he was made German ambassador to the United States. It was through his efforts in 1906 that the German government agreed to make a tariff arrangement under which the old commercial treaty would hold good for another year, provided American customs officials would modify certain of their appraisal practices. This postponement gave the two governments an opportunity to make a satisfactory commercial agreement, which agreement, as drawn up, was largely the work of Baron von Sternburg.

STEVENS, DURHAM WHITE. Diplomatic adviser to the Korean government, died on Mar. 25, 1908. He was born at Washington on Feb. 1, 1852; graduated at Oberlin College in 1871, and attended the Columbian Law School, Washington, until 1873, when he went to Japan to become secretary of the United States legation at Tokio. In 1883 he resigned this position and was made counsellor of the Japanese legation at Washington. He subsequently was legal adviser in the foreign office at Tokio; was attached to the embassy sent to Korea by Japan to settle questions which had arisen between Japan and China; was a member of the legation at Washington, when the Mexican treaty and treaties with the United States and Japan were revised; and was Japanese agent to Hawaii. In Dec., 1904, he was appointed diplomatic adviser to the Korean government. He was shot at San Francisco on Mar. 23, 1908, by Koreans, who

were instigated by that faction in Korea, which resented what it considered to be the oppressive overlordship of Japan. In Mar., 1908, the Mikado bestowed upon Mr. Stevens the Order of the Grand Rising Sun. Mr. Stevens' family was to receive \$100,000 from the Japanese government.

STEVENS, FRANCIS B. An American civil engineer, died on May 24, 1908. He was born at Trenton, N. J., on Oct. 16, 1814, studied at New York University, became a civil engineer, and made the surveys between Camden and Trenton, where the lines of the Pennsylvania Railroad now run. He was also prominent as an inventor, his most valuable invention being that known as the "Stevens cut-off."

STEWART, ALEXANDER PETER. An American Confederate soldier, died at Biloxi, Miss., on Aug. 30, 1908. He was born at Rogersville, Tenn., on Oct. 2, 1821, and graduated at the United States Military Academy in 1842. He served three years in the army as lieutenant of artillery and resigned in 1845, became professor of mathematics and philosophy at Cumberland University, and later at the University of Nashville. At the beginning of the Civil War he was major of Tennessee troops, and on the secession of that State became a brigadier-general in the Confederate army. He commanded a brigade at Shiloh, Perryville, and Stone River, was made major-general and commanded the division of Hood's Corps at Chickamauga which broke the Federal centre. He led his division through the Georgia campaign of 1864 until June 23, when he succeeded General Polk, in command of the latter's corps. He distinguished himself at the battle of New Hope Church, commanded his corps during Hood's campaign in Tennessee, and was in the last engagements of Johnson's army in North Carolina. After the war he was chancellor of the University of Mississippi from 1874 to 1888 and in 1890 was appointed a member of the Chickamauga National Park Commission.

STEWART, JOHN WOLCOTT. An American politician, United States Senator (Republican) from Vermont. He was born at Middlebury, Vt., on Nov. 24, 1825, graduated at Middlebury College in 1846 and was admitted to the bar in 1850. He was prosecuting attorney from 1852 to 1854, member of the lower house of the State Legislature in 1856, 1857, 1864, 1865, 1866, 1867 and 1876, serving as Speaker from 1865 to 1867 and in 1876; and State Senator in 1861 and 1862. In 1870-71 he was Governor of Vermont, and in 1822 was elected Representative to Congress, where he remained until 1891. On Mar. 24, 1908, he was appointed United States Senator *ad interim* by Governor Fletcher D. Proctor to fill the vacancy caused by the death of Redfield Proctor (q. v.). His term expired on Oct. 21, 1908, when the State Legislature elected Carroll S. Page (q. v.) to fill the unexpired term.

STEWART, WILLIAM F. An American soldier, whose so-called "exile" to Fort Grant, Arizona, created considerable comment in 1908. See UNITED STATES, Army.

STOCK RAISING. The Bureau of Statistics of the Department of Agriculture made the following estimate of the number and value of farm animals on farms and ranges on Jan. 1, 1909.

Farm Animals	Numbers	Av. price per head	Total value
Horses, 1909.....	20,640,000	\$95.64	\$1,974,052,000
" 1908.....	19,992,000	93.41	1,867,530,000
Average, 1898-1907..		60.25	
Mules, 1909.....	4,053,000	107.84	437,082,000
" 1908.....	3,869,000	107.76	416,939,000
Average 1898-1907..		72.30	
Milch cows, 1909..	21,720,000	32.36	702,945,000
" 1908.....	21,194,000	30.67	650,057,000
Average 1898-1907..		29.52	
Other Cattle, 1909..	49,379,000	17.49	863,754,000
" 1908.....	50,073,000	16.89	845,938,000
Average 1898-1907..		19.02	
Sheep, 1909.....	56,084,000	3.43	192,632,000
" 1908.....	54,631,000	3.88	211,736,000
Average, 1898-1907..		2.92	
Swine, 1909.....	54,147,000	6.55	354,794,000
" 1908.....	56,084,000	6.05	339,030,000
Average, 1898-1907..		6.07	
Total value of all animals Jan. 1, 1909			\$4,525,259,000
Total value of all animals Jan. 1, 1908			4,331,230,000
Increase of since Jan. 1, 1908.....			194,029,000

Imports and exports of live animals during the calendar year 1908:

	Imports		Exports	
	No.	Value	No.	Value
Cattle	112,102	\$1,599,037	277,036	\$24,034,193
Horses	5,224	1,435,315	18,516	2,893,344
Mules			4,925	823,952
Sheep	125,566	547,954	100,644	605,792
Swine			29,005	256,938
Others, including fowls		494,539		235,196

Estimated number of live stock in the principal foreign countries:

	Cattle	Sheep	Swine	Horses
British Isles	5,700,000	29,900,000	4,000,000	2,100,000
Australia ..	9,200,000	81,700,000	900,000	1,700,000
New Zealand	1,800,000	21,000,000	200,000	400,000
Canada	5,600,000	2,500,000	2,400,000	1,600,000
South Africa	3,900,000	20,700,000	700,000	500,000
India	52,100,000	18,000,000		1,300,000
Russia	31,000,000	38,000,000		20,000,000
Germany ..	20,000,000		18,000,000	4,000,000
France	14,000,000	17,000,000	7,000,000	3,000,000
Argentina ..	29,000,000	67,000,000	1,500,000	7,500,000

In the above figures the number of cattle credited to India was not complete, as it does not include calves, 13,000,000 buffaloes, or 25,000,000 goats.

The Secretary of Agriculture reports that the value of animals sold and slaughtered, and of animal products in the United States, amounted to nearly \$3,000,000,000, or about three-eighths of the value of all farm products estimated upon the census basis. The increase in value was due to the increase in the number of animals, and to an advance in price. Animals and animal products contributed about 16 per cent. to the value of the total exports in 1908. The exports of hides and packing house pro-

ducts amounted to \$196,000,000, the imports, \$66,000,000.

CATTLE. The cattle industry continued to increase, having suffered little from the financial panic of 1907. There was a decrease in the stocker and feeder trade at most of the Missouri River markets, but Chicago shipped 360,000, or 27,000 more cattle of this class than in 1907. A number of minor markets have grown in importance, as Milwaukee, St. Paul, Sioux City, Indianapolis, Wichita, Denver, and Fort Worth, though many of these markets are increasing faster in sales of hogs than in cattle. Fort Worth did a feeder trade of 115,000 head, as against 87,000 in 1907. The cattle business was changing somewhat in character and big cattlemen were not so common as formerly. The rapidity of the change has been checked somewhat by the opening of thousands of acres of range land which had been unlawfully fenced in. Some of the big ranchers are now locating in Mexico. Tendencies indicate that the range stock industry of the future would be confined to those regions that are too rough for cultivation, or too arid for the successful growth of crops. The number of cattle fed by the small stockman, who is, to some extent, a farmer, was increasing rapidly. The result was a better quality of beef that goes to market. Baby beef is growing in popularity, but it calls for skill on the part of the feeder. Cheap land in the South Atlantic and Gulf States awakened cattlemen to the opportunities in that section. Canada and the United States have the advantage over other countries in being able to ship live cattle to Great Britain. In spite of this, in Canada the exports of beef cattle fell off, due, in part, to the greater interest taken in dairying, especially in the eastern provinces. Argentina was competing successfully with other countries in the dressed beef trade. The exportation of cattle from Porto Rico to other parts of the West Indies, formerly quite extensive, practically ceased, for, since there has been free trade with the United States, sugar has replaced cattle as a source of revenue. In Alaska Galloway cattle have demonstrated their ability to withstand winter conditions without shelter except an open shed.

Feeding stuffs were high in price, and this resulted in a search for new feeds, cheaper methods of raising the common grains and fodder crops, and the adulteration of concentrated commercial feeds. Rice hulls, cotton seed hulls, and corn cobs were common adulterants found in the United States. In Europe a great many adulterants were found in feeds, and being a common one.

HORSES. The year 1908 witnessed renewed interest in breeding both light and draft horses. The coöperative work of the Department of Agriculture in breeding Morgan horses in Vermont, draft horses in Iowa, and carriage horses in Colorado was continued. A uniform system for the classification of carriage horses was adopted by State fair authorities with success. At the last session of the New Jersey Legislature \$20,000 was appropriated to purchase and maintain stallions of the draft and coach type for the use of farmers' organizations, as authorized by a commission. After visiting various European countries, 8 Percherons, 3 Clydesdales, a hackney, and a heavy harness horse were purchased, all of which were to be loaned to farmers' breeders' associations to produce a more marketable.

as well as a more serviceable, horse. In Denmark, where the draft horse had been well developed, some attention is now being given to improving the lighter types.

SHEEP. The year 1908 witnessed an increase of 1,453,000 in the numbers of sheep in the United States, but a decrease in total value of \$19,104,000, as a result of the drop in price per head from \$3.88 to \$3.43. In New Mexico and Arizona there was a large increase in the number of sheep fit for shearing, though Wyoming and Montana were still the leading wool producing States. The total wool clipped for the country, including pulled wool, was about 300,000,000 pounds, equal to 135,000,000 pounds of scoured wool, valued at \$61,700,000. The average weight of fleece was 6.7 pounds, a slight increase over 1907. There were 168,691 pounds of raw wool exported, valued at \$34,554. The imports of raw wool amounted to 142,558,344 pounds, valued at \$23,304,465. Argentina sent 7,000,000 pounds less of wool to the United States than in 1907. On the whole, 1908 was an unsatisfactory year for the sheep industry, but the outlook was brighter at the end of the year. In the fall of 1907 prices began to ebb, and during 1908 were about 15 per cent lower than the previous year.

SWINE. The swine industry increased in all stock-raising countries. Although in the United States there was a decrease in number, there was a rise in value. Following the lead of Denmark, coöperative bacon factories were started in some other countries. The lard hog, once so popular in the Mississippi Valley, was giving way to the bacon type. Though for years many pigs were fattened on corn alone, experimental work amply demonstrated the advantage of adding some supplementary feed to corn, especially during the early part of the fattening period. At the Indiana station soy bean meal was found to be a home-grown product equal to linseed meal as a supplement to corn. At the Alabama station peanuts and soy beans made a satisfactory ration for hogs. At the Nebraska station swine feeds rich in phosphates and other mineral matter increased the strength of bones. In Germany a series of coöperative experiments have demonstrated that skim milk and steamed potatoes are the best home-grown feed for pigs.

POULTRY. The Secretary of Agriculture, in his report for 1908, stated that the eggs and poultry produced on the farm were worth \$6,000,000, or as much as the cotton crop, the hay crop, or the wheat crop. To obtain the total value of the poultry industry, the poultry products of cities and villages should be added to the above estimate, as they are not included in the census reports. The mean farm price of eggs per dozen in the United States was 11.15 cents in 1899, 17.02 cents in 1907, and 18.3 cents in 1908. The mean wholesale price per pound of dressed poultry in New York was 11.15 cents in 1899, 14.9 cents in 1907, and 13.56 cents in 1908. Plymouth Rocks, Wyandottes, and Rhode Island Reds, all breeds of American origin, were growing in popularity, both at home and abroad. In Germany Wyandottes were supplanting many of the older breeds. The Orpington, an English breed, was growing in favor. At the 20th Annual Exhibition of the New York Poultry Association, in 1908, the largest ever held in this country, there were 2,613 entries in all, of which 465 were Orpingtons. The largest poultry show ever held was at Crystal Palace, near London,

with 10,625 entries. The breeding of poultry for high egg production was stimulated by egg laying contests in different parts of the world. In a six months' test in Australia the average egg yield was 171 eggs per hen, the cost of feed \$1.40, and the average profit \$2.16. The Cuckoo Leghorn led the other breeds, averaging 190.16 eggs per hen. In Denmark, Sweden, and Germany the establishment of breeding stations had much influence in the improvement of the methods of breeding and feeding poultry.

BREEDING. The interest in breeding problems was increasing, as was witnessed by the activity of breeders' associations and by investigations of the laws of inheritance. There were 135 certified pedigree record associations in the United States. The Department of Agriculture was co-operating with a number of the State stations to solve breeding problems, and at its experimental farm in Maryland was conducting experiments in telegony, inbreeding, and hybridizing.

STOCKS AND BONDS. See FINANCIAL REVIEW.

STONE, WILLIAM LEETE. An American historical writer, died on June 11, 1908. He was born in New York city on April 4, 1835; graduated at Brown University in 1858, and the following year was admitted to the bar. He was centennial historian for New York State, a member of numerous historical societies and associations in the United States and Canada, and a member of the Royal Society of Copenhagen. His writings, which deal principally with the Revolutionary period, include: *The Life and Times of Sir William Johnson, Bart.*; *Revolutionary Letters*; *Burgoyne's Campaign and St. Leger's Expedition*; *The Saratoga Battle Grounds*; *The Life of Governor George Clinton*; *History of New York City*.

STORAGE BATTERY. In the latter part of 1907 Edison's much talked of iron-nickel storage battery was put on the market and promised to fulfill the long felt need of a light battery for traction work. Unfortunately, a few months' use of these batteries in actual service developed a number of weak points; in particular, it was found that the active material was rapidly precipitated from the surface of the plates. The manufacturers therefore stopped the sale of the battery until this defect could be overcome; toward the end of the year it was claimed that a satisfactory solution of this difficulty had been reached. In the manufacture of the lead accumulator there was manifested during the year a tendency to return to the earlier form of Planté plates having a thicker web, on account of the increased durability of such plates, even though this necessitates an increase in cost and weight and a decrease in capacity. The high capacity plates having a thin web and large exposed surface have too short a life to be economical. The application of storage batteries to alternating current systems, supplying a fluctuating load, has opened up a new field of usefulness for this piece of apparatus, and has incidentally brought about considerable improvement in the split phase rotary converter and the alternating current booster. The former is a rotary converter so designed that the voltage on the direct current side may be varied within wide limits with a constant alternating current voltage impressed on the slip rings. By automatically varying the direct current voltage, charge and discharge of the bat-

tery is effected in the usual manner. The alternating current booster is used with an ordinary rotary converter and is so connected in the circuit that the voltage of the alternating current supplied to the converter is automatically raised or lowered, the direct-current voltage therefore varies in the same manner, and the battery thus automatically receives energy or gives it out to the line. During the year the price of storage batteries was materially reduced. Unless the price is again raised when commercial conditions improve it was thought that this apparatus would undoubtedly be used much more extensively than formerly, as its high cost was one of the chief obstacles in the way of its general application to railway and lighting work, particularly for carrying peak loads.

STRACHEY, SIR RICHARD. An English colonial official and scientist, died on February 12, 1908. He was born on July 24, 1817, served in the Sutlej campaign in 1845-46, was secretary of the Government Central Provinces in 1857-58, public works secretary to the government of India in 1862, and inspector general of irrigation in 1867. In 1878-80 he was president of the Famine Commission; in 1892 a member of Lord Herschel's Committee on Indian Currency; in 1883-1905 chairman of the Meteorological Council, and in 1888-90 president of the Royal Geographical Society. He also served as chairman of the East Indian Railway Company in 1889-1907, and as chairman of the Assam-Bengal Railway Company in 1892-1907. He was awarded a royal medal by the Royal Society in 1897 for his report, in 1888, on the barometrical disturbances and sounds produced by the eruption of Krakatoa, and his paper in the *Philosophical Transactions* of 1893 on the "Harmonic Analysis of Hourly Observations of the Temperature and Pressure at British Observatories." He is also credited with having been first to consider scientifically the physical and botanical geography, geology, and meteorology of the Western Himalayas.

STRAITS SETTLEMENTS. A British colony, comprising some of the British possessions on the Malay Peninsula (Province Wellesley, Malacca, and the Dindings), some of the adjacent islands (Singapore, Penang, Pangkor, etc.), and some distant islands—Cocos or Keeling, Christmas and Labuan (qq. v.). Excluding the distant attachments, the total area is 1,542 square miles, and the total population was estimated in 1906 at 611,790, mostly Malays and Chinese. The population of the principal cities in 1901 was: Singapore, 193,089; Georgetown, the capital of Penang, 94,086; Malacca, 15,586. The principal products, with the quantities of their exports in 1907 (tons of 2,240 pounds), are: Copra, 56,830; coffee, 4,635; gambier, 28,027; gum copal, 10,023; gutta-percha, 3,064; gutta jelotong, 14,941; raw hides, 3,254; nutmegs, 794; black pepper, 16,016; white pepper, 6,296; rubber, 2,521 tons; rattans, 18,267; sago flour, 47,672; sago pearl, 3,507; tapioca flake, flour, and pearl, 30,902; tin, 52,557; pineapples, 759,392 (cases). Other products and exports are: Cloves, cubes, gum benjamin and dammar, tanned hides, isinglass, Malacca canes, mace, and sticlac. Rubber plantations are rapidly extending. The number of estate laborers in 1907 was 14,886, consisting of Tamils, Javanese, Chinese, and Malays. The imports and exports in 1907 amount-

ed to 350,570,202 and 305,301,907 dollars (of about 50 cents each) respectively, excluding the inter-settlement trade of 28,185,224 dollars both ways. The principal imports were valued as follows, in dollars: Fish, 9,332,827; rice, 34,136,846; spices, 13,030,119; gums, dyes, and resins, 14,676,969; tin, 25,609,395; tin ore, 54,517,992; copra, 9,870,216; cotton goods, 24,747,238; metal manufactures, 13,493,143. The principal exports were, in dollars: Rice, 34,559,419; opium, 8,757,920; areca nuts, 5,714,728; pepper, 8,881,949; sugar, 7,196,408; tapioca, 8,221,564; copra, 9,447,709; tin, 83,207,807. The trade is largely transit in character. The trade with the principal countries of import and export in 1907 was as follows, in dollars:

From and to	Imports	Exports
Great Britain	49,434,985	75,625,713
Australasia	6,878,088	1,534,585
British India	42,354,776	17,835,160
Hongkong	32,260,198	12,539,285
Federated Malay States	74,415,648	41,587,500
Sarawak	5,016,755	3,940,804
Total British Empire	212,340,119	158,535,051
Austria-Hungary	1,675,068	2,790,896
Belgium	2,375,789	2,390,468
China	6,834,237	4,636,194
France	1,854,721	10,665,639
French possessions	8,070,601	3,037,446
Germany	6,396,845	6,703,756
Netherlands	2,661,192	1,541,603
Italy	2,826,333	5,275,437
Japan	6,995,958	2,564,855
Dutch India	49,665,632	45,604,915
Siam	30,180,867	18,536,896
United States	3,592,494	28,450,090

The aggregate trade of Singapore in 1907, including inter-settlement trade was 481,027,041 dollars, the value of exported tin being 43,928,746 dollars. The aggregate trade of Penang was 193,490,300 dollars, the export of tin being 39,279,661 dollars. A large part of the transit trade of Singapore has of late been diverted to Macassar, on Celebes, Dutch East Indies. In 1906 there were 8 miles of railway and 1,567 miles of telegraph lines. The revenue in 1907 was 10,023,016; expenditure, 9,499,693; and public debt, 5,000,000 dollars. At Singapore there was, in 1908, a British garrison of 2,355. The governor in 1908 was Sir John Anderson. At Penang and Malacca there are residents.

The railway connecting Singapore with Penang and passing through Johore was opened on Dec. 12, 1908. Its cost was placed at £1,283,000. It opens up important tin and rubber regions of Federated States.

STREET CLEANING. Like the collection and disposal of garbage and other city wastes (see GARBAGE AND REFUSE DISPOSAL), street cleaning in the United States suffers through politics, ignorance, and neglect, and never will be properly conducted until it is put on a thorough-going business and engineering basis. A notable study of street cleaning, which, though primarily local in character, was virtually a treatise on that and the closely allied subject of city waste disposal, was published early in 1908. This study was made at the instance of Mr. George B. McClellan, Mayor of New York City, by a commission of engineers (see GARBAGE DISPOSAL for reference). The report described street cleaning and waste disposal methods in use in New York City and in various foreign cities, and included estimates of cost of various methods of street cleaning in use to-day. A

point worthy of particular note was the assertion of the commission that "the efforts of street cleaning departments of nearly every city are principally directed to the removal of dirt in its gross or primary form; or, rather, the methods of cleaning in common use remove only the coarser fragments, leaving the mud and dust upon the surface of the street." The mud "pollutes the feet and clothing of human beings," and the dust fills the air of streets and buildings alike. Both mud and dust spread disease germs (particularly tuberculosis or consumption), besides doing much damage to property and causing endless annoyance.

The improved method of hand-hose flushing suggested involved the use of a 1-inch nozzle and a fan-shaped jet having its longer axis parallel to the surface of the pavement, with a water pressure of 30 pounds per square inch, instead of using an ordinary nozzle of 1¼-inch diameter, under 40 pounds pressure. The improved nozzle requires much less water than the ordinary one, besides being more efficient otherwise. Coöperation between the street cleaning and other city departments was urged, as also the great importance of improved means of accounting and cost-keeping.

STREET PAVEMENTS. See PAVEMENTS AND ROADS.

STRIKES AND LOCKOUTS. UNITED STATES. Although 1908 was a year of marked industrial depression, it was not at all notable for industrial disturbances. This was due to a variety of causes, among which were the activities of the Government Board of Mediation and Arbitration, the intervention of State bureaus of labor, the more frequent resort by employer and employees to conciliatory methods, and the policy of many employers in reducing output and the expenses of production by diminishing their labor force, instead of reducing wages.

In August occurred a strike in the Alabama coal mines of the Birmingham district. This strike was marked by unusual violence. On August 9, rioting resulted in the killing of three and the wounding of eleven. This was followed by the arrest of thirty men, one of whom was the president of the local miners' union. Shortly afterward four houses owned by non-union negroes were dynamited, leading to the arrest of fifteen of the strikers. The State militia was sent to Birmingham, but the district was not put under martial law. On September 3 the strike was declared off, several thousand of the men returning to work on a non-union basis. This strike was reported to have collapsed because the unions recognized their inability to cope successfully with the mine owners. Other strikes by coal miners included that at Charleston, West Virginia, involving fourteen mines, on account of a proposed reduction of wages, and that at Marion, Illinois, on account of the inferior quality of powder furnished by the company. In November occurred a strike of the workers in the clay pits, kilns, and plants of the National Fire-proofing Company and of several independent companies near Perth Amboy and Keasbey, New Jersey. The strikers had been working on short time at wages amounting to less than a dollar for a ten-hour day. They were without organization, being mostly Magyars, Poles, and Slovaks. They claimed to have understood that they were to receive increased pay if Taft were elected. While no serious rioting occurred, Governor Fort sent six com-

panies of the New Jersey National Guard to protect the properties, with orders to "strike hard" in case of rioting. On several occasions groups of disorderly strikers were fired upon by the soldiers. On Thanksgiving Day the Great Eastern Company agreed to take back all of its 600 men at a wage rate of \$1.30 for a ten-hour day. Hungarian and Polish priests endeavored to induce the employees of the National Fire-proofing Company to accept the \$1.40 offered by that company. The strikers finally accepted this rate, instead of the rate of \$1.50 per day for which they had contended. An investigation of the working conditions and living expenses of those engaged in this strike by A. P. Kellogg of the Charity Organization Society led him to the conclusion that this rate was too low to maintain that standard of living necessary to transform immigrants from central and southern Europe into American citizens. In September and October there occurred in New York city a strike of the taxicab chauffeurs, who demanded increased pay. Strike breakers were at once secured to take their places, and violent disturbances followed. The strike breakers were maliciously assaulted and taxicabs were stoned and in some cases stolen. Early in October an injunction was secured forbidding interference with the operating company. During the Christmas holidays about 2,500 cab drivers and chauffeurs in the same city, belonging to the Liberty Dawn Coach-Drivers' Association and the United Teamsters of America, went out on strike. The strikers demanded twelve hours freedom each day and a minimum salary of \$15 per week. About 45 stables and garages owned by members of the Livery Stable Owners' Association were affected. Strike breakers were soon employed, but the continuous assaults characterizing the preceding strike were not repeated. By the close of the year most of the strikers had returned to work.

CANADA. The year in Canada was notable for a scarcity of strikes, a condition to be attributed in a very large measure to the operation of the Industrial Disputes Investigation Act of 1907. (See INDUSTRIAL ARBITRATION AND CONCILIATION.) This law does not require the acceptance by the parties to a labor dispute of the award of an arbitration board, and hence dissatisfaction on the part of either disputant may lead to a lockout or a strike. This was the case with the most important strike of the year, the strike of the employees in the mechanical and car departments of the Canadian Pacific Railroad. This railroad builds its own cars and locomotives. In April the company served notice on its employees in the shops in Winnipeg that it would reduce the wages of one class of boiler makers, increase the proportion of apprentices to journeymen, and employ men who had not served full apprenticeship. The men of the Federated Trades of the mechanical and car departments refused to accept the new conditions. Under the law of 1907 a conciliation board was formed, composed of one representative of the men and one of the company and a chairman chosen by these two. The deliberations and investigations of this board occupied two months, during which work continued. The chairman and the representatives of the company agreed on a majority report favoring the company on the first and third points in dispute and compromising on the subject of increased apprentices. The representative of the

men sent in a minority report. On August 1 the company put into effect the findings of the majority, and three days later machinists and mechanics to the number of about 9,000, in shops all along the line, went out on strike. Early in September many of the French Canadian machinists on strike returned to work, upon the advice of their clergy. These constituted almost one-half of the strikers. Moreover, the strike received little support from public opinion, and proved to be ill-timed. On October 5 it ended in complete defeat, the strikers vigorously denouncing their leaders for poor generalship. Two days later the company restored the union men to their positions. Another noteworthy strike was that of the employees of the cotton mills at Montreal, Hochelaga, and Valleyfield, lasting through part of May and all of June. The strikers demanded increased pay. They were, however, forced to yield, largely because of general trade conditions, returning to work on July 1 at the old rates.

ENGLAND. The year was notable for the great number of industrial disturbances. There were more trade disputes, involving more industries and workmen, than in any year in a decade. The disputes arose mainly from resistance to wage reductions, and, on account of a declining market and stocks already on hand, usually ended unfavorably to workmen. From January 1 to December 1 there were 357 disputes, involving 297,854 men, and resulting in an aggregate loss of 10,506,000 days of work and three million pounds in wages. This was five times the loss in the same period in 1907. In addition to these unusual conditions, the extent of unemployment (q. v.) was most serious. Resistance to wage reduction was the cause of one of the largest strikes of recent years. In the Manchester cotton mills wages had been advanced by 18 per cent since 1893, the last advance being 5 per cent in June, 1907. Early in 1908 a reduction was proposed by the employers. In August the Federation of Master Cotton Spinners of the Manchester district, by a majority of 92 per cent, decided to resort to lockout if necessary to enforce a reduction of 5 per cent. in wages, to take effect January 1, 1909. One month's notice of this intention was given to the employees. The latter refused to agree to the reduction, with the result that about 400 mills were closed on September 21, between 130,000 and 140,000 operatives being thrown out of work. After more than seven weeks, a compromise was effected in the first week in December, whereby the proposed reduction will not take place until March. This strike well illustrated the ruinous effects of industrial war. The loss in wages alone approximated \$18,000,000; and when to this was added the loss to the mills, to the railways, and to the coal dealers, the total reached almost \$40,000,000. A memorable strike of the Amalgamated Society of Engineers was brought to an end in September, after more than seven months' duration. The strikers included the workers engaged in various branches of the engineering and shipbuilding industries in Northumberland, Durham, and the North Riding. They struck to prevent a reduction in wages, but the condition of trade made success doubtful from the beginning. In February Mr. Lloyd-George had attempted to adjust matters, but his award was rejected by the workmen. They finally accepted more disadvantageous

terms, wages being reduced one shilling per week. The strikers received strike pay from union funds throughout the struggle. The long contest was carried on with much reckless obstinacy by the men, and was ended by the small majority of only 870 in a total of 8,348 votes.

FRANCE. France was the scene of several serious labor disturbances during the year. These seem to have been due only partly to a demand for better conditions of labor, being prompted largely by political agitators. In April occurred a lockout in the building trades. The men demanded a nine-hour day and increased pay. Because of lack of unanimity among the members of the employers' federation, the lockout affected only about 12 per cent. of the 200,000 employees. For this reason it failed, lasting from April 6 to 17. On June 2 occurred a serious conflict between strikers at Vigneux, a suburb of Paris, and soldiers, in which two of the former were killed and a number of strikers and soldiers wounded. The funeral of one of the slain strikers at Villeneuve-Saint-Georges was attended by fully 10,000 workmen from Paris, who engaged in many riotous manifestations. This was followed by a meeting of protest against the police, at which most incendiary language was used. On July 30 Paris workmen declared a one-day strike in the building trades in sympathy with strikers at Draveil. At the same time the General Confederation of Labor ordered strikes among the compositors, bakers, and cab-drivers. At Villeneuve-Saint-Georges streets were barricaded and the red flag displayed. After twenty futile summonses to disperse, the troops opened fire, killing four and wounding fifteen; of the soldiers 69 were wounded. The attempt was made to identify the strike with the socialistic propaganda, but with little success. The strike was in fact greatly weakened by the disavowal of the socialists of all participation in it. It collapsed when the executive officers of the Confederation were arrested. The Confederation at once elected new officers, who attempted to organize government employees, both civil and military, preparatory to a general strike that should paralyze all governmental activities. A twenty-four hours' general strike in fact was ordered for August 3, but only a few thousand out of the expected 100,000 responded; the unions repudiated the incitements of the Confederation. The premier did not believe the movement a protest against any industrial or social grievance, but "simply political treason against the State." See FRANCE.

DENMARK. During the third week in August no newspapers, except those of the Socialists, were published in Denmark, on account of a strike of compositors. This strike was undertaken in sympathy with several others in progress at that time, all of which were brought to an end by the successful mediation of M. Berg, the Minister of the Interior.

STROBEL, EDWARD HENRY. An American diplomatist, died at Bangkok, Siam, on January 15, 1908. He was born in Charleston, S. C., on December 7, 1855, graduated at Harvard in 1877, and in law there in 1882, and was admitted to the New York bar in 1883. He practised in New York in 1883-85; was secretary of the United States legation at Madrid in 1885-90; was third assistant secretary of state in 1883-1893, and envoy extraordinary and minister plenipotentiary to Ecuador from April to December, 1894, when he was transferred to Chile,

where he served till 1897. In the latter year he was appointed to arbitrate the Fréaut claim of France against Chile, and in 1899 he was counsel for Chile before the United States and Chilean Claims Commission in Washington. He was Bemis professor of international law at Harvard in 1898-1906, but after 1903 acted—under leave of absence—as general adviser to the Government of Siam. In 1903 he was appointed a member of The Hague Permanent Court of Arbitration. He published *The Spanish Revolution* (1898).

SUBMARINE BOATS. During the summer of 1908 the submarine flotilla of the Italian Navy participated in manœuvres, and the results were considered remarkably successful. These four ships, of 220 tons submerged displacement, made, without assistance, a run of nearly 1,300 nautical miles, from Venice on the Adriatic to Spezzia on the Mediterranean, where they participated in the August manœuvres of the combined fleet. In these manœuvres the *Glauco* was successful in hitting with the torpedoes the battleship *San Bon* twice, despite the extraordinary vigilance on the part of the patrol boats and extra watches maintained on the battleship. Italian submarines have been constructed during the last four years after a series of experiments with the *Delfino*, an old submarine, for many years used by the Italian Navy. In Great Britain submarine of 400 tons displacement, submerged, were able to make 600 knots with the gasoline supply carried by them, and the submarine fleet of the French Navy, which at the close of the year numbered about 100 vessels, showed records of nearly 700 miles. In the United States, Congress in 1908 authorized the construction of eight more submarine torpedo boats, in addition to twenty which had been already constructed for the navy. The technical value of the submarine is now well recognized, and certain authorities believe that it may displace the destroyer as a means of offense for the discharge of torpedoes. The submersible vessels in use during 1908 were able to dive in six minutes after running along the surface in cruising trim, and were said to have a submerged speed of 9 knots an hour, while their speed at the surface was about 15 knots. With the submarine torpedo boat must be considered the increased range of the torpedo itself (see **TORPEDO**), and in all manœuvres greater attention was being paid to practice with submarines and to attempts to ascertain their presence in the vicinity of battleships.

SUBWAYS. See **TUNNELS**.

SUCHER, JOSEF. An Austrian composer and conductor, died on April 4, 1908. He was born at Dobör, in Eisenburg, Hungary, on November 23, 1843. After receiving some preliminary musical instruction as a chorister in the Imperial Chapel, Vienna, he entered the University of Vienna as a law student, at the same time studying composition under Sechter. Subsequently he became leader of the Vienna Choral Society, and was appointed assistant conductor at the opera house. In 1876 he became conductor at the Stadt Theatre in Leipzig. Here he attracted widespread attention through his brilliant conducting of the rehearsals of Wagner's "Ring" cycle of music dramas. He conducted at the Hamburg Opera House from 1879 to 1888. In the latter year he was appointed conductor at the Imperial Opera House in Berlin. His

compositions include songs, anthems, and numerous choral and orchestral pieces.

SUDAN. The Anglo-Egyptian Sudan extends from Egypt southwards to Uganda and the Congo Free State, a distance of about 1,200 miles, and from the Red Sea to Wadai, in the French Congo. Area, about 950,000 square miles; population, about 2,000,000, including over 3,100 Europeans, and 10,000 Abyssinians, Egyptians, and East Indians. Khartoum, the capital, has 14,823 inhabitants (including suburbs, 75,504); Omdurman, 41,592. There is now a continuous line of cultivation on both slopes of the Blue Nile from Khartoum for a distance of several hundred miles, up to where the dense forests commence. The villages are numerous and prosperous looking. But the Blue Nile is not navigable for half the year, and a railway to Khartoum is needed to open a market for the agricultural produce of the region. The country between the Blue and White Nile has a rich soil, which would yield large wheat crops with artificial irrigation, but it is in an unhealthy condition. The total area under cultivation in 1907 was 1,423,971 acres, an increase of 415,329 acres over 1906. The Sudan Irrigation Service, in addition to its work on the various projects for increasing the water supply of Egypt, is planning the canalization of the Gezira, which will bring under cultivation large tracts of fertile soil, Durra, millet, sesame, pulse, wheat, and cotton are cultivated. The cotton production in 1906 amounted to 9,669,881 pounds. A cotton ginning plant has been erected at Zaidab, in the province of Berber. Vast forests, rich in fibres and tanning material, extend along the rivers. The province of Kordofan contains the finest gum forests; Bahr el Ghazal, the best rubber forests. The principal item of export in 1907 was gum, amounting to 20,393,620 pounds. The export of ivory in 1906 was 52,741 kilos, valued at nearly \$170,000. With the exception of certain small districts, the government exercises an ivory monopoly.

The total imports and exports in 1907 were valued at £1,214,859 and £357,729 respectively. Besides the military railway along the Nile to Khartoum, 1,047 miles long, there are the Nile-Red Sea railway, 311 miles long, running from Port Sudan and Suakim, on the Red Sea, to the mouth of the Atbara, about 20 miles south of Berber, and the Karima-Abu Hamed line, 138 miles long, which taps the Dongola province, joining the military railway at Abu Hamed. The Nile-Red Sea line has given rise to the new city of Port Sudan, which has displaced the old port of Suakim, 30 miles to the south, as the main Red Sea outlet of Sudan traffic. Port Sudan has substantial public buildings, a hospital, schoolhouse, public park, etc. Its streets are lighted by electricity, which also propels its street cars. Trains are running regularly to Khartoum. Over the Blue Nile a steel bridge 1,700 feet long is now being thrown for a railway from Khartoum almost to the Abyssinian border. The principal cities are in telegraphic communication with each other and with Cairo.

The administration is by a governor-general, who exercises supreme power, civil and military, and is appointed by the Khedive with the governor-general was Lieut.-Gen. Sir Reginald consent of the British government. In 1908 the

Wingate, Sirdar of the Egyptian army. The country is divided into 13 provinces, each under a governor who is a British officer in the Egyptian army. The province of Kordofan was to be divided into two provinces at the beginning of 1908. Darfur is under the rule of a native Sultan. The civil and criminal codes are based on those of India. A judicial commissioner sits at Khartoum, to whom an appeal lies from the provincial tribunals. The revenue and expenditure for 1908 were estimated at £1,000,201 and £1,379,964 (1£E=\$4.943). The regular annual deficit is covered by Egypt.

Tribes in South Kordofan having shown hostility to the government and refused to pay tribute, a small British force was sent against them in the autumn. The British stormed a hill and captured some of their chiefs, suffering slight loss themselves, but killing some sixty of the natives.

SUEZ CANAL. An artificial waterway connecting the Mediterranean and Red Seas, 87 miles in length. In 1907 it was passed by 4,267 vessels, of 14,728,434 net tons, against 3,075 vessels, of 13,445,504 net tons, in 1906. British ships numbered 2,651, of 9,495,868 net tons, or 64.5 per cent of the total tonnage, against 61.7 per cent in 1906. German ships numbered 580, of 2,253,651 tons, a gain of 98,099 tons over 1906. French ships numbered 239, of 806,786 tons, a loss of 49,525 tons from 1906. The tonnage of other nations in 1907 was: Netherlands, 632,089; Austria-Hungary, 439,997; Japan, 259,059, a gain of 111,780 over 1906; Russia, 239,350; Italy, 202,112; Denmark, 105,130; etc. The United States was represented by 9 vessels of 13,537 tons, against 22 vessels of 67,876 tons in 1906. The number of passengers was 243,580, of whom 84,033 were military (40,777 British, 18,680 Turkish, 16,688 French, and 5,593 German). The receipts in 1907 were £4,640,000, against £4,273,000 in 1906.

SUGAR. Mainly on account of prolonged dry weather during the summer of 1908 in nearly all sections of the sugar beet growing region of the United States, the yield of beets and the production of sugar fell below the figures given in early estimates. According to an estimate published in the *American Sugar Industry and Beet Sugar Gazette*, 3,658,621 short tons of beets were worked by the beet sugar factories during the campaign of 1908-09 as compared with 3,767,871 short tons the previous year, while the production of beet sugar for the two seasons was given as 421,244 and 463,628 short tons respectively. The Secretary of Agriculture, however, in his report issued Dec. 14, 1908, placed 1908 at the top in the production of sugar beets for sugar and in the value of the crop to the farmer. He stated that while the figures were not much above those for 1906 and 1907 the tonnage of beets for 1908 was higher by 44.7 per cent. and the value, \$21,500,000, by 43.7 per cent., than the corresponding average figures for the preceding five years. The beet sugar production from this crop was estimated at about 500,000 short tons, worth at the factory, with the pulp, about \$45,000,000 or more than in any preceding year. As compared with a full crop, the Department of Agriculture rates the crop of 1908 at 87.7 per cent., that of 1907 at 89.5 per cent., and that of 1906 at 93.8 per cent. During the campaign of 1908 63 out of 68 factories were in operation and one factory, located at Corcoran, Cal., was

built during this year. Absolute figures on beet sugar production are not available at the end of the calendar year, because the factories had not all finished their runs.

The report mentioned above placed the plantation value of sugar cane, molasses, and sirup in the United States for 1908 at about \$34,000,000, a value exceeded only in 1904 and greater by 9.7 per cent. than the average value for the preceding five years. The production of raw sugar from cane in 1908 was commercially estimated at 407,000 short tons. The total value of the sugar beet and the sugar cane to the grower was placed at \$56,000,000. The combined production of beet and cane sugar is estimated at about 900,000 short tons, and the factory value of the two kinds of sugar was supposed to be \$75,000,000, holding the record place. The grand total value for the year of all sugar products and sugar factory by-products, based mostly on commercial estimates, is given at \$94,000,000. Statements prepared by the Bureau of Statistics of the Department of Commerce and Labor show that the sugar consumption in the United States for 1907 amounted to 7,089,667,975 pounds, or 82 3-5 pounds for every man, woman, and child in the country. At an average retail price of 5¼ cents a pound this means an expenditure of 372 million dollars, or more than one million dollars per day for sugar. The statement further showed that 21.3 per cent. of the sugar consumed in 1907 was of home production, 17.7 per cent. from our island possessions, and 61 per cent. was imported from foreign countries. Of 4,366,700,000 pounds received from foreign countries, 3,236,500,000 pounds came from Cuba. The world's sugar production for 1907 was 32,179,700,000 pounds. According to Willett and Gray the consumption of refined sugar in the United States in 1908 was 3,022,153 tons, of which the American Sugar Refining Company manufactured 1,364,286 tons, or 45.14 per cent., as against 1,147,712 tons, or 37.98 per cent, manufactured by the independent refiners. The average percentage of sugar extracted from beets during the period 1904-8 was 13.74 per cent. for Austria, 11.86 per cent. for France, and 13.39 per cent. for Germany. Claus Spreckels, the well-known sugar manufacturer, died at San Francisco Dec. 26, 1908.

SUMATRA. An island of the Malay Archipelago, forming a part of the Dutch East Indies (q. v.). Area, 184,768 square miles. Population in 1905, 4,029,505. There are large deposits of coal and tin. The petroleum production has become important, the greater part of the output from the Dutch East Indies coming from Sumatra. The output of coal in 1907 was 288,969 pounds. In 1908 the sale of Sumatra tobacco at Amsterdam and Rotterdam was 252,665 bales, at an average price of 36½ cents per half kilo (1.1 pound). The 1908 crop of Sumatra tobacco was estimated at 274,764 bales. The "culture system," under which the natives had to render forced labor on government coffee plantations, prevailed in the West Coast province until March 1, 1908. The production of coffee on government account in 1907 was 2,439,004 pounds, and on private account, 13,710,432 pounds, against 2,598,008 and 11,142,072 respectively in 1906. Under the "culture system" the natives paid no taxes to the government, but were compelled to render labor on government coffee plantations, and to sell to

the government the coffee which they cultivated on their own account at the low price of 15 florins (\$6.03) per picul of 136 pounds. This system has been abolished since March 1, 1908. The natives of the West Coast province are left free to cultivate and sell coffee on their own account, the government levying instead an income tax of 2 per cent. In order, however, to prevent traders from combining to force down the price of coffee, the government will continue to buy at a special price coffee from the natives whenever they choose to sell to it. Sumatra is one of the outposts of the Dutch East Indies, and is partly governed directly by residents, partly by assistant-residents, controllers, etc., the whole island being under a governor, who is subordinate to the governor-general of the Dutch East Indies. For its various administrative divisions see DUTCH EAST INDIES.

SUN. See ASTRONOMY.

SUNDAY SCHOOL UNION, AMERICAN. A religious organization, founded as the Philadelphia Sunday Adult School Union in 1817, and as the American Sunday School Union in 1824. Its object is to establish Sunday schools in the United States wherever needed and to provide them with suitable literature. During the 84 years of its existence, the union has organized 117,558 Sunday schools, having 642,641 teachers and 4,648,954 pupils. In the first eight years of the new century, 1901-1908, 77,732 conversions were reported in the Sunday schools of the union; 856 churches of different denominations followed from these; 169,724 copies of the Scriptures were provided, chiefly for the destitute; and an average of 265 missionaries were employed each year. The union has missionaries in every State in the Union. It is supported entirely by voluntary contributions. The headquarters are at 1816 Chestnut street, Philadelphia. The union lost its president, Morris K. Jesup, by death during the year. The secretary of missions is J. M. Andrews.

SUN SPOTS. See ASTRONOMY.

SURINAM. See DUTCH GUIANA.

SVEN HEDIN. See EXPLORATION.

SWARTHMORE COLLEGE. An institution of higher learning at Swarthmore, Pa., founded in 1869. In the autumn of 1908 the attendance was 307. In 1908 a new library building and a new engineering shop building was opened for the use of students. The foundation was laid for a new section of Wharton Hall, a young men's dormitory. A contract has been made for the largest telescope and one of the best astronomical equipments on the Atlantic Coast. The present endowment of the college is about \$1,000,000, and the faculty numbers 36. The president is Joseph Swain.

SWAZILAND. A British protectorate in South Africa, formerly attached to the Transvaal, since 1906 under the immediate jurisdiction of the High Commissioner for South Africa. Area, 6,536 square miles; population (1907), 90,890. In 1904 there were 890 whites. Most of the monopolistic concessions granted by the native chiefs have been expropriated. The native chiefs retain jurisdiction in civil disputes between natives, with an appeal to magistrates' courts. Alluvial tin is mined. The natives cultivate maize, millet, ground-nuts,

beans, sweet potatoes, etc., for their own needs. Attempts are being made to introduce cotton culture. The protectorate is included in the South African Customs Union (see **BRITISH SOUTH AFRICA**). The resident commissioner in 1908 was R. T. Coryndon.

SWEDEN. A kingdom of the Scandinavian peninsula. Area, 172,876 square miles. Population in 1900, 5,136,441; estimated Dec. 31, 1907, 5,377,713, of whom 1,306,469 were in the cities. In 1906 there were 32,444 marriages, 136,722 births (exclusive of still-births), and 76,372 deaths, giving an excess of births over deaths of 60,350. The rate per 1,000 of population was: Marriages, 6.1; births, 25.7; deaths, 14.4; natural increase, 11.3. In 1906 the number of immigrants was 9,581, and of emigrants 24,704; in 1907 the emigration was 22,893. The population of the principal cities at the end of 1907 was as follows: Stockholm, the capital, 337,460; Göteborg, 160,523; Malmö, 79,817; Norrköping, 45,203; Hälsingborg, 32,238; Gäfle, 31,367; Örebro, 28,078; Eskilstuna, 27,444; Karlskrona, 26,293; Upsala, 24,635; Jönköping, 24,174.

FORESTRY AND AGRICULTURE. The yearly gross capacity of the forest production is estimated at 34,530,000 cubic metres. But not all of this can be made useful, and it is supposed that over 5,000,000 cubic metres rot away in the forests, whereby the effective production is reduced to 29,336,000 cubic metres yearly. According to investigations about the uses of raw materials, there is consumed very near 31,000,000 cubic metres annually, partly within the country and partly for export. Thus the annual consumption exceeds the effective production by over 1,600,000 cubic metres, a deficit that might be more than avoided, if the large quantities that rot away in the forests could be utilized. The larger forest owners generally take good care of their properties by employing persons specially educated in forestry, while the contrary in most instances is the case with the smaller forest owners; for this reason it is proposed that through the laws there should be taken measures for the preservation of the forests, and that the government should buy forest grounds to a larger extent than heretofore. Over one-half the value of the exports consists of forest products—wrought and unwrought timber, pulp, and paper. The number of farms in 1905 was 352,897, of which 88,827 were of two hectares (1 hectare=2.47 acres) and under; 223,186 contained 2 to 20 hectares; 33,552 were of 20 to 100 hectares; and 3,257 contained over 100 hectares. The wheat crop in 1907 was 5,953,000 bushels; rye, 21,570,000; barley, 13,550,000; oats, 67,741,000; maslin (mixed barley and oats), 12,770,000; potatoes, 52,270,000. The production of sugar beets in 1907-8 was 756,000 metric tons; in 1908-9, 920,000. At the end of 1905 there were in Sweden 554,999 horses, 2,549,928 cattle, 1,074,386 sheep, and 829,888 pigs.

MINING AND METALS. In 1906 there were 31,876 persons engaged in mining. The ore production of 1906 was, in tons: Iron, 596,400; silver and silver lead, 1,938; copper, 19,655; zinc, 52,552; manganese, 2,680; sulphur pyrites, 21,827. The coal raised in 1906 was 296,980 tons. The production of pig iron in 1907 was 603,400 tons, against 596,400 in 1906. Other metals produced in 1906 were: Gold, 20.32 kilos; silver, 938 kilos; lead, 753 tons; copper, 1,209 tons; zinc, 175 tons; steel, 391,352 tons.

MANUFACTURES. The most important manufacturing industries are the sawing and planing mills, of which there were 1,281 in 1905, employing 38,568 workers and turning out a product valued at 135,570,000 crowns (1 crown=26.8 cents); iron and steel mills, with 20,700 workers and 63,032,000 crowns' worth of product; machinery works, with 23,316 workers and 65,711,000 crowns' worth of product. Other important industries are: Furniture, wood-pulp, paper, sugar, and cotton and wool spinning and weaving. The margarine production now exceeds the home consumption; the exports were 1,400,000 pounds in 1906, and 2,500,000 pounds in 1907. The beet sugar production was 111,000 tons in 1907-8, and 133,900 tons in 1908-9. The sugar manufacturers of southern Sweden formed in 1907 a company, or trust, capitalized at \$38,100,000, the actual value of the factories being estimated at \$16,000,000. There was also organized in 1907 the Association of Swedish Distillers, representing 10,038,000 gallons of the total yearly production of 10,566,000 gallons of whiskey. The trust formed in 1906 by 18 match-manufacturing companies for the sale of matches has been quite successful, and has overcome the Japanese match competition in India. In 1908 it was negotiating for a combination with a Japanese company, in order to obtain a supply of matchwood, which is growing scarce in Sweden and Russia. During the year ending Aug. 31, 1908, the cotton spinning establishments employed 390,000 spindles, over 228,000 running short time, and the total consumption of cotton was 88,857 bales (77,368 American and 11,224 East Indian). The cellulose production of 1908 was estimated at 450,000 tons sulphite and 108,000 sulphate, against 383,000 and 78,000 tons, respectively, in 1907. The annual value of the manufacture of machines and implements for dairy work is about \$3,000,000, seven-eighths being for export. The largest establishment devoted to this industry in Stockholm employs over 1,200 skilled workmen. The annual export of scientific instruments of precision is valued at over \$800,000.

COMMERCE AND COMMUNICATIONS. In 1906 the imports and exports amounted to 644,228,000 and 504,285,000 crowns (1 crown=26.8 cents) respectively, against 582,084,000 and 450,212,000 crowns in 1905. The principal imports in 1906 were, in crowns: Coal, 55,483,000; cereals, 42,538,000; coffee, 29,157,000; machinery, 27,067,000; iron manufactures, 23,811,000; hides and skins, 22,666,000; cotton, 19,891,000; wool, 17,915,000; copper, 17,078,000; fish, 16,399,000; petroleum, 16,354,000; oil cakes, 16,221,000. The principal exports in 1906 were: Timber, 169,447,000; iron, 80,383,000; wood-pulp, 45,206,000; butter, 31,912,000; paper, 27,235,000; machinery, 20,563,000; iron manufactures, 19,546,000; furniture, etc., 11,795,000; matches, 10,017,000. The trade with the principal countries of origin and destination in 1906 was as follows, in crowns:

From and to	Imports	Exports
Norway	25,124,000	35,401,000
Russia and Finland.....	32,782,000	17,806,000
Denmark	42,368,000	55,042,000
Germany	234,021,000	96,597,000
Netherlands	15,129,000	26,328,000
Belgium	10,277,000	13,706,000
Great Britain.....	160,723,000	170,960,000
France	20,429,000	37,050,000
United States.....	60,009,000	11,658,000

On Jan. 1, 1907, the merchant marine consisted of 1,090 steamers, of 488,362 tons, and 1,852 sailing vessels, of 253,999 tons. The length of railway at the end of 1907 was 8,218 miles, of which the State owned 2,693 miles; of State telegraph lines in 1906, 6,043 miles; and of railway telegraph lines, 5,115 miles.

FINANCE. The budget for 1909 balanced at 216,932,000 crowns. The principal estimates of revenue were: Customs, 58,000,000; post office, 21,000,000; telegraphs, 11,500,000; railways (net), 9,500,000; forests, 8,500,000; income tax, 26,000; excise, 44,900,000. The principal estimates of expenditure were: Army, 58,325,500; navy, 25,964,900; post office, 19,520,000; telegraphs, 11,115,740; worship and education, 24,722,100; reserve for workers' invalid and accident insurance, 1,900,000. The public debt stood on Jan. 1, 1908, at 464,359,844 crowns, contracted almost exclusively for railway construction.

ARMY. The army is a modified militia, resembling that of the Netherlands. Military service, under the new regime inaugurated in 1907, is partly by voluntary enlistment and partly by conscription. The voluntarily enlisted men form a strong nucleus or skeleton army which is filled up by conscriptions, to which all citizens between 21 and 42 years of age are liable, with the usual exceptions. Service is for 8 years in the first ban, 4 in the second, and 8 in the third, or Landstorm. The initial training periods are 150 days for dismounted and 281 days for mounted troops; dismounted men are subsequently called up 3 times for 30 days each time, in the remaining 7 years of active service, and mounted men twice, for 42 days each time. There are 28 regiments of infantry; 10 of cavalry; 6 of field, and 1 of garrison artillery; 12 howitzer, 7 heavy and 3 horse artillery batteries; 4 battalions of engineers and auxiliary troops. The field army has a strength of 100,000 combatants, and the reserve troops of the second line have an equal strength. The peace strength is about 62,000, and the nominal war strength is about 350,000 of all grades.

NAVY. At the beginning of 1908 the effective navy consisted of 18 armored coast defense vessels, aggregating 50,300 tons; 1 armored cruiser, 4,060 tons; 7 armored gunboats, 3,220 tons; 4 gunboats, 1,816 tons; 8 destroyers, 5,360 tons; 27 torpedo boats, 1,930 tons; total, 65 ships, of 66,686 tons, besides 1 submarine. During 1907 there was an increase of 14,406 tons. The crews numbered 4,682 officers and men.

GOVERNMENT. King Gustaf V., born June 16, 1858, succeeded on the death of his father, Oscar II., Dec. 8, 1907. The cabinet at the end of 1908 was as follows: Minister of State, Solomon Arvid Achates Lindman; foreign affairs, Eric Birger Trolle; justice, Gustaf Albert Petersson; agriculture, Alfred Petersson; church and education, Ake Hugo Hammar skjöld; finance, Carl Johan Gustaf Swartz; interior, Count H. E. G. Hamilton; marine, Capt. Count Carl August Ehrensward; war, Maj.-Gen. O. B. Malm; counsellors of State (without portfolio), C. F. W. Hedestierne and G. W. A. Boos.

HISTORY. On Jan. 1, 1908, King Gustavus V. opened the Riksdag. The speech from the throne laid special stress on proposed legislation for the reorganization of the army and navy with a view to increasing the defensive power of the nation, the adjustment of taxation, and the

working out of schemes for workers' insurance and old age pensions. No legislation, it was stated, would be proposed on the subject of female suffrage until the electoral reform received the confirmation of a new legislature after a general election.

In March an agreement was made with Germany for the establishment of direct railway transport between the two countries by a service of powerful ferries between Trelleborg, in Sweden, and Sassnitz, in Pomerania. On April 23 two important international agreements were signed with Sweden's participation. In St. Petersburg representatives of Russia, Germany, Denmark, and Sweden signed a convention guaranteeing the maintenance of the territorial *status quo* in the Baltic. A parallel agreement regarding the North Sea was signed at Berlin by the representatives of Germany, Great Britain, France, the Netherlands, Denmark, and Sweden. In each convention the signatory powers agreed that, in the event of the territorial *status quo* being threatened, they would communicate with a view to joint action for its maintenance. A memorandum was attached to each convention to the effect that the agreement cannot be appealed to when the free exercise of sovereign rights in their possessions by the signatory powers is concerned. During the same week Great Britain, France, and Sweden agreed to the annulling of the prohibition to fortify the Aland Islands, in the Gulf of Finland, laid upon Russia by the Treaty of Paris of 1856. The conclusion of the Baltic Sea convention removed all causes of tension between Russia and Sweden, and in May, Prince William, second son of King Gustavus, married the Russian Grand Duchess Marie. Foreshadowing these conventions, the Swedish foreign minister declared in the second chamber of the Riksdag in February that Sweden did not desire a guaranteed neutrality, but would defend her independence in case of war. The government had not asked for a guaranty, but did not wish to reject projects that had been brought forward for the maintenance of the *status quo* in the Baltic.

On April 26 the English king and queen visited King Gustavus in Stockholm. Later in the year the visit was returned by the Swedish king and queen, who arrived at Windsor on Nov. 18. Early in June both chambers of the Riksdag adopted a proposal, submitting to arbitration the delimitation of the sea boundary between Norway and Sweden. Other important measures passed by the Riksdag, which closed early in June, were for the increase of the sugar tax, the purchase of the Svapavara mines by the State, the electrification of the State railways, and the establishment of a special administration for the waterfalls.

At the end of June there was a dock laborers' strike at Gothenburg, Malmö, and other towns. The arrival of British strike breakers led to conflicts between the mob and the police.

SWIMMING. The Olympic games brought into competition several of the best swimmers in the world. England scored the largest number of points in the swimming events, being especially strong in the distances. The United States, with C. M. Daniels, of the New York A. C., competing, excelled in the sprints. The principal contests were: 100 metres, won by C. M. Daniels in 1 m. 53-5s.; 200 metres (breast stroke), won by Holman, England, in 3m. 9 1-5s.;

400 metres, won by Taylor, England, in 5m. 36 1-5s.; 1,500 metres, won by Taylor, England, in 22m. 8 2-5s.; 100 meters (back stroke), won by Bieberstein, Germany, in 1m. 24 3-5s.; 200 metres (team competition), won by England in 2m. 55 1-5s.; high diving, won by Johansson, Sweden; fancy diving, won by Zurner, Germany.

In the United States, the national championships, conducted by the Amateur Athletic Union, were held at Chicago, Pittsburg, and New York during March. Some of the more important senior events, winners and time, were: 50 yards, M. Schwartz, Missouri A. C., 27 2-5s.; 150 yards (back stroke), A. M. Goessling, Missouri A. C., 2m. 1-5s.; 200 yards (breast stroke), A. M. Goessling, 2m. 46 2-5s.; 220 yards, C. M. Daniels, New York A. C., 2m. 36 4-5s.; 500 yards, L. B. Goodwin, New York A. C., 7m. 25s.; 1,000 yards, L. B. Goodwin, 14m. 13 3-5s.; 440 yard relay, New York A. C., 4m. 13 3-5s. (record time); plunge, C. L. Brown, Illinois A. C., 74 feet; fancy diving, G. Gaedzik, Chicago A. A. The open water championships were held at Travers Island in September. C. M. Daniels won the 440 yards in 5m. 54s. Other events were: 880 yards, L. B. Goodwin, 13m. 23s.; one mile (Sheepshead Bay), C. M. Daniels, 27m. 20 3-5s.; five miles (New Rochelle), L. B. Goodwin, 2h. 10m. 25s. In water polo the New York A. C. team defeated the Bath Beach S. C. 12-0 and tied the Chicago A. A. 1-1. Upon the refusal of the Chicago team to play an extra period, the tie game was awarded to the New York A. C.

The Intercollegiate Swimming League Championship was won by Pennsylvania, with 5 victories and 1 defeat. Princeton was second, with 4 games won and 2 lost. The standing of the other teams was: Harvard, won 3 and lost 2; Yale, won 3 and lost 2; Columbia, won 1 and lost 4; C. C. N. Y., won 0 and lost 5. Yale won the water polo championship, winning 5 games and losing 1. Pennsylvania won 4 and lost 2; Columbia won 3 and lost 2; Princeton won 2 and lost 3; C. C. N. Y. and Harvard each won 1 and lost 4. An extra meet was made necessary because of the tie of Pennsylvania and Princeton in the swimming matches and of Yale and Pennsylvania in water polo. New college records made in 1908 were: 50 yards, Dennison, of Princeton, 26 2-5s.; 100 yards, P. Withington, of Harvard, 1m. 2 2-5s.; 800 feet relay, Pennsylvania, 2m. 40 4-5s.; plunge for distance, Beatty, of Yale, 72 feet.

SWINE. See STOCK RAISING.

SWITZERLAND. A republic of Central Europe. Area, 15,975 square miles. Population in 1900, 3,325,023; estimated in 1907, 3,525,256. In 1907 there were 27,660 marriages, 97,692 births (exclusive of 3,185 still-births), 62,445 deaths, and 5,710 emigrants. The population of the principal cities in 1908 was: Bern, the capital of the Confederation, 74,651; Zürich, 186,909; Basel, 129,470; Geneva, 118,256; Lausanne, 55,741; St. Gallen, 54,127; Chaux-de-Fonds, 42,188; Lucerne, 35,433; Bienne, 27,881; Winterthur, 27,031; Neuchâtel, 23,395; Fribourg, 19,844.

PRODUCTION. In 1905 there were 564,022 enterprises, of which 250,066 were in agriculture, 242,543 in arts, industries, and commerce, and 71,413 in domestic industries. In 1907 the wheat production was about 4,000,000 bushels—the average for several years past. Switzerland depends upon foreign imports of cereals. The

importation of wheat in 1907 was 468,405 metric tons, of which 233,577 was from Russia, 125,671 from Rumania, 44,475 from Argentina, 15,895 from Austria-Hungary, 14,084 from the United States, and 13,359 from Canada. The importation of wheat flour was 38,855 metric tons—mainly from Germany and France. The wine production in 1907 was 23,760,000 gallons. The old vineyards have been attacked by phylloxera, in fighting which the Federal government has already spent some 2,500,000 francs. It has now been decided to replace the old vines with the more robust American vines. To aid the planters in reconstituting their vineyards, the government has voted an annual appropriation of 500,000 francs, to extend over a period of 60 years. The production of sugar beets in 1907-8 was 27,230 metric tons; for 1908-9 it was estimated at 30,000 tons. The production of beet sugar in 1907-8 was 3,568 tons; for 1908-9 it was estimated at 3,500 tons. The Federal government exercises control and a virtual monopoly over the manufacture and sale of spirituous liquors. The consumption of alcoholic liquors and denatured alcohol in 1907 was 4,224,428 gallons, of which 1,735,081 gallons was for drinking, and 2,489,347 gallons for technical and household purposes. Of the total consumption, only 956,458 gallons were of home production. The manufacture, importation, and sale of absinthe was prohibited on July 5, 1908, by a popular vote of 236,582 against 135,888. The French cantons, where absinthe is consumed, rejected the proposal by a small majority, but the vote in the German cantons, where absinthe is but little used, turned the tide in its favor. See *History*.

Another constitutional amendment adopted on July 5, 1908, empowers the Federal government to enact regulations concerning trades and handicrafts. This will lead to a unification of the laws affecting the relations of capital and labor, the settlement of trade disputes, the ordinances regarding apprenticeship, factory regulations, etc. In 1907 there were in Switzerland—exclusive of the domestic industries—7,278 manufacturing establishments, employing 307,128 workers, against 6,080 factories and 242,534 workers in 1901. There was thus an increase of 19 per cent. in the number of manufacturing establishments and 26.6 per cent. in the number of workers. The cotton industry employed during the year ending Aug. 31, 1908, 1,493,012 spinning spindles, and consumed 343,045 bales of cotton (245,976 American, 50,838 East Indian, and 19,665 Egyptian). The number of twister spindles was 57,296 on Jan. 1, 1907; of looms, 18,842. During 1907 there was a large increase in looms, and the estimate in 1908 was near 25,000. Most of the mills are small, the average number of spinning spindles in a mill being 22,000. There are four yarn mills containing 50,000 spindles each, the largest one being at Zürich, with 180,000 spindles. The watch-making industry employed, in 1907, 115,617 persons (55,988 male and 59,629 female), of whom 52,752 were watchmakers (33,378 men and 17,734 women). Of the total number employed in the watchmaking industry, 42.4 per cent. were in the canton of Bern, 34.2 per cent. in Neuchâtel, 7.5 per cent. in Solothurn, 6 per cent. in Vaud, and 4.2 per cent. in Geneva. In recent years the productive capacity of the watchmaking establishments was increased by a third. The number of watch cases stamped

in 1907 was 3,795,629 (657,502 gold and 3,138,127 silver cases), against 4,226,696 in 1906 (818,565 gold and 3,408,131 silver). The depression in the trade was even more marked in the first four months of 1908, when the number of cases was 897,923, against 1,337,826 during the first four months of 1907. In some cases the cantonal government lent assistance to the local industries, in order to give employment to the people in the factories.

The lack of coal deposits in the country is largely compensated for by the abundance of water-power, of which 750,000 horsepower is capable of utilization, and about 250,000 is actually utilized. In 1901 water-power was used by 2,058 factories, with 185,486 h.p., against 1,471 factories using steam-power, with 84,030 h.p., and 1,213 factories using electricity, with 37,413 h.p. Water-power is largely used by electrical works. In 1906 a resolution by the National Council was adopted, providing that for the next three years the transmission into foreign countries of electric energy generated by domestic water-power must be dependent upon a permit granted by the Federal Council. In the meantime the agitation in favor of a constitutional amendment, granting to the Federal government complete control over the water-power of the country, was continued. This amendment was submitted to the people on Oct. 25, 1908.

COMMERCE AND COMMUNICATIONS. The special imports and exports in 1907 amounted to 1,736,172,491 and 1,188,980,117 francs respectively, against 1,554,194,432 and 1,103,359,461 francs in 1906. Included in the totals for 1907 were 48,745,803 and 36,041,858 francs, respectively, of coin and precious metals. The principal imports for domestic consumption in 1907 were: Animals, 55,613,000 francs; coal, coke, and briquettes, 93,074,000; raw cotton, 50,518,000; cotton yarn, 20,322,000; cotton fabrics, 61,816,000; manufactures of flax, hemp, jute, etc., 21,206,000; cereals and flour, 175,100,000; wrought iron and steel and their manufactures, 93,661,000; pig iron, 12,075,000; leather and its manufactures, 35,066,000; machinery and locomotives, 42,202,000; thrown and spun silk, 200,684,000; chemicals, 33,564,000; sugar, raw and refined, 30,283,000; wearing apparel, 49,668,000; raw wool, 21,832,000; wool yarn, 10,045,000; woolen manufactures, 42,176,000. The principal exports of domestic produce and manufacture in 1907 were: Cheese, 54,183,000 francs; condensed milk, 31,445,000; chocolate, 31,278,000; cotton piece goods, 39,230,000; cotton ribbons, embroidery, and lace, 184,754,000; cotton yarn, 16,804,000; machinery and locomotives, 73,582,000; thrown and spun silk, 121,470,000; silk manufactures, 170,573,000; watches and clocks, and parts of, 149,268,000. The special trade with the leading countries of origin and destination in 1907 was as follows, in francs:

From and to	Imports	Exports
Germany	551,326,000	281,868,000
France	297,768,000	121,278,000
Italy	230,288,000	83,152,000
Austria-Hungary	102,995,000	65,826,000
Great Britain	117,920,000	188,524,000
Belgium	33,941,000	20,342,000
Roumania	36,347,000	6,516,000
Russia	70,674,000	33,404,000
United States	70,144,000	159,561,000
All other America	54,374,000	67,166,000
Asia	46,210,000	43,279,000
Africa	81,075,000	13,663,000
Australia and Polynesia	10,849,000	6,167,000

On Jan. 1, 1907, the length of railways was 2,915 miles, over one-half being owned by the Federal government; of State telegraph lines, 3,604 miles.

BANKING. In 1906 there were 36 banks of issue. On June 20, 1907, the National Bank, with headquarters in Bern and Zürich, commenced operations, the legal requirements being that at least one-half of the capital of 50,000,000 francs should be paid up, and that branches should be organized in no less than four banking centres. According to the banking law of 1905 the old banks of issue were to withdraw one-twelfth of their note circulation every three months, so that by the end of three years from the date of its opening the National Bank would be entitled to its maximum issue, which is to be 240,000,000 francs. But shortly before and soon after July 20, 1907, no less than 9 banks of issue renounced their privilege, which thus accrued to the National Bank. At the end of June, 1907, the circulation of the National Bank was about 57,000,000 francs, and of the old banks of issue 190,000,000. By the end of Feb., 1908, the National Bank circulation increased to 124,000,000, while that of the old banks decreased to 106,000,000.

GOVERNMENT. The Swiss Confederation is composed of 22 cantons, each sovereign within its own sphere. The executive power of the Confederation is vested in a Federal Council of 7 members, elected for three years by the Federal Assembly. The president and vice-president of the council are chosen by the Federal Assembly from among the councillors for one year. The president of the council is president of the Confederation; for 1908 Dr. E. Brenner was chosen, and for 1909 Dr. A. Deucher. The legislative power is vested in the Federal Assembly, consisting of the council of estates and the national council, the two houses having equal authority in all matters. The council of estates, or Federal Senate, consists of 44 members, 2 from each canton, the mode of election, tenure, remuneration, etc., being left for the determination of the cantons. The national council is composed of 167 members, elected by direct universal suffrage for three years, one deputy for every 20,000 inhabitants. The number of deputies allotted to each canton varies from 29 for Bern to 1 each for Uri and Zug. The powers of the Federal government extend to war, peace, treaties, army, money, post and telegraphs, weights and measures, foreign trade, copyright, bankruptcy, patents, public works affecting the whole or a large part of the country, the regulation of rivers and forests, the construction of railways, etc. The principles of the referendum and popular initiative have been applied to the Federal government, as well as to that of several of the cantons. In some of the smaller cantons the government is a direct democracy.

FINANCE. The revenue and expenditure of the Confederation for 1907 amounted to 145,914,260 and 139,310,086 francs, respectively; for 1908 they were estimated at 147,025,000 and 148,190,000 francs, respectively. The principal estimates of revenue for 1908 were: Customs, 70,880,000 francs; posts, 51,948,400; and telegraphs, 13,718,000; and of expenditure: Public debt, 6,268,500; military, 39,557,546; posts, 49,350,100; and telegraphs, 13,718,500. The revenue and expenditure of the Federal railways are not included in the budget. The Federal

debt stood on Jan. 1, 1908, at 98,779,086 francs, and the Federal assets at 294,371,352.

ARMY. The army is a national militia in which service is compulsory and universal between the ages of 17 and 49 years, actual service beginning at the age of 20. Exemptions are few, except for physical disability, and those who are excused or rejected pay certain taxes in lieu of service. The first 13 years (11 for cavalry) is spent in the *Auszug* or *Élite*, which constitutes the first line; the next 8 years (12 for cavalry) in the *Landwehr*; and the remaining 8 years (6 for cavalry) in the *Landsturm*, which is divided into two parts. The "armed" *Landsturm* includes all who have passed through the *Auszug* and *Landwehr*, and those fit to bear arms who have not been so trained; the "unarmed" *Landsturm* comprises all other males between 20 and 50 years of age, whose service can be utilized as non-combatants. The initial periods of training are 65 days for infantry, 75 for field artillery, and 90 for cavalry troops; the infantry has 7, and the cavalry 8, subsequent periods of training of 11 days each, after which all under the rank of sergeant are excused from further attendance. The *Landwehr* men are called out once for 11 days training. The field army consists of 4 army corps with a total of 200,000 combatants, in addition to which there are 21,000 fortifications troops, and the armed *Landsturm* of about 50,000. The peace army consists of 139,514 men of all grades in the *Élite*, and 94,384 in the *Landwehr*, making a total of 233,898.

HISTORY.

PROHIBITION OF ABSINTHE. On July 5, 1908, the law forbidding the sale and manufacture of absinthe was carried by popular vote. The campaign against the consumption of absinthe had lasted three years. In the summer of 1905 a murder and suicide, caused by absinthe intoxication, in the canton of Vaud, greatly aroused public feeling, and a petition with 83,000 signatures was presented to the government of the canton for the suppression of the traffic in the liquor. The government, after consulting a commission of jurists and physicians, passed a law prohibiting the retail trade in absinthe throughout the canton, to go into effect on Jan. 1, 1907. The absinthe dealers and manufacturers demanded a referendum, but the law was approved by a vote of 23,000 to 15,000, and though appeal was made to the Federal Council, the right of the canton to take this action was sustained. The same course was followed in the canton of Geneva, where nearly double the quantity of absinthe was annually consumed, and a prohibitory measure was passed, to go into effect on Jan. 1, 1908. This attacked only the retail trade. The manufacture and wholesale trade could be reached only by the Federal government. Accordingly the Anti-Alcoholic League petitioned the Federal authorities to incorporate in the constitution a clause prohibiting the manufacture, importation, or sale of absinthe throughout the Confederation. The petition was signed by 168,000 citizens. The Federal Council was opposed. The government, while admitting the evil, argued that the best means of suppression were persuasion and popular education. Moreover, though its consumption was extensive in the French cantons, it was little known in the German cantons, that is, in the greater part of the Confederation. In the Federal Assembly, however, the deputies of the French cantons

presented strong arguments, which finally prevailed, and the proposal of the petitioners was approved. The State Council having concurred in this decision, the measure was submitted to the people and carried by 100,000 votes.

LABOR MEASURES. On the same day (July 5) that the above measure was voted, the people approved the addition to the constitution of an article empowering the Federal government to make laws affecting the arts and crafts. For many years a Federal code that would afford the same legal protection to small industries that the large industries possessed had been under consideration. In 1894 a similar addition to the powers of the Confederation had been proposed, but was rejected by the popular vote, public opinion not being clearly informed of the government's intentions. The new measure authorizes the government to make laws for the regulation of apprenticeship, labor contracts, associations of employers and employees, for the suppression of the abuses of strikes, the establishment of means of arbitrating industrial disputes, etc. On Oct. 7 the National Assembly passed the bill for insuring workmen against sickness and accident. An earlier project providing for an obligatory system of Federal insurance with a costly bureaucratic organization was rejected by popular vote. The new bill established insurance against sickness on the principle of Federal cooperation with private initiative providing for Federal subvention of existing sick benefit societies. For insurance against accidents it provided for a state establishment with a capital of 10,000,000 francs, the state to pay half the cost of maintenance and a certain quota of the premiums, the rest to be contributed by employers and employees in the ratio of three to one; insurance in it to be obligatory on all employers and employees in occupations mentioned in the law.

SYRACUSE UNIVERSITY. An institution of higher learning at Syracuse, founded in 1870. The attendance in 1908 was 3,204, distributed as follows: Liberal arts, 1,422; fine arts, 880; medicine, 152; law, 180; applied science, 390; teachers college, 102; summer school, 189. The total property owned and used by the institution was valued in 1908 at \$2,874,532. The entire investments at the end of the year were \$2,108,373. The faculty numbers 220, and the library contains 90,000 volumes. The president is James R. Day.

SYRIA AND PALESTINE EXCAVATIONS IN. See *ARCHÆOLOGY*.

TAFT, CHARLES P. An American newspaper publisher. He was born in Cincinnati on December 21, 1843, graduated at Yale in 1864, and at the Columbia College Law School in 1866; and also studied at Heidelberg, Berlin, and Paris. He practised law from 1869 to 1879 and then bought the controlling interest in the Cincinnati *Times*, which was consolidated with the *Star* in 1880. In 1894 he was elected to Congress on the Republican ticket, and he served in that body until 1897. He was elector-at-large in 1904, and in 1908 he was a candidate for the Republican nomination for United States Senator from Ohio, but withdrew from the contest in December in the interest of party harmony. He is a half brother of W. H. Taft.

TAFT, WILLIAM HOWARD. Elected President of the United States in 1908. He was born in Cincinnati, Ohio, on Sept. 15, 1857, a son of

Alphonso Taft, who was Attorney-General of the United States in 1876-77. He attended the public schools of Cincinnati, and graduated at Yale in 1878, second in his class of one hundred and twenty-one members, and salutatorian at the commencement exercises. Two years later he graduated at the Cincinnati Law School, and in the same year (1880) was admitted to the Ohio bar. During the next year he was law reporter for the Cincinnati *Times*, and then for the Cincinnati *Commercial*. He entered public life as assistant prosecuting attorney for Hamilton County, Ohio, in 1881, and with the exception of the period 1883-87, when he practised law in Cincinnati, has since remained in it, with steadily increasing responsibilities. He was collector of internal revenue for the first district of Ohio, in 1882-83; county solicitor of Hamilton County, in 1885-87; judge of the Superior Court of Ohio, in 1887-90; solicitor-general of the United States in 1890-92; dean and professor of the law department of the University of Cincinnati, in 1896-1900; United States circuit judge of the Sixth Circuit, in 1892-1900; president of the Philippine Commission from March 13, 1900, to Feb. 1, 1904; first civil governor of the Philippine Islands from July 4, 1901, to Feb. 1, 1904; and Secretary of War from the last-named date until June 19, 1908. Incidentally, he visited Rome, in June, 1902, and conferred with Pope Leo XIII. in the matter of the purchase by the United States of certain agricultural lands belonging to Roman Catholic orders in the Philippines; in September, 1906, was sent by President Roosevelt to Cuba to restore order; in March and April, 1907, visited Panama, Cuba, and Porto Rico; and in May-December of the latter year made a tour around the world by way of Shanghai, Manila, Moscow, St. Petersburg, and Berlin.

During this long and varied career Mr. Taft's most valuable services to his country have, doubtless, been those rendered while he was president of the Philippine Commission, and civil governor of the Philippine Islands. He had been opposed to the taking of the islands by the United States because, he said, it involved "the assumption of a burden by us quite contrary to our traditions and at a time when we had quite enough to do at home." The task he confronted there was an exceedingly difficult one. The insurrection was well under control (though Aguinaldo was not captured until March, 1901), and Mr. Taft began almost at once to enforce his policy of "the Philippines for the Filipinos." This involved the replacement of the old church-state régime, antiquated, inefficient, and corrupt, by an intelligent and honest system of government, in keeping with American political institutions, and incidentally the substitution, as rapidly as possible, of civil for military authority, a process which caused much dissatisfaction among the soldiers. Another delicate matter, requiring both diplomacy and firmness, was the acquisition of the lands of the friars, who had been driven out of the islands during the war, but whose title to their property was recognized by the United States. Mr. Taft's plan was to buy all of this property from the religious orders concerned, and sell it back to natives who would become occupants of it. His visit to Rome and his interview with the Pope resulted in the adoption of his plan for effecting this transfer. The Pope sent a special delegate to the Philippines to appraise the lands, and in December, 1903,

WILLIAM H. TAFT
SECRETARY OF WAR AND ELECTED PRESIDENT OF THE UNITED STATES, 1908

the negotiations were ended by the payment of \$7,239,000 for them. Under Mr. Taft's governorship the condition of the islands steadily improved. Mr. Taft visited the Philippines again in October, 1907, and on the 16th of that month opened the first session the National Legislature at Manila. During the journey around the world (above referred to), Mr. Taft had a private audience with the Emperor of Japan (Oct. 2), and while in Tokio delivered an address in which he spoke with great earnestness of the friendly feeling of the American government for the Japanese, an expression which did much to allay the irritation in Japan over the treatment the natives of that country had been receiving on the Pacific Coast. At St. Petersburg, on Dec. 3, he also spoke effectively on the subject of world peace. Mr. Taft again showed his tact, patience, and firmness in dealing with the situation arising from the failure of the Cuban government in 1906. He arranged for the occupation of the island by United States troops until order had been restored and a provisional government reestablished, which was accomplished under Charles E. Magoon.

On the bench, Judge Taft frequently showed both ability and courage in high degrees, the latter quality being especially evidenced during the great railway strike of 1894. In sentencing Pnelan, the labor leader who was fomenting the strike in Cincinnati, to six months in jail for violating the injunction which sought to restrain his activities, Judge Taft pronounced the dictum that "the starvation of a nation cannot be a lawful purpose of a combination," and then in the face of the ugly attitude toward him of some of the labor leaders, virtually threatened to use the United States troops, if necessary, to run the trains. In this connection may be noted President Roosevelt's desire to appoint Mr. Taft to the bench of the United States Supreme Court, in 1902, a position it had always been his ambition to hold, and which he declined solely because he believed it to be his duty to stay in the Philippines. It is also interesting to note that in 1899 certain members of the Corporation of Yale were very anxious to have Mr. Taft permit his name to be considered for the presidency of that university, and that he declined because he considered himself "necessarily lacking in the wide culture, breadth of learning, and technical preparation in the science of education which are needed to discharge the duties" of such a position. (See PRESIDENTIAL CAMPAIGN.)

Mr. Taft's election to the presidency, while of course expected, was received with general approval by the country at large, irrespective of party, and especially by the conservative interests. His judicial training, his long and successful experience as an administrative official, and his demonstrated ability to deal with many difficult situations with diplomacy and tact was such that he was universally conceded to be in a position to take up the work of the presidency with qualifications and experience that had been the fortune of few, if any, former occupants of this office. At the close of the year the coming administration was anticipated as one that would largely eliminate the unfortunate friction that in many instances had characterized President Roosevelt's second term. It was believed that Mr. Taft's calm and judicial mind would make no less for efficiency in the operations of the government than for the restoration of normal conditions throughout the country, and gen-

eral prosperity in so far as it could be brought about by the conservative influence of the Chief Executive.

TALL BUILDINGS. The tower of the Metropolitan Life Insurance Company's building at 24th street and Madison avenue, New York city, which, next to the Eiffel Tower in Paris, was the tallest building in the world in 1908, had 37 feet added to its originally planned height, thus giving it a total number of stories, including the two in the basement, of fifty, and an elevation above the pavement to the top of the glass ball, of 693 feet. The extra elevation was gained in the octagonal tower which was designed to contain a powerful electric lantern, while an observation balcony was located 862 feet above the sidewalk. Work on the exterior was almost completed at the end of the year, the great clock and a few minor details of the tower alone needing attention, while portions of the interior already were in use for office purposes. The tallest office building in the world was announced for possible erection upon the site occupied by the Mills building at Broad street and Exchange place, New York city. This would exceed the height of both the 909-foot structure proposed during the year for the Equitable Life Insurance Society, and the Eiffel Tower, and with its height of 1,000 feet would make the Metropolitan and Singer buildings look small in comparison. The architect for the design, it was stated, would be Mr. Ernest Flagg, who designed the 612-foot tower of the Singer building, completed in 1907.

TARIFF. UNITED STATES. During several years there has been an increasing demand for tariff revision. This demand became an important political factor when it was taken up by various manufacturers throughout the country. In the first week in February a delegation of business men called upon the President and the Speaker to demand revision. They asked for a more scientifically constructed system, one more in accord with actual industrial conditions. This delegation was composed of Republican protectionists. At the same time there was before Congress a bill drawn by Senator Beveridge providing for a non-partisan tariff commission. Taft, Hughes, Bryan, and other political leaders declared in favor of revision. The Republicans in Congress forestalled the Democrats, so far as making an effective campaign issue out of the subject was concerned, by declaring in favor of "revision of the tariff by its friends," and by authorizing the appropriate committees of the Senate and House to make investigations during the summer and fall, preparatory to legislation. Numerous State political conventions in May and June declared in favor of revision. At their national conventions both parties pledged themselves to revision. See PRESIDENTIAL CAMPAIGN.

The hearings held in November by the House Committee on Ways and Means attracted wide attention. Most of the evidence presented was given by manufacturers and others directly interested. Consumers were urged to attend, but it was pointed out that consumers are unorganized and singly would have no influence. It was urged that such persons could not be expected to spend time and money in a futile trip to Washington. Mr. Charles Francis Adams of Boston made these points very clear. In a much-discussed letter he divided those directly and fi-

nancially interested in the tariff as "either thieves or hogs." Though he classed himself with the former, saying that the tariff gave him a license to steal and forced him to use it in order to prosecute his business, he expressed his desire that the tariff schedules be so reduced as to take away all special favors. The testimony of Mr. Andrew Carnegie and of Judge E. H. Gary of the United States Steel Corporation excited keen interest. Mr. Carnegie declared that the steel industry in this country needs no protection, citing as proof the fact that the trust last year made a profit of more than \$15 per ton on its output. In the December *Century* Mr. Carnegie gave further damaging testimony on the need of protection in the steel industry. Chairman Gary admitted that his corporation could compete with the world, but stated that smaller concerns would probably be forced out of business by hasty reductions of rates. Following repeated insistence by Mr. Taft that there should be an honest revision or none, the Payne committee hearings became less perfunctory and less hasty than they were at first. Especially was more time and attention given to those favoring revision. The subject of "dumping" was considered. It was shown that manufacturers seeking increased protection were selling abroad at 40 per cent less than at home; and that they were besides paying the cost of transporting goods to Europe and Australia. It was made clear that the high tariff wall, making the large American market inaccessible to foreign competitors, facilitated combination and trust formation with consequent monopoly within the protected territory.

The newspapers made a vigorous and concerted attack on the tariff on wood pulp, claiming that this schedule enabled a monopoly to control the supply of news-print paper. This demand for free wood pulp was seconded by a plank in the Democratic platform. It was also instrumental in furthering inquiry by the Bureau of Corporations into the position of the paper trust.

A maximum and minimum tariff was proposed in the Republican platform, the object being to make possible retaliation upon any country discriminating against American goods. Maximum rates could be enforced against goods from such a country. This proposal was due mainly to the narrowly averted tariff war with Germany in 1907. The new German tariff of 1906 made extensive provisions for reciprocity, but the United States Senate did not show favor for such an arrangement. Trade war was only averted by an agreement between Secretary of State Root and Baron Sternburg, the German Ambassador, granting Germany "most favored nation" terms. Moreover, various concessions were granted to the Germans regarding invoicing and the recall of any American trade agents who become obnoxious to German manufacturers. These agents are maintained abroad to ascertain the cost of producing goods so as to prevent undervaluation when imported. France was stirred by these concessions and, entrenched behind a high tariff, began to threaten higher rates on American goods. At the instance of the State Department similar concessions were granted to France, and in Feb., 1908, a very limited reciprocity agreement was made. This favored mineral oils (petroleum) from the United States, coffee and cocoa from Porto Rico,

and champagne from France. Moreover, a tariff commission was sent to France (1) to investigate the grounds of discontent with present tariff methods, and to report how these may be removed; (2) to analyze conditions so as to show the correct basis for a reciprocity treaty; and (3) to inquire particularly into regulations governing the importation of French canned goods and medicinal preparations and the exportation to France of canned and dressed meats. The Pure Food and Drugs act has caused considerable friction with French trade.

ENGLAND. In England the subject of an alliance of the various parts of the British Empire, especially Great Britain and Ireland with Canada and Australasia, by means of preferential tariff rates received continued discussion. Since the Colonial Conference of 1907, however, the Chamberlain scheme for preferential rates has had less and less likelihood of realization. That conference showed that, although the colonies might do their part by lowering established rates on English goods, Great Britain could reciprocate only by abandoning her free-trade policy in imposing import duties on all goods except those from her colonies. The subject is kept before the public by the investigations of the tariff commission. This commission was appointed after the pronouncement by Mr. Joseph Chamberlain in 1902 in favor of a policy of protection with colonial preference. It has appointed committees to investigate specified industries, composed in each case of persons familiar with and interested in the industry investigated. These committees hold hearings at which manufacturers and dealers give testimony without cross-examination. Thus far reports have been submitted on the iron and steel, all the textile, the sugar, pottery, and glass industries, and agriculture. The reports have been uniformly favorable to the Chamberlain proposal, but opponents charge that, owing to the composition of the committees and their manner of holding hearings, the results do not represent an unprejudiced judgment. A complete and final report is yet expected from the commission.

FREE-TRADE CONGRESS. In Aug., 1906, there was held at London a Free-Trade Congress, to which delegates from all industrial nations were invited. Papers were read bearing on the advantages of a policy of unrestricted trade and the disadvantages of protective tariff systems as they are now constructed. The American and German delegates emphasized the responsibility of tariffs for the growth of trusts and cartels, because the existence of a protected zone makes combination within that zone especially advantageous. Delegates from the United States, Canada, Germany, France, and Italy all spoke of the influence of a tariff in bringing about a combination between leading industrial interests and powerful political forces, with disastrous effects on the honesty and integrity of political life.

CANADA. There was a strong demand on the part of manufacturers for protection against goods from the United States, and an almost equally eager demand on the part of farmers and some others for a preferential tariff arrangement with Great Britain favorable to Canadian grain and food products. Thus the Conservatives, who have stood for a pronounced high tariff policy and against preference for Great Britain, made gains in industrial centres

in 1908, but endured equal losses in rural sections.

AUSTRALIA. The "New Protection" inaugurated in Australia in 1907 aims to give protection to manufacturers, to safeguard the interests of consumers, and at the same time compel the manufacturers to share benefits with wage-earners. It is provided that an internal tax, equal to one-half the import duty and administered by an "Excise Tariff Court," shall be imposed on protected goods of home manufacture; but any manufacturer paying fair and reasonable wages may be exempted from such internal tax. The Excise Tariff Court has very extensive powers in gathering information to determine whether any manufacturer is paying such wages as entitle him to exemption. This law is operated in connection with the trademark law which provides that any manufacturer fulfilling legal requirements as to wages and conditions of labor shall be allowed to affix a Commonwealth trade-mark to his goods. The interests of consumers are guarded by a provision that, if prices shall be raised by a combination of workmen and employer in any industry, import duties shall be lowered. The new laws also provide preferential rates on English goods but not to such an extent as to secure much advantage to English manufacturers. In fact the new import duties are enough higher than previous ones to place English goods at a greater disadvantage than previously, in spite of the preference.

Early in the year an extremely important decision was rendered by Justice Higgins, sitting as the Court of Conciliation and Arbitration. In this he sustained as legal that section of the new laws requiring the payment of fair and reasonable wages as a prerequisite for exemption from the internal excise tax. The immediate effect was to force manufacturers into line on the wages question. The case was, however, appealed to the High Court, which, in August, reversed the decision by a vote of three to two. The majority opinion was that the section in question was not a taxing act, but an act to regulate wages and therefore unconstitutional. Both members of the government and labor leaders declared that some means of accomplishing the desired end, that is, of securing for workingmen a share of the benefits of protection, would be found. Even a constitutional amendment was said to be within the range of possible expedients.

TASMANIA. An island State of Australia. Area, 26,215 square miles; population at the end of 1907, 181,624. Hobart, the capital, had an estimated population of 35,685 on the same date. For details regarding population, education, production, etc., see **AUSTRALIA**. The executive power is vested in a governor appointed by the crown and acting through a responsible ministry. The Parliament consists of a Legislative Council of 18 members, elected for six years upon the basis of property franchise; and a House of Assembly of 35 members, elected for three years by universal suffrage. Women have the franchise for both houses. The governor in 1908 was Sir Gerald Strickland. The premier was J. W. Evans.

TATSU MARU AFFAIR. See **CHINA**.

TEA. Of the 94 million pounds of tea imported into the United States in 1908, it was estimated that practically all of it was pro-

duced in the Orient, though 9½ million pounds came from the United Kingdom, presumably the product of her Asiatic possessions, chiefly India and Ceylon; 2½ million pounds entered from British North America, the product of the Orient, reaching Canadian soil either across the Pacific or by way of Europe and the Atlantic; 47 million pounds came direct from Japan to the United States; 27¼ millions from China, and 7¼ millions from the East Indies. The United States stands third in the rank of consumers of tea imported; the quantity of tea imported into the United Kingdom in 1906 being, estimated by competent authority, at 270 million pounds; Russia, 136 millions; United States, 86 millions; Australia, 29 millions; and Canada, 26 million pounds. The United Kingdom, it will be seen, is therefore by far the largest importer of tea—its colonies, Australia and Canada, being also large importers in proportion to population. In tea the per capita consumption of the United States has somewhat reduced meantime, that of 1878 having been 1.33 pounds per capita; 1888, 1.4 pounds; 1899, 0.04 of 1 pound; and in 1908, 1.07 pounds per capita. See **CEYLON**; **CHINA**; **INDIA**.

TELEGRAPHY. The most important event of the year in the realm of telegraphy was the meeting of the quinquennial International Telegraph Conference, held in Lisbon in May, 1908. Certain alterations were made in the service regulations which govern international communication by telegraphic and telephonic means, and certain new regulations adopted relating to wireless telegraphy. In England there was considerable agitation during the year for a reduction in telegraph and cable rates. During the year plans were completed for two new transatlantic cables, one from Ireland to Nova Scotia, and the other from Germany to Brazil. The former cable was to be installed by the British and Canadian governments, and it was stated that the rate to the public will be only 10 cents a word instead of the present rate of 25 cents. On the physical side, development in telegraphy, other than wireless, has been largely in the perfecting of multiplex printing telegraphs. Such machines are now in use in a number of the larger cities, particularly in Europe. A new use for telegraph lines that first took on a commercial aspect in 1907 was for the telegraphic transmission of photographs and drawings. A number of new devices for this purpose were tested out in 1908, and Knudsen claimed that he had devised a method of operating linotype composing machines by an adaptation of his photo-telegraphic apparatus.

TELEGRAPHY, WIRELESS. See **WIRELESS TELEGRAPHY**.

TELEPHONY. During the year 1908 numerous changes were made in the organization of many of the companies in the United States. In a number of cases individual companies were merged for reasons of economy and efficiency. The formation of a company to handle long distance calls over the lines of the independent companies in this country was also decided on. The Bell toll line system completed its Denver extension during the year. A new underground toll line was completed between Chicago and Milwaukee, the cable being "loaded" with Pupin coils. Automatic and semi-automatic telephone exchanges more than held their own. A field in which the telephone is steadily gaining in

popularity is for train dispatching; during the year several large installations for this purpose were reported.

TELEPHONY, WIRELESS. See **WIRELESS TELEPHONY.**

TENNESSEE. One of the South Central States of the American union. Its area is 43,022 square miles. The population in 1908 was estimated at 2,223,094.

MINERAL RESOURCES. Considerable gains have been made in recent years in the mineral production of the State. These products aggregated in value in 1907 \$26,525,004, as compared with \$27,444,570 in 1906. The coal production in 1907 was 6,810,243 short tons, with a spot value of \$8,490,334. The generally increased production in 1907 was shared by Tennessee, but to a less extent than by many other Eastern States. Coal mining is confined to the eastern portion of the State, which is crossed by the Appalachian system, and mining operations are carried on under the handicap of having their markets in common and accordingly competitive with the coals from Alabama and southern Kentucky. The production of 1907 was an increase of 550,968 short tons in quantity over the output of 1906, with a gain of \$822,919 in the value of the output. This was the maximum production recorded in the coal mining history of the State. In 1907 12,052 men worked in the coal mines of the State. Of the coal mined, 874,925 tons were produced by the use of 137 machines. The United States Geological Survey estimates the original contents of the mining fields of Tennessee at 25,665,000,000 short tons, of which the exhaustion to the beginning of 1908 represented little less than one-half of one per cent. The coke-making industry has remained nearly stationary in the last three years, the production in 1907 having amounted to 467,499 short tons, as compared with 483,428 tons in 1906 and 468,092 tons in 1905. The value of the product, however, increased from \$1,184,442 in 1905 to \$1,350,856 in 1906 and \$1,519,225 in 1907. There were 18 coke-making establishments in the State at the beginning of 1908. The copper production for 1907 amounted to 18,893,115 pounds, as compared with 17,979,317 pounds in 1906. The value of the production of 1907 was \$3,778,623 as compared with a value for the product of 1906 of \$3,470,008. This production was entirely from the Ducktown district in Pulp county. There were produced in 1907 218,643 pounds of zinc, valued at \$12,900. There were produced in 1907 813,690 long tons of iron ore, as compared with 870,734 long tons in 1906. Tennessee ranks eighth among the States in the production of iron ore. The pig iron produced in 1907 was 393,106 long tons, as against a product of 426,874 long tons in 1906. The clay products of the State were valued in 1907 at \$1,613,862, as compared with a value for the same product of 1906 of \$1,620,226. The production of phosphate rock in 1907 was 638,612 tons, as compared with 547,677 tons in 1906. Other mineral products of the State are building-stone, lime, sand and gravel, mineral waters, and silver, also unclassified, mineral paints, natural gas and sand-lime brick. The production of coal in the State in 1908 probably fell off between 15 and 18 per cent., as compared with 1907. This decrease would probably have been greater, except for the long strike in

Alabama, which benefited the industry in Tennessee.

AGRICULTURE AND STOCK RAISING. The acreage, production, and value of the principal farm crops in 1908, according to figures of the United States Department of Agriculture, were as follows: Corn, 83,080,000 bushels, valued at \$53,171,000, from 3,350,000 acres; winter wheat, 8,198,000 bushels, valued at \$8,108,000 from 819,000 acres; oats, 3,675,000 bushels, valued at \$1,948,000 from 175,000 acres; barley, 25,000 bushels, valued at \$18,000 from 1,000 acres; rye, 100,000 bushels, valued at \$90,000 from 8,000 acres; buckwheat, 15,000 bushels, valued at \$12,000 from 1,000 acres; potatoes, 2,240,000 bushels, valued at \$1,590,000 from 28,000 acres; hay, 600,000 tons, valued at \$7,080,000 from 400,000 acres; tobacco, 52,000,000 pounds, valued at \$4,680,000 from 65,000 acres. The cotton crop of 1908 is estimated at 340,000 bales, which was a slight increase over the crop of 1907, which was 304,054 bales. The number of farm animals on Jan. 1, 1909, were as follows: Horses, 324,000; mules, 287,000; dairy cows, 334,000; other cattle, 595,000; sheep, 351,000; swine, 1,487,000. The wool clip for 1908 was 1,305,000 pounds, valued at \$352,350.

MANUFACTURES. Very considerable progress was made in manufacturing between the censuses of 1900 and 1905. The latter reported 3,175 establishments classed as factories, employing \$102,439,400 capital and 60,572 wage-earners, and manufacturing products valued at \$137,960,400. These four items were respectively 1.9, 62.2, 31.8 and 48.7 per cent. larger than in 1900. Of the wage-earners in 1905, 6,611 were women and 2,204 were children under 16. The values of products of leading industries and (in parentheses) the percentage increases over 1900 were: Flour and grist mill products, \$25,350,700 (32.3); lumber and timber products, \$21,580,000 (29.2); foundry and machine shop products, \$6,946,500 (55); railway repair shops, \$5,839,400 (87.6); printing and publishing, \$5,063,500 (46.6); planing mills, \$4,586,900 (97.4); cotton seed products, \$3,743,900 (25.6); tanned and finished leather, \$3,585,800 (27.9); cotton goods, \$3,560,984 (78.5); and iron and steel, blast furnaces, \$3,428,000 (27).

EDUCATION. The legislature of 1907 passed an act of far-reaching importance in its influence for the betterment of the schools of Tennessee. Under the provisions of this act, the county is made the union of school organization instead of the school district, and the Board of Education, composed of five members in each county, takes the place of the three district directors for each district under the old district system of organization. This act provided that all the schools of the county shall run as nearly as practicable the same number of days and also makes the county superintendent ex-officio secretary of the County Board of Education. Under this act a great number of schools have been consolidated, and teachers' salaries and the length of term increased. It has been found by far the most economical method of school administration yet found in the State. The legislature of 1907 was more liberal in its appropriation for public education than any of its predecessors. It gave, in round numbers, to the educational institutions of the State, \$1,400,000. Up to Oct. 1, 1908, thirty-five counties had established high schools. There were

9,300 teachers employed with an annual expenditure of \$3,313,771. The school population of the State, which includes all persons between the ages of six and twenty-one years, was in 1908 766,625. Of this number, 495,729 were enrolled in school and 353,016 children were in attendance for 117 days. The average compensation of teachers per month was \$37.10.

POLITICS AND GOVERNMENT. The chief local political interest of the year centered about the Democrat primary elections on June 27. Governor Patterson was a candidate for renomination, while opposed to him was Edward W. Carmack, former United States Senator. The most important issue of the campaign preceding the election was the attitude of the State on the question of prohibition or local option. Governor Patterson was the candidate of those who considered the existing local option laws sufficient in the way of temperance regulations, while Mr. Carmack and those in sympathy with him stood on the platform of State-wide prohibition. The campaign was exceedingly stirring, and abounded in bitter personal and political attacks on both sides. Governor Patterson was renominated by a majority of 7,500. The feeling generated by this conflict was generally considered the moving cause in the killing of Mr. Carmack at Nashville on Nov. 9 (see below). On April 11, the Standard Oil Company was prohibited from carrying on business in the State (see **STANDARD OIL**).

CONVENTIONS AND ELECTIONS. Factional differences disorganized the Republican party of the State, and two distinct conventions were held for the selection of delegates to the National Convention, on March 25 and 26 respectively. The State Convention was called for the former date, but the opposing elements clashed. The faction controlled by H. Clay Evans withdrew from the convention hall, leaving the so-called Brownlow faction in control. This body endorsed President Roosevelt's administration, but did not instruct the delegates. Resolutions were adopted condemning the pernicious activity of Federal office-holders. The Evans faction at its convention, held on the day following, instructed the delegates chosen to vote for W. H. Taft for President and H. Clay Evans for Vice-President. The Democratic State Convention to choose delegates to the National Convention met on June 14 at Nashville. The delegates were instructed to vote for W. J. Bryan for President. The factional quarrel between the Brownlow and Evans factions of the Republican party resulted again in two separate conventions for the nomination of State officers. The Evans faction on Aug. 12 nominated G. M. Tillman for governor. Both conventions adopted resolutions in favor of State-wide prohibition. In the election of Nov. 3 the Democratic party had a plurality in the State of about 17,000 and the entire Democratic ticket was elected. The total vote for National and State tickets was as follows: Bryan, 135,819; Taft, 118,519; Chafin, 268; Debs, 1,882; Patterson, 133,913; Tillman, 113,033.

OTHER EVENTS. The year was a troubled one in the history of the State from the aggressions of the "night riders," who were responsible for several remarkable atrocities. While certain of these disorders were the result of the conflict between the tobacco growers and those who sought to control its output, the most notable outrage had nothing to do with the to-

bacco war, but had its sources in other causes. On Jan. 22, an attempt was made to dynamite the tobacco factory of the Hayes-Sorey Tobacco Company at Clarksville. Two negroes were killed while trying to escape. The attempt was unsuccessful. At the same place on March 10, Brown Bennett, son of an association tobacco appraiser, was killed by shooting. It is believed that the young man was a "night rider" and was shot down by parties whom he and his gang had attacked. On Oct. 20, thirty or more masked and armed "night riders" kidnapped from a hotel in the village of Walnut Log on Reelfoot Lake Captain Quentin Rankin and his law partner, R. Z. Taylor, together with a surveyor and a guide. Captain Rankin's body was found hanging to a limb of a tree on the shores of Reelfoot Lake, filled with bullets and buckshot. It was feared that Col. Taylor, too, had been killed, but he escaped from his captors and reached the village of Trenton in safety on Oct. 22. The cause of this trouble dates back to 1906, when Judge Taylor and Captain Rankin, acting for a syndicate, began buying up all the land bordering Reelfoot Lake, which is a large body of water many miles in extent, well known for its good fishing. The closing of this lake to local fishermen caused bitter feeling among the inhabitants, who had relied to a large extent upon the money obtained from visiting sportsmen for their livelihood. Many threats had been made to harm the projectors of this enterprise to secure the lake, but they had been disregarded. Armed posses were at once organized as soon as the crime had been discovered, and Governor Patterson offered \$10,000 for the arrest and conviction of one or more of those who had taken part in the lynching of Captain Rankin. Two companies of militia were at once ordered from Nashville to the scene and the locality was placed under martial law. On Oct. 23, three men were arrested by the State troops for connection with the murder of Captain Rankin, and on Oct. 25, fifty-one more persons were taken in charge by the troops. On Oct. 28, twenty-one more were arrested. A court of inquiry was established at Union City and many witnesses were examined. Attorneys for certain of those under arrest applied for writs of habeas corpus and on Oct. 7 Judge Jones decided in favor of the State, denying the application of the prisoners for release from the custody of the military authorities. These cases involved the governor's right to call out the militia. At the trial held in the latter part of December, members of the band of "night riders" confessed to many outrages which had been perpetrated by these bodies. The case had not been decided at the close of the year.

Disturbances arose on Aug. 18 at a mining camp near Jellico between negroes and white miners, which resulted in the driving of all the negroes from the camp. This action arose from alleged disturbances created by the negroes which were objected to by the white miners. It was reported that a cabin in the camp was burned and 6 negroes cremated.

On Nov. 9, Edward Ward Carmack, former United States Senator, and editor of the *Tennessean*, was shot and killed by Robin Cooper, son of Col. Duncan B. Cooper, of Nashville. Mr. Carmack and Col. Cooper had been bitter political opponents and during the political campaign,

and afterward, great enmity had arisen between them, chiefly, it was said, on account of editorials in Mr. Carmack's newspaper. Robin Cooper and Col. Cooper were both arrested, together with John D. Sharpe, former sheriff of Nashville, who was charged with aiding and abetting the murder of Senator Carmack. Both Col. Cooper and Mr. Sharpe are among the best known politicians in the State. Both were prominently identified with the campaign which resulted in the reelection of Governor Patterson.

On April 26 great damage was done in Memphis by wind and rain. Street cars were blown from the track and smoke stacks and walls were blown down. The United States Senate on March 2 appropriated \$25,000 for the care of the Hermitage, the homestead of President Andrew Jackson.

STATE OFFICERS. Governor, Malcolm R. Patterson, Dem.; Secretary of State, John W. Morton; Treasurer, R. E. Folk; Commissioner of Agriculture, John Thompson; Superintendent of Public Instruction, R. E. Jones; Comptroller, Frank Dibrell; Adjutant-General, Tully Brown; Attorney-General, Chas. T. Cates—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, W. D. Beard; Justices, John S. Wilkes, W. K. McAllister, M. M. Neil, and John K. Shields; Clerk, Joe J. Roach—all Democrats.

The State legislature of 1909 is composed of 27 Democrats and 6 Republicans in the Senate, 78 Democrats and 21 Republicans in the House. The State representation in Congress will be found in the article UNITED STATES, under the section *Congress*.

TETANUS. Cases of tetanus arising from Fourth of July injuries are collected yearly by the *Journal of the American Medical Association*. In 1908 there were 76 cases reported. The most common cause of the wound was the blank cartridge. Following the injury it required an average of 8 days for symptoms of tetanus to appear—the incubation period. After the appearance of symptoms death occurred in the fatal cases in from 16 hours to 3 days, the average being about 36 hours. Out of the total of 76 cases, 55, or 72 per cent., ended fatally, as against 85 per cent. in 1907 and 84 per cent. in 1906. It is pointed out that tetanus more often developed in supposedly insignificant wounds, as these were neglected, while extensive lacerated injuries were treated by physicians. Besides the cases of lockjaw directly due to celebration of the Fourth of July, there were 166 cases of tetanus reported during this season. As a result of the publicity given to injuries from fireworks (163 deaths and 5,460 non-fatal injuries occurred in 1908), attempts were made in many places to lessen this annual sacrifice. Restrictions as to the character of fireworks, shortening the time of celebration, or even absolute prohibition were adopted in certain cities. In St. Paul, Detroit, and other cities efforts were made to substitute a different form of celebration for fireworks. In the former place a mammoth children's meeting was held at the Auditorium, with bands, flags and bunting, confetti, etc., for amusing the children.

TETRAZZINI, LUISA. An Italian lyric soprano. She was born in Florence, in 1874, and made her operatic debut in Rome, after only

three months' regular study at the Florence conservatory. She then went to South America, where she remained four seasons. Subsequently she appeared in Madrid, in Russia (seven consecutive seasons), Cuba, Mexico City, San Francisco, Paris, and London. On Jan. 15, 1908, she made her first appearance at the Manhattan Opera House, New York City, singing "Violetta" in Verdi's *La Traviata*. She was reengaged at the Manhattan for the season of 1908-1909. Her voice is flexible, pure in tone, and of extraordinary range.

TEXAS. One of the South Central States of the American Union. It is the largest State in the Union and has an area of 265,896 square miles, of which only 3,498 square miles consist of water surface. The population, according to a Federal estimate made in 1908, was 3,699,255.

MINERAL RESOURCES. The petroleum production of Texas suffered a slight decrease in 1907 from the amount produced in 1906. The figures for the former year were 12,322,696 barrels, as compared with 12,567,897 barrels in 1906. The decline was most noticeable in the Humble, Batson, and Hoskins mounds. Texas ranks fourth among the States in the production of petroleum, being surpassed only by the Oklahoma-Kansas field, California, and Illinois. The value of the production in 1907 was \$10,401,863 as compared with a value of \$6,565,578 for the product of 1906. The decrease in the production of petroleum in Texas since 1905 has given an additional impetus to coal mining in the State. The amount produced in 1907 was 1,648,069 short tons, with a spot value of \$2,778,811. The production in 1906 was 1,312,873 short tons, valued at \$2,178,901. The larger proportion of the increase in the production of coal in the State in 1907 was from the lignite producing areas, the output of lignite having increased from 472,888 short tons in 1906 to 787,732 short tons in 1907. The production of bituminous coal increased from 829,935 short tons in 1906 to 940,377 tons in 1907. The coal mines of the State gave employment in 1907 to a total of 4,227 men. The United States Geological Survey estimates the original supply of bituminous coal in Texas at 8,000,000,000 short tons and of lignite at 23,000,000,000 tons, making a total of 31,000,000,000 tons as the original supply. From this there had been produced to the beginning of 1908 a total of 14,444,948 short tons. The clay products of the State were valued in 1907 at \$2,557,561, a substantial increase over the value of the output in 1906, which was \$1,969,598. The stone products of the State were valued in 1907 at \$497,962, as compared with a value of the product in 1906 of \$518,719. Of this product, limestone made up the greater part. The output of quicksilver in the State in 1907 was 3,686 flasks of 75 pounds each, valued at \$148,387, as compared with an output in 1906 of 4,761 flasks. Lime was produced in 1907 to the amount of 38,101 short tons, valued at \$186,372. Among other mineral products of the State are coal products, asphalt, silver, salt, sand and gravel, mineral waters, also unclassified, cement, copper, gypsum, iron ores, pig iron, lead, natural gas, and sand-lime brick. According to figures by the United States Geological Survey, from whose reports the statistics given above are taken, the value of the total mineral production of the State in 1907

was \$19,806,458, as compared with a value of \$14,751,037 in 1906. Estimates indicated that the production of bituminous coal in the State for 1908 would be about the same as the production in 1907. The production of lignite will probably show a decrease of 20 per cent. about one-half of which is due to the effects of the panic and one-half to the competition of fuel oil.

AGRICULTURE AND STOCK RAISING. The acreage, production, and value of the principal farm crops in 1908 were as follows, according to figures of the United States Department of Agriculture: Corn, 201,848,000 bushels, valued at \$119,090,000 from 7,854,000 acres; winter wheat, 10,164,000 bushels, valued at \$9,961,000 from 924,000 acres; oats, 21,675,000 bushels, valued at \$11,271,000 from 750,000 acres; barley, 96,000 bushels, valued at \$75,000 from 4,000 acres; rye, 62,000 bushels, valued at \$61,000 from 4,000 acres; rice, 9,142,500 bushels, valued at \$7,588,275 from 265,000 acres; potatoes, 3,550,000 bushels, valued at \$3,479,000 from 50,000 acres; hay, 1,072,000 tons, valued at \$8,844,000 from 650,000 acres; tobacco, 2,400,000 pounds, valued at \$600,000 from 3,000 acres. The corn crop of 1908 showed a considerable increase over that of 1907, which was 155,589,000 bushels. In the production of rice, the State ranks second, being surpassed only by Louisiana. The rice crop of 1908 was practically the same as that of the previous year, with a slightly decreased acreage. The cotton crop of 1908 was estimated at 3,917,000 bales. The State has long ranked first in the production of cotton. The production in 1908-09 showed a marked increase over that of 1907-08, which was 2,490,000 bales. The farm animals on Jan. 1, 1909, were estimated by thousands as follows: Horses, 1,342,000; mules, 688,000; dairy cows, 1,126,000; other cattle, 7,668,000; sheep, 1,853,000; swine, 3,304,000. The wool clipped in 1908 was estimated at 8,775,000 pounds, valued at \$1,534,748.

MANUFACTURES. Very rapid progress has been made since 1900 in manufacturing. The special census of 1905, covering only establishments classed as factories, reported 3,158 such establishments, with \$115,664,800 capital, 49,066 wage-earners, and products valued at \$150,528,300. These four items showed increases over their values in 1900 of 1.6, 81.7, 27, and 62 per cent. respectively. Of the wage-earners in 1905, only 2,479 were women and only 821 were children under 16. Following is the value of products of leading industries in 1905 and (in parentheses) the per cent. of increase over 1900: Flour and grist mill products, \$22,083,000 (84.8); cottonseed products, \$18,698,800 (33.5); lumber and timber products, \$16,278,200 (63.7); slaughtering and meat packing, \$15,620,900 (300); railway repair shops, \$10,472,700 (26); printing and publishing, \$7,782,000 (70); foundry and machine shop products, \$4,952,800 (84.6); cleaning and polishing rice, \$4,640,000 (value in 1900, \$12,000); malt liquors, \$4,153,900 (54.4); and saddlery and harness, \$3,251,500 (24). Texas held first place in the manufacture of cottonseed oil and cake in both 1900 and 1905. Other important industries are petroleum refining, and lead smelting and refining. The values produced by leading centres in 1905 were: Dallas, \$15,627,600; Houston, \$13,564,000; San Antonio, \$7,402,000; Fort Worth, \$5,668,300; Galveston, \$2,996,600; and Waco, \$2,979,800.

FINANCE. The report of the State treasurer showed a balance on Sept. 1, 1907, of \$1,403,974. The receipts for the year following, ending Aug. 31, 1908, were \$10,741,035.03. The disbursements amounted to \$10,743,211.45, leaving a cash balance on hand Sept. 1, 1908, of \$1,401,798.10. There were on hand Sept. 1, 1908, bonds to the value of \$16,387,392.03. These bonds are held by various school funds, of which the permanent school funds form the greater part, \$15,136,807.53. The State bonded debt is \$3,989,400, which is nearly all owned by school funds. There is no sinking fund.

CHARITIES AND CORRECTIONS. Among the charitable and correctional institutions of the State are the North Texas Hospital for the Insane at Terrell; the Texas Deaf and Dumb Asylum at Austin; the State Orphans' Home at Corsicana; the State Lunatic Asylum at Austin; the Institute for the Deaf, Dumb, and Blind colored youths of Texas; School for the Blind at Austin; Texas State Penitentiaries; the Southwestern Insane Asylum at San Antonio; and the State Epileptic Colony at Abilene.

POLITICS AND GOVERNMENT. The year 1908 was a stirring one in the local political history of the State. Agitation was begun early in the year for State-wide prohibition, and the proposition to submit a prohibition amendment to the people was the chief issue of the Democratic primaries held on June 25, and was carried by a margin of only 5,000 votes. The opponents of the measure declared, however, that the proposition was defeated because it did not receive a majority of all the votes cast. Thousands of voters did not vote at all on the proposition. In order to settle the matter beyond question, the Democratic State Convention adopted a resolution instructing the legislature to submit to a vote of the people at a future election a constitutional amendment providing for State-wide prohibition. As the legislature of 1909 will be overwhelmingly Democratic, such action is practically assured. The conflict between the State and the Waters-Pierce Oil Company carried on in 1907, continued in 1908. H. Clay Pierce, president of the company, was indicted in Feb., 1907, for false swearing, in testifying that the Waters-Pierce Company was not connected with any other company, when, it was alleged, he knew that it had entered into an agreement with the Standard Oil Company to control prices in Texas, and that the latter company had a controlling interest in the Waters-Pierce. Mr. Pierce was arrested in May, but resisted extradition and appealed to the Federal courts. This appeal finally reached the United States Supreme Court, which, on Jan. 1, 1908, decided that Mr. Pierce must return to Texas for trial. On Feb. 26 the State Supreme Court decided that the Waters-Pierce Company must pay \$1,623,000 penalties and retire from business in the State. The company appealed to the United States Supreme Court. See STANDARD OIL.

CONVENTIONS AND ELECTIONS. The chief interest of the Democratic primary elections held on May 2 to elect delegates at large to the Democratic National Convention, centred about the candidacy of Senator J. W. Bailey for head of the delegation. Senator Bailey was charged in 1907 with having had improper relations with the Standard Oil Company and other corporations. He was acquitted of these charges at a legislative investigation, but there remained

a strong sentiment against him in the State, and his election or defeat was looked upon as a test of the confidence which the voters of the State had in him. After a very spirited campaign, Senator Bailey was elected delegate at large by a majority of 17,927 in a total vote of 214,532. At the Democratic State Convention, held on May 27, the delegates chosen for the National Convention were instructed to vote for W. J. Bryan. At the Republican State Convention, held on May 15 at Dallas, instructions were given for W. H. Taft. The results of the Democratic primary election held on June 25, as regards the prohibition amendment, are given in the paragraph above. State officers were also nominated at this time, and Governor Campbell was nominated for reelection over R. R. Williams. The Democratic State Convention for the nomination of a State ticket was held on Aug. 10. In accordance with the results of the State primary held on June 25, Governor Campbell was renominated. The chief interest was the disposition of the amendment for State prohibition, and the result is indicated in the preceding paragraph. The Republican State Convention also met on Aug. 10. John N. Simpson was nominated for governor. In the election of Nov. 3, the Democratic party carried the State, as always, by a large majority. The entire Democratic State ticket was, of course, elected. The total vote for National and State tickets was as follows: Bryan, 216,737; Taft, 65,602; Debs, 4,895; Chafin, 1,634; Campbell, 206,198; Simpson, 70,850. At an election held at Dallas on April 8, three women were elected to important city offices.

OTHER EVENTS. On Feb. 26, the International and Great Northern System of Texas was put in the hands of a receiver. It was claimed by the officials of the road that this action was forced by the ordering of \$2,000,000 spent in betterments by the State Railroad Commission. The receiver was appointed by the Federal Courts. (See RAILWAYS.) An important decision affecting the railroads of the State was handed down by the United States Supreme Court on May 18. The court declared the rate law of 1905 fixing the tax rate on railroads equal to 1 per cent. on their gross earnings when wholly within the State, and a proportionate sum when partly within the State unconstitutional (see RAILWAYS). Serious damage was caused by floods in May, especially at Dallas. The railroads of the State suffered losses estimated at \$10,000,000. As a result of bitter feeling against negroes a race war broke out in the eastern part of the State in June. The trouble arose from the killing of two white men at Hemphill. Six negroes accused of the crime were taken from the jail and lynched on June 21, and on June 22 five other negroes were killed for alleged participation in the murder. Escapades of "night riders" in October in different places in the State caused Governor Campbell to offer a reward of \$100 for the arrest and conviction of any one threatening to burn a cotton gin, \$250 for conspiracy to burn gins, and \$500 for any person burning a gin.

STATE OFFICERS. Governor, T. M. Campbell; Lieutenant-Governor, A. B. Davidson; Secretary of State, W. R. Davie; Treasurer, Sam Sparks; Comptroller, John W. Stephens; Superintendent of Public Instruction, R. B. Cousins; Land Commissioner, J. T. Robison; Adjutant-General, J. O.

Newton; Attorney-General, R. V. Davidson; Commissioner of Insurance, Thos. B. Love—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Reuben R. Gaines; Associate Justices, Thomas J. Brown and F. A. Williams; Clerk, F. T. Connerly—all Democrats.

The State legislature of 1909 is composed of 30 Democrats and 1 Republican in the Senate, 130 Democrats and 3 Republicans in the House. The State representation in Congress will be found in the article UNITED STATES, under section Congress.

TEXAS FEVER. See VETERINARY SCIENCE.

TEXTILE MANUFACTURING. The *Textile World-Record*, in its annual report of mill construction in the textile trades, stated that the number of new mills built in the United States in 1908 was smaller than in any one of the previous nine years. The total was 222, as compared with 262 in 1907, and 245 in 1905, the next record for smallest mill construction. The effect of the financial conditions were seen in every branch of the textile industry and only in knitting establishments was the number of new mills in excess of the previous year. The comparative figures for new mill construction for the years 1904-1908 were as follows:

COMPARISON OF NEW MILL CONSTRUCTION.

	1908	1907	1906	1905	1904
Cotton	47	64	74	33	48
Woolen	23	25	56	38	45
Knitting	94	83	103	79	111
Silk	33	51	36	53	49
Miscellaneous	25	39	84	42	37
Totals	222	262	303	245	290

The new cotton mill construction was distributed between the New England, Southern, and Middle and Western States, North Carolina leading with 15 mills, followed by Massachusetts with 8, though the total number of spindles, 52,693, was less than half that of two large Massachusetts mills under construction and nearing completion. This is shown more fully by the accompanying table:

NEW COTTON MILLS.

	No.	Spindles	Looms
New England			
Massachusetts	8	115,000	108
Maine	1		...
New Hampshire	1		...
Rhode Island	1		10
Totals	11	115,000	118
Southern States			
Alabama	1	5,000	...
Georgia	2	10,000	240
North Carolina	15	52,693	263
South Carolina	4	23,500	200
Texas	1		...
Totals	23	91,193	762
Middle and Western States			
New Jersey	4	3,500	24
New York	1		...
Pennsylvania	8		2
Totals	13	3,500	26
Total	47	200,693	946

The total number of spindles for the world on August 30, 1908, was 128,923,659.

The total number of spindles for the United States, as reported by the Census Bureau for 1906, 1907, and 1908, is given in the accompanying table:

UNITED STATES GOVERNMENT CENSUS BUREAU.

Table of Cotton Spindles in the United States.

States	Year	No. of Mills	Cotton Spindles		*Other Spindles
			Total	Active	
Massachusetts	1908	203	9,446,380	9,415,363	63,920
	1907	204	9,158,389	9,097,236	70,462
	1906	210	8,904,725	8,790,793	
South Carolina....	1908	150	3,713,006	3,617,358	
	1907	145	3,609,969	3,502,036	
	1906	141	3,367,204	3,345,075	
North Carolina....	1908	293	2,944,404	2,861,446	8,240
	1907	276	2,681,386	2,604,444	6,556
	1906	251	2,396,703	2,341,792

*Spindles consuming cotton mixed with other fibres not shown separately for 1906.

No other State reports as many as 500,000 spindles. Of the total number of spindles, 27,964,387, in the United States August 31, 1908, 22,455,332 were ring spindles and 5,509,055 were mule spindles. Ring-frame spindles are preferred under ordinary conditions, for the ease and facility with which they may be operated. Increase in the number of ring spindles August 31, 1908, over number reported August 31, 1905, was over 4,500.

As regards the new woolen mills, none of them were large, and such as were built were designed for manufacturing worsted yarns or worsted fabrics. The number of knitting mills alone shows a gain over 1907, being 92 as compared with 83 in that year, and while there is the usual large increase in the States of New York and Pennsylvania, there are recorded 9 new mills for North Carolina and a large number scattered through the Western States. Many conditions seemed to favor the growth of the knitting industry in the South, chief of which is the number of small yarn mills in proximity to the factories and the fact that the work appeals to people living in small communities.

During 1908 there was a general depression in all branches of the textile industry, which necessarily involved curtailment of production and small or no profits to manufacturers. The stocks on hand were used up and there was little buying, but by the exercise of general prudence manufacturers and merchants, for the greater part, were able to withstand conditions, and at the end of the year were in more hopeful

shape than at its beginning. In the factories improvements in machinery were introduced and despite slack business everything was put in readiness to prepare for a general revival of commercial activity. In the South the cotton manufacturers, whose plants for the most part were very modern and well equipped, changed in many cases the character of the goods produced, and worked on those which would afford some small profit. In the cotton, as in other textile industries, labor conditions were good during the year, and labor troubles were conspicuous by their absence. The exports of cotton goods were considerably in excess of those of 1907, and in particular the exports to China, which fell off in 1907, were practically double the amounts for that year, and at the end of December this trade, which is a matter of great importance in the export business of the United States, looked rather promising.

The year was also a poor one for the woolen and worsted manufacture, but was marked by gradual improvement, so that at the end of the year conditions were not so far from normal as is shown by the accompanying tabular statement. Interest was manifested in the great strides that Passaic, N. J., had made as a textile manufacturing centre and especially its position as a centre for dress goods manufacture. This industry, first started in 1899 with the erection of a factory by a German syndicate, was followed by other mills for dress goods and worsted yarn, which proved so prosperous that in 1908 one of the largest and most up-to-date mills in the United States was begun, which is to have between 400 and 500 broad looms and 25,000 worsted spindles of the French system, as the mill was to be both a spinning and weaving plant. Passaic, at the end of 1908, was said to have 5,470 looms and over 200,000 spindles, and as a consumer of wool, as well as for making men's wear and dress goods, was pushing Lawrence, Mass., for first place. Lawrence has 8,090 looms and 236,264 spindles.

For silk manufacturing see under SILK. See also COTTON and WOOL. See also STRIKES and LOCKOUTS.

THALASSOTHERAPY. The treatment of disease by sea bathing and sea air was increasing in popularity in Europe during 1908. Both a tepid, mild sea bath and rough, vigorous surf bathing were found beneficial. In Austria, especially at Grado on the Adriatic, there is a happy combination of warm sea water with a high percentage of sodium chloride and iodide, and rachitic and scrofulous children are sent thither in great numbers, with marked beneficial results. The fourth annual Congress of Thalassotherapists was held at Fiume on this coast, on the last three days of September, 1908. The beneficent effect of sea air on tuberculosis and certain nervous diseases has long been known and taken advantage of, but the injection of sea water hypodermically is believed to be new. Remarkable results were claimed for this measure by Simon, a French physician, in tuberculosis, the intestinal ailments of infants, and in a wide range of skin diseases, for example, eczema and psoriasis. The water is sterilized and injected in graduated doses under the skin of the thigh, preferably. Sea water was also said to be drunk with benefit in tuberculosis, anæmic, and dyspepsia, one or more pints daily being taken in its natural state, sterilized, diluted, or carbonated.

THEATRE. See **DRAMA.**

THEOSOPHICAL SOCIETY, THE. An organization founded in New York City in 1875. Its headquarters were removed in 1879 to Adyar, Madras, India. The objects of the society are: To form a nucleus of the universal brotherhood of humanity, without distinction of race, creed, sex, or color; to encourage the study of comparative religion, philosophy, or science; to investigate unexplained laws of nature and the powers latent in man. It had in 1908 14 sections, each presided over by a general secretary. These are in America, Great Britain, India, Scandinavia, Holland, France, Italy, Germany, Australia, New Zealand, Netherlands, Cuba, Hungary and Finland. In 1908 the membership of the American section was about 2,600. The officers were as follows: President, Mrs. Annie Besant, Adyar, India; General Secretary of the American Section, Weller Van Hook, 103 State street, Chicago. Several other bodies in the United States use the same name, but are not affiliated.

THOMAS, CHARLES MITCHELL. An American naval officer, died at Monterey, Cal., on July 3, 1908. He was born in Philadelphia on October 1, 1846, and graduated at the United States Naval Academy in 1865. He became ensign in 1866, master in 1868, lieutenant in 1869, lieutenant-commander in 1880, commander in 1890, captain in 1899, and rear admiral in 1905. He commanded the second squadron of the battleship fleet in their cruise from Hampton Roads to San Francisco in 1907-1908, and for a short time succeeded Admiral Evans in command of the fleet, when the latter's health failed. He retired from active service while the fleet was on the Pacific coast.

THUMANN, PAUL. A German painter and illustrator, died in February, 1908. He was born at Tschacksdorf, in Brandenburg, Germany, on October 5, 1834. He studied painting at the academies in Berlin, Dresden, and Weimar. In 1866 he traveled on the continent and through England. Soon after, he was appointed professor at the Weimar Academy, and later, instructor at Dresden. In 1875 he was called to a professorship at the Berlin Academy, which he held until 1887. In 1892, after some years spent in Italy, he opened a studio in Berlin. His paintings dealt largely with historical or military subjects. Many of them depicted incidents of the war of 1870. His popular "Soldier's Farewell" belongs to this class. Others of his works are the "Five Scenes from the Life of Luther," in the Wartburg, near Eisenach, and the famous "Return of Arminius from the Battle in the Teutoburg Forest," in the Minden Gymnasium. He was no less famous as an illustrator; among numerous books for which he made drawings are: Chamisso's *Frauen Liebe und Leben*; Goethe's *Dichtung und Wahrheit*; and Tennyson's *Enoch Arden*.

TIBET. A country in Central Asia, a dependency of China. Estimates of the area vary from 463,000 to 814,000 square miles; of population, from 2,250,000 to 6,500,000. The lamas number about 500,000. Lhasa, the capital, has from 15,000 to 20,000 inhabitants. Barley, wheat, buckwheat, pulse, and vegetables are grown. Peaches and grapes grow in some favored localities. The domestic animals are buffaloes, camels, pigs, yak, and sheep. A large number of the people are pastoral nomads. Gold,

borax, and salt deposits are worked on a small scale. The imports of Tibet from British India in 1907-8 amounted to \$483,235; the exports of Tibet to India, \$753,594. The principal imports are cotton goods; the principal exports, wool (2,665,820 pounds) and curios. In 1907 the first consignment of rugs made in Tibet for an American carpet house reached Calcutta. The larger part of the Tibetan-Indian trade passes through Yatung and the Chumbi Valley. Gyangtse and Gartok were opened to trade by the treaty of 1904. The last installment of the indemnity of 2,500,000 rupees (rupee=32.44 cents) to the British was paid in 1908, and the British force was withdrawn from the Chumbi Valley. A new trade agreement between Great Britain and Tibet, to last for a term of ten years, was signed in April, 1908. Provision is made for the maintenance of posts and telegraphs; police regulations at the marts and along the routes are to be under the control of the Chinese government, and British subjects are to be under the jurisdiction of their consula. See **EXPLORATION.**

By the treaty of Sept. 7, 1904, after the Younghusband expedition reached Lhasa, Tibet agreed to pay Great Britain an indemnity of £166,000 in three instalments. These payments having been made, the British troops were withdrawn from the Chumbi Valley in 1908. In April, 1908, a new trade agreement between Tibet and Great Britain was signed, to remain in force ten years, subject to renewal for another ten years. It modifies existing regulations and agrees that British subjects shall be regarded as ex-territorial so long as China so regards them. For an account of the Dalai Lama's visit to Peking, see **CHINA**, paragraphs on *History*; and for Dr. Sven Hedin's explorations in Tibet, see **EXPLORATION.**

TICKS. See **ENTOMOLOGY.**

TIMOR. An island of the Malay Archipelago, the largest of the Lesser Sunda group. Area, 12,593 square miles; population, 400,000. The western, or Dutch, portion forms part of the Residency of Timor Archipelago, having, with other islands, an area of 17,782 square miles and 308,600 inhabitants in 1905. The larger, eastern, or Portuguese portion constitutes a colony having, together with the neighboring isle of Cambing, an area of 7,330 square miles and 200,000 inhabitants. Portuguese Timor produces coffee, cacao, nutmegs, sandalwood, and petroleum. Dilli, the port and capital, is built on a marsh. The natives are pagans, and under the immediate rule of their chiefs. The governor in 1908 was Capt. E. Marques. The military force consists of 323 men (212 natives). In 1908 the Lamakito and Batugedo tribes revolted and defeated the force sent against them.

TIN. As the United States does not figure as a producer of this metal, which is obtained mainly from Malay, the Dutch East Indies, and Bolivia, interest centres in the imports, which usually involve from 40 to 50 per cent. of the world's production. In 1907 the importation of tin into the United States amounted to 82,549,000 pounds, while in 1908 this amount fell to approximately 75,000,000 pounds. The price also decreased, the average for 1908 in New York being about 29½ cents as compared with 38.16 cents for 1907. This was due to continued overproduction. According to the *Engineering and*

Mining Journal, the world's supplies of tin for the 12 months ended Nov. 30 were as follows:

TIN SUPPLIES, 12 MONTHS ENDING NOV. 30, 1908.

(In Tons of 2,240 Pounds.)

	1907	1908
English production	4,700	4,400
Chinese exports	4,000	4,000
Straits to Europe and America	52,520	59,137
Straits to India and China	3,140	3,265
Australia to Europe and America	6,612	5,869
Australia, consumption	250	250
Banka and Billiton	13,483	13,765
Bolivia	15,500	16,250
Miscellaneous	250	250
Total	100,465	107,186

APPROXIMATE TIN DELIVERIES 12 MONTHS END- ED NOV. 30, 1908.

(In Tons of 2,240 Pounds.)

	1907	1908
United States	35,000	31,700
Great Britain	24,150	29,400
Other Europe	28,840	28,050
China and India	3,140	3,265
Other countries	4,500	4,250
Total	95,630	96,665

WORLD'S PRODUCTION OF TIN, 1906, 1907.

(In Tons of 2,240 Pounds.)

Mineral Industry, Vol. XVI.

	1906	1907
Cornwall	4,522	4,700
Straits	58,438	55,660
Banka and Billiton	11,250	13,944
Australia	6,888	6,612
China	4,000	4,000
Bolivia	16,394	17,729
Miscellaneous	400	500
Total	101,892	102,695

The United States contains a few deposits of tin, whose output up to 1908 has been inconsiderable. In 1907 there was reported by the United States Geological Survey a very small production of metallic tin in South Dakota, which, with concentrates from Alaska, from South Dakota, and from North Carolina-South Carolina deposits, was valued at \$33,285, against \$35,600 in 1906.

TOBACCO. The conditions surrounding the tobacco growers of the country during recent years were gradually improving, and while the production of 1908 had often been exceeded, and was reported as being under the 5-year average, the total value of the crop was estimated at about 15 per cent. above that average. According to government reports, the acreage in 1908 was 875,425 acres and the total production, 718,061,380 pounds, the average yield being 820.2 pounds per acre. The yield of cigar leaf alone was 141,842,000 pounds. In 1907 the acreage was less by 54,200 acres and the production by about 20,000,000 pounds, as compared with 1908. Kentucky was again the leading State, although the acreage, as compared with 1907, was reduced by 30,200 acres and the total crop by about 45,000,000 pounds. In 1908 Kentucky produced 195,600,000 pounds, being followed by North Carolina with 134,000,000 pounds, Virginia with 114,100,000 pounds, and Tennessee with 52,000,000 pounds. The acreage in these States was 240,000, 200,000, 140,000, and 65,000 acres, respectively. The total value of the tobacco crop in 1908 was \$74,130,000 and in 1907 \$71,411,000. The world's production in 1906 was 2,201,191,000 pounds, of which North America furnished 754,790,000 pounds, South America 103,717,000 pounds, Europe 623,543,000

pounds, Asia 696,169,000 pounds, Africa 20,847,000 pounds, and Oceania 2,125,000 pounds. In Asia, British India produced 450,000,000 pounds, and in Europe, Austria-Hungary yielded 187,253,000 pounds and Russia 162,020,000 pounds, these being the leading countries.

The crop of 1908 in the Dutch East Indian colonies was reported as very good, the Sumatra crop, which is exported to this country, being estimated at 274,764 bales. The Cuban exports in 1908 amounted to 332,327 bales of leaf, 188,846,784 cigars, and 163,310,336 cigarettes. The largest purchaser of leaf, as reported in *Tobacco Leaf*, was the United States with 236,849 bales, Germany being next with 51,590 bales. England bought 70,677,528 Cuban cigars, the United States 47,669,742, Germany 24,183,131, and France 11,418,782. There was an increase in all exports except cigarettes and all tobacco-using countries increased their imports from Cuba as compared with 1907, except Austria, Canada, and the United States. Turkish cigarette tobacco is now imported by this country to the value of about \$4,000,000, as against \$25,000 in 1896. The cheapest Turkish tobacco is sold in New York at \$1 per pound. According to the internal revenue returns there were consumed in this country during the year ending June 30, 1908, over 6,860,000,000 cigars, 380,000,000 pounds of manufactured tobacco, 805,000,000 little cigars, about 3,625,000,000 cigarettes, and over 21,000,000 pounds of snuff. The American Consul at Nanking states that in China cigarette smoking, introduced only recently, is becoming very general among all classes. In the United States remarkable conditions existed in some of the tobacco growing sections of Kentucky and Tennessee (q. v.), where the so-called "night riders" endeavored to dictate prices to the tobacco trust by means of threats and violence to trust officials and sympathizers, as well as to neutral tobacco growers. Property was destroyed and murder committed.

TOGOLAND. A German protectorate in West Africa. Area, about 33,700 square miles; population, 1,000,000. In 1907 there were 288 whites (273 Germans). Lomo is the chief port and capital. Government schools have over 300 pupils; mission schools, 7,000 pupils. The forests contain oil-palms, rubber trees, and dyewoods. The natives cultivate maize, yams, tapioca, ginger, and bananas. On European plantations there are cultivated cotton, cacao, coffee, kola, and oil-palms. The export of cotton in 1907-8 was 1,674 bales of 250 kilos each (1 kilo = 2.15 pounds). In 1907 the imports amounted to 6,699,684 marks, mainly cotton goods, iron goods, spirits, tobacco, and timber; the exports, 5,915,609 marks, mainly rubber, palm-nuts, and palm-oil, maize, animals, cotton, and ivory. Over one-half the trade is with Germany. At the end of 1907 there were 102 miles of railway and 250 miles of telegraph. The budget for 1908-9 balanced at 6,218,560 marks. The Governor in 1908 was Count von Zech-Neuhofen.

In his address on the affairs of the colonies on Feb. 18, Herr Dernburg, imperial secretary of state for the colonies, declared the economic conditions of Togoland satisfactory and that the railway from Lomo to Palme on Jan. 27, 1907, was now paying, and that it had been leased on terms which would give the colony a surplus in a few years.

TONGA ISLANDS, or **FRIENDLY ISLANDS**. A British protectorate in the Western Pacific. Area, 390 square miles; population (1906), 21,240. In 1905 there were 240 whites. In 1907 imports amounted to £97,820; exports, £134,104. The latter were principally copra, £119,717, and fruits, £10,002. The trade is mostly with Australia and New Zealand. The native government is an hereditary constitutional monarchy. The British Agent and Consul—in 1908, Hamilton Hunter—is under the High Commissioner for the Western Pacific. The revenue and expenditure in 1907 were £34,912 and £33,540, respectively.

TONGKING, or **TONQUIN**. A French protectorate in Indo-China. Area, 46,000 square miles; population, estimated in 1906 at 5,888,589, including 33,000 Chinese and 4,000 Europeans. There are 400,000 Roman Catholics. Hanoi, the chief town, with over 103,000 inhabitants, is the capital of French Indo-China (q. v.). It contains a school of medicine for natives. The principal product is rice, other crops being sugar-cane, cotton, coffee, and tobacco. The number of cattle is reported to be about 1,000,000. About 1,100,000 pounds of raw silk are produced annually, three-fifths of this being consumed in native manufactures. A sericultural station has been established at Phu-lang-thuong. At Hanoi and Haiphong there are large cotton spinning mills. A new rubber tree, of which high hopes are entertained, has been discovered in the mountainous region of the north. The only mining enterprise of importance in Indo-China is carried on at Hongay, on the coast, north of Haiphong, where about 300,000 tons of anthracite coal are mined annually. The imports and exports are included in those of French Indo-China. There is a French Superior Resident at Hanoi. The local budget for 1908 balanced at 5,893,000 francs.

TORPEDO. The introduction of the turbine, the superheater, and more accurate gyroscopic gears, has greatly increased the offensive power of torpedoes and torpedo craft; and has necessitated increasing the effective range of torpedo defense guns to over 4,000 yards. In the British Navy Engineer-Lieutenant S. A. Harcastle, R. N., invented a 21-inch torpedo with an effective range of 7,000 yards and a speed of 31 knots, carrying the same charge as at present, 200 pounds. The latest model building at the Royal Gun Factory in 1908 had a maximum speed of 42 knots for 1,000 yards; and only 21 knots for the maximum range of 5,000 yards. No torpedo in use in the British Navy in 1908 had a diameter greater than 18 inches.

A new torpedo range, 7,000 yards, was to be established on the shores of Loch Long; and a torpedo factory, at Battery Park in the town of Greenock. As far as possible the personnel of the Woolwich Torpedo Factory was to be transferred to Greenock.

The Bliss-Leavitt torpedo supplied in 1908 to the newest American ships was of 21 inches' diameter, and carried a charge of 300 pounds. The maximum range was given as 4,000 yards at 27 knots. The latest German type in 1908 had a diameter of 19.5 inches, a charge of 220 pounds, and a range of 4,000 yards at 20 knots.

TOWER, CHARLEMAGNE. An American diplomatist, ambassador to Germany from 1902 until his resignation, which took effect on June 1, 1908. He was born in Philadelphia on April 17, 1848, and graduated at Harvard in 1872. After studying in Europe, he was admitted to the bar in 1878. He removed to Duluth, Minn., in 1882, and became president of the Duluth and Iron Range Railroad. He was appointed minister to Austria-Hungary in 1897, and in 1899 became ambassador to Russia. He is a man of large wealth, and as the representative of the United States in his various posts was known for his brilliant entertainment. See **GERMANY**, and **HILL**, DAVID JAYNE.

TRADE UNIONS. Probably the most notable trade-union events in the United States in 1908 were the denial of the right to carry on a boycott (q. v.) by the use of union labels and "unfair lists," on the ground that a union thus became a combination in restraint of trade; the fight over the proper use of the injunction (q. v.) in labor disputes; and the political activities of the American Federation of Labor (q. v.). Of almost equal interest was the decision in January by the Supreme Court of the case of *Adair vs. U. S.*, holding that portion of the Erdman Act of 1898 which forbids the discharge by an interstate railway of an employee because he belongs to a trade union, to be unconstitutional. O. B. Coppage was discharged for such reason by the Louisville and Nashville Railroad. The United States Circuit Court for Eastern Kentucky gave Coppage damages for such discharge, holding it to have been illegal under the Erdman Act. The Supreme Court, to which the case was then appealed, held that an employer has the right to discharge an employee because he belongs to a union, even as an employee may quit work because of the employment of non-union men. Any legislation disturbing such equality of rights was held by the court to be an arbitrary interference with the freedom of contract. Moreover, that provision of the law in question was held to be an undue stretching of the powers of Congress to regulate commerce. For Congress to forbid the discharge of an employee on any ground is to regulate the relations of employer to employee, and this power once admitted could be stretched to provide that interstate carriers should employ only union, or only non-union, men. Organized labor resented this decision. It claimed that this virtually legalized the black-list for employers, whereas the boycott had just been declared illegal for employees.

Another decision of interest was that of the Court of Appeals of Texas in the case of the *St. Louis Southwestern Railway Company of Texas vs. Thompson*. The latter, a railway engineer and a member of the Brotherhood of Locomotive Engineers, frequently served as an expert witness in damage suits against the above railway. The general manager of the road, it was alleged, practically forced Thompson out of the Brotherhood, thus causing him the loss of a valuable insurance policy. Upon the fourth and final decision of the case the court relieved the union of financial responsibility, but compelled the railway company to pay \$500 actual and \$2,000 penalty damages.

The United Mine Workers of America at their 19th annual convention at Indianapolis in Feb-

ruary accepted the resignation of John Mitchell, who for nine years and seven months had served as President. Mr. T. L. Lewis was chosen his successor by an almost unanimous vote. The most significant utterances of the convention dealt with the observance of trade agreements with employers. Secretary Wm. D. Haywood of the Western Federation of Miners protested against such contracts as reducing the opportunity to strike, especially to strike sympathetically. President Mitchell condemned this criticism in most vigorous terms. He declared the violation of contracts was injurious to the welfare of the men, and was destructive of one of the fundamental and most beneficial principles of the union. He showed that wages to-day are double those of ten years ago when miners could strike at any time. Moreover, he said, if unions retain the right of the sympathetic strike they must grant to the mine operators the right to use the sympathetic lockout.

The International Printing Pressmen and Assistants' Union inaugurated a campaign for an eight-hour day in November, 1907. They have been successful in almost every city in the United States. A few firms here and there refused to grant the demand, and in November, 1908, small numbers of members on strike were reported. All these were paid strike benefits by the Union, and this was done without depleting the \$75,000 strike fund. The total expenditures in the prosecution of this campaign were about \$900,000 during the first year. At the same time about 2,200 new members were added.

The International Typographical Union started its old-age pension scheme in 1908. This was adopted at the 1907 convention, and ratified by a referendum vote in December following. Members 60 years of age, who have been in the Union 20 years, and who earn less than \$4 per week, are entitled to a pension of \$4 per week. In November, 1908, there were 476 pensioners being carried by the Union at an annual cost of \$100,000.

Undoubtedly one of the causes of the absence of serious strikes in the United States in 1908, a year of industrial depression, was the willingness of both employers and unions to maintain trade agreements. This was well illustrated at Fall River, Massachusetts, where the sliding scale agreement led to lower wages without disruption of the contract by the unions. (See INDUSTRIAL ARBITRATION.) To this same end contributed the stand taken at the very beginning of the year by the American Federation of Labor, that everywhere wage-reductions should be resisted by the full strength of organized labor.

GERMANY. At the close of 1907, the general federation of trade unions in Germany numbered 1,880,000, an increase of about 90 per cent. in four years. The German unions have in the last year or two entered more and more extensively into the policy of granting benefits for injury, sickness, or unemployment. In 1906 the total expenditures by federated unions for various benefits amounted to 36,963,413 marks, or 21.9 marks per member. The contributions per member averaged 24.6 marks. The expenditures have greatly increased, not only because of the new benefits, but also because of a more aggressive policy. Most of the trade unions are now accumulating considerable funds for

use in strikes and lockouts. The total of such funds in 1906 was 25,312,000 marks, or three times the amount in 1901. The unions have found the policy advantageous, for strikes are less necessary to enforce their demands and lockouts are less frequent when the employer knows that a large emergency fund is on hand.

FRANCE. Among various tendencies now manifest among French trade unions is the more complete development of the idea of confederation and consolidation. The French unions are largely imbued with socialistic doctrines, and differences on theoretical points have heretofore prevented united action. This state of affairs is being gradually overcome by the recently organized General Federation of Labor. This organization showed an unusually aggressive spirit during the past year. Among its fundamental principles are the general strike to be engaged in by all workmen as well as public employees, and opposition to international warfare. During the year the federation officials made an attempt, only partially successful, to organize the postmen and to spread the new ideas among the army. See STRIKES AND LOCK-OUTS.

The Nineteenth Congress of the International Miners' Federation met at Paris June 8th. British, French, German, Austrian, and Belgian delegations were present. Resolutions were passed demanding the extension of the eight-hour day to surface workers and the reduction of the legal day to six hours in case of fire-damp and very high temperatures. The use of female labor in mines was condemned. The German delegation proposed rigorous restrictions on the employment of children under sixteen in mining, but the French and English delegates refrained from voting on the proposal. Other resolutions endorsed international arbitration as a substitute for war and favored the nationalization of mines.

ENGLAND. The strength of trade unionism in English politics continues to grow. In the by-elections of 1908, there were many combinations between the Laborites and the Socialists. In districts having labor candidates this combination polled 323,000 out of a total of 859,000 votes. Trade unionists constitute by far the majority of the Labor Party and furnish most of its funds. At the meeting of the Party at Hull, Jan. 22nd-23rd, there were represented 276 organizations with a total membership of 1,072,431. A proposed amendment to the constitution of the Labor Party "to organize and maintain a parliamentary labor party with its own whips and policy" was almost unanimously rejected. A resolution, however, favoring "the overthrow of the present system of capitalism and the institution of a system of public ownership and control of all the means of life" was adopted by delegates representing 514,000 votes for and 469,000 against. It was generally believed by commentators that this socialistic declaration, being carried by only a small majority, need not be viewed as a commitment of the Labor Party to the whole scheme involved in Socialism. Following the adoption of this resolution, the Congress, with only one dissenting vote, adopted a declaration repudiating the attacks made upon it on the ground that Socialism is antagonistic to the family organization and to religion. Among the achievements claimed by the Labor Party in the legislation

of 1908 were the Old Age Pensions Act (q. v.); a law enabling educational authorities to provide food at public expenditure for destitute school children; and a law establishing an eight-hour day for miners. Its present platform includes the fixing of a minimum legal wage in certain sweated industries, and a measure granting the right to work.

A judicial decision, considered to be the most important in trade-union circles since the famous Taff-Vale decision, was handed down the first week of December by the London Court of Appeal in the case of *Osborne vs. the Amalgamated Society of Railway Servants*. The court declared that a trade union was not competent to provide for representation in Parliament by means of a compulsory levy on its members. The case is to be taken to the House of Lords. The immediate effect of the decision is to compel the unions to institute a system of voluntary contributions for the support of their representatives in the House of Commons. Should this decision of the London court be reversed by the Lords, trade unions will have conferred upon them powers not enjoyed by other corporations or quasi-corporations, and their political activities would be greatly increased.

At the annual Trade-Union Congress, Nottingham, Sept. 10th-12th, resolutions were passed expressing alarm at the increasing number of deaths and accidents from motor traffic, favoring a system of compulsory state insurance, condemning the Unemployed Workmen's Act, and favoring "a national system of education, under full popular control, free and secular, from the primary school to the University." A resolution favoring the principles of arbitration and conciliation, both voluntary and compulsory, was rejected. The Irish Trade-Union Congress in June resolved to follow the policy of the English unions in seeking political power by independent representation in Parliament. This will be done through direct affiliation with the British Labor Party. Similarly the Miners' Federation at its annual convention at Chester, Oct. 8th-9th, decided to make formal application for admission to the Labor Party, on condition that present Miners' members in Parliament be not required to sign the constitution of the Labor Party. This convention also passed resolutions favoring old-age pensions, and the nationalization of mines, railways, and all means of production.

AUSTRALIA. In addition to the great interest in the matter of industrial arbitration and conciliation (q. v.), trade unions in Australia were greatly agitated by a decision of the Federal High Court on the legal status of the union label on Aug. 4th. Such labels have only recently come into vogue among the Australian unions. No state has yet legislated on them, and the recent Federal Trademarks Act authorizing the registration of union labels as trademarks had not been subject to court review preceding this decision. The Attorney-General of New South Wales at the instance of several brewing companies challenged the constitutionality of the law. He gained his point. The court held, by a division of 3 to 2, that a registrable trademark must signify ownership and must be affixed by the owner of the goods, and not by the persons making them. The court further held that the plaintiffs were compelled by the law to tell whether they did or did not

use union labor exclusively, a matter of much importance to many consumers; hence the law was judged to be an impediment to the plaintiffs in carrying on their business. As a result of this decision the unions demand a change in the constitution so as to remove from the court its power to declare an act of Parliament unconstitutional. Another decision of great interest to Australian workingmen was that in which the Federal High Court, two judges dissenting, declared unconstitutional that portion of the Tariff Act which regulated the rate of import duty by a consideration of the rate of wages paid in the industries affected by the imports. The object of this portion of the Act was to compel employers to pay fair and reasonable wages in order to secure tariff protection. The Court held that for Parliament to enforce wage conditions by means of tariff duties was *ultra vires*, that is, beyond the powers granted by the Constitution. As a result of this decision the Premier proposed in October an amendment to the Constitution empowering the Commonwealth Parliament to secure fair conditions for workmen in protected industries.

In recent years a movement for the organization of women workers has made great progress. The number of unions affiliated with the general federations and having women members increased from 21 in 1900 to 36 in January, 1908, while the number of women members increased from 22,844 to 136,929.

The membership in trade unions in 1908 decreased in the United States, but made decided gains in France. A fairly reliable estimate of trade-unionists in principal countries in 1908 was as follows: North America, 3,000,000; Great Britain, 2,250,000; Germany, 2,500,000; France, 1,500,000; Austria, 700,000; Russia, 250,000; Spain, 250,000; Italy, 225,000; Belgium, 150,000; Holland, 75,000; Australasia, 200,000; Scandinavia, 200,000. See **INDUSTRIAL ARBITRATION AND CONCILIATION; WOMEN IN INDUSTRY; LABOR, AMERICAN FEDERATION OF; INJUNCTION**, especial judicial decisions noted; and **BOYCOTT**.

TRANSMISSION OF ELECTRICAL POWER. The development of hydro-electric power schemes received a decided check during 1908, due to the long period of financial depression. A number of smaller plants were completed, but the promotion of new enterprises met with little favor. Construction work on the large power plant on the Susquehanna River, which was rapidly nearing completion in 1907, was practically suspended, and the same was true of several other large enterprises. The most interesting plant put into operation in 1908 was that at Grand Rapids, Michigan. The transmission lines of this plant were operated at 110,000 volts, this being the first instance of the commercial use of a pressure above 70,000 volts, which was the record for 1907. The use of this high pressure was made possible by the employment of the suspension type of insulation. *i. e.*, several insulator units suspended in series from the cross arms and the wire suspended in turn from the last unit. This type of insulator was put on the market in 1907, and during that and the following year was extensively used. Another type of high voltage insulator, which received considerable attention in 1908, although it was still in the experimental stage, was built

up of three corrugated porcelain tubes mounted on a steel base and forming a pyramidal structure, the tubes coming together at the apex. The advantage of this insulator was that it avoided the use of a pin, which in an ordinary petticoat insulator extended up through the insulator to within a few inches of the live conductor, and is separated from the conductor only by a comparatively thin layer of porcelain; the failure of the ordinary insulator is almost invariably due to puncturing this layer of porcelain. In the new structural form of insulator the live conductor could be separated from all grounded metal parts by a distance of from two to three feet. On account of the extremely low water that prevailed in the rivers of the eastern part of the United States during the summer and autumn months of 1908 a number of water power plants were unable to supply their usual demands for power. In most instances the deficit in water power was made up by the use of steam, either from the company's own reserve plant or by the consumer himself. This unusually dry season was a striking object lesson in the necessity of considering with the greatest care the minimum flow conditions when designing hydro-electric plants. The construction work on the 80,000 kilowatt plant of the Great Western Electric Company of California was so far completed during the year as to enable the Company to begin the delivery of power. The development on the Pianbanha River, Brazil, was also partially completed; this plant will ultimately generate 50,000 horsepower, and will be one of the largest in South America. Work was also begun during the year on an extensive hydro-electric development at Simla, India.

TRANSVAAL, THE. A British colony in South Africa. Area, 111,196 square miles; population (1907), 1,349,450. In 1904 there were 300,225 whites. Pretoria, the capital, had 36,700 inhabitants (21,161 white) in 1904; Johannesburg, 158,580 (83,902 white). The number of children in schools supervised by the Government was 48,265 in 1907, of whom 35,791 were white, 1,268 "colored," and 11,206 native.

PRODUCTION. Stock raising is more important than agriculture. Cereals, meat, and other foodstuffs have to be imported. Only about 50,000 acres are in cultivation. The ranches average 6,000 acres in extent. A syndicate has spent £3,500 in starting cotton cultivation in the Zoutpansberg district, where some 10,000 acres will be under cotton in 1909. Mining is the most important occupation. The gold output in 1907 was 6,450,740 ounces (£27,400,992). The dividends paid by the Rand companies in 1907 amounted to 27.4 per cent. of their nominal issue capital and 70 per cent. of the profits for the year. In 1908 the gold output was £20,957,610. The diamond output in 1907 was 2,062,855 carats, valued at £2,268,075. The coal output in 1907 was 2,883,423 tons, valued at £773,649. The output of other minerals in the year ending June 30, 1907, was: Silver, 690,732 ounces, valued at £92,874; chemicals, etc., £27,884; stone, brick, salt, etc., £202,803; lime, £57,516; copper ore, 784 tons, £36,703; tin ore, 625 tons, £27,184; lead, 1,400 tons, £18,584; asbestos, 88 tons, £3,655; magnesite, 1,040 tons, £4,106; antimony, 17 tons, £127. In June, 1907,

gold mining employed 180,563 persons, of whom 17,165 were whites, 51,517 Chinese, and 111,881 natives and other colored. Coal mining employed at the same time 10,914 persons, of whom 504 were whites, and 10,410 natives and others. In accordance with the letters patent, no more permits are granted for the importation of Chinese coolies, and those in the colony have to be shipped back upon the expiration of their term of indenture. The first batch left in June, 1907. The number of Chinese and Kafirs employed at the mines and mills on Jan. 1st of each year for the last three years was as follows:

	1907	1908	1909
Chinese	53,828	31,840	12,283
Kafirs	83,567	118,204	148,722
Total	137,395	150,044	161,005

Thus the Chinese are decreasing and the Kafirs increasing. Most of the natives now coming to the mines are from north of the Zambesi, and require some time to be accustomed to the work and the climate of the Transvaal.

COMMERCE AND COMMUNICATIONS. The Transvaal is included in the South African Customs Union (see BRITISH SOUTH AFRICA). The imports and exports in 1907 amounted to £15,754,944 and £31,232,521, respectively. The imports are mainly food and drink, textiles, chemicals, and machinery. The exports are mainly gold, diamonds, living animals, wool, angora hair, tobacco, and coal. Over two-fifths of the imports are from Great Britain, and about one-fifth from South Africa. The railways of the Transvaal and Orange River Colony (q. v.) are administered conjointly by the Inter-colonial Council. At the end of 1907 there were nearly 2,400 miles of railway in both colonies. The addition to Government lines, both new and acquired, during 1907 was 392 miles. All railways in both colonies are now the property of their respective governments, except the line from Bethlehem to Kroonstad, 88 1-2 miles, which is worked by the Natal Government, and 28 1-4 miles of private line. At the end of 1907 there were 163 miles in construction. All new construction was then suspended, owing to financial considerations. There are about 2,500 miles of telegraph line.

GOVERNMENT, ETC. Responsible government was established on Dec. 6, 1906. The members of the Legislative Assembly are elected by universal white suffrage. The Governor, who is also High Commissioner for South Africa, in 1908 was the Earl of Selborne. The Premier was General Botha. The colonial military forces consist of 5,000 active volunteers, 5,000 reserve volunteers, and 4,000 cadets. The revenue in 1907-8 was £4,670,218; the expenditure, £4,120,451; the public debt, £28,550,000.

HISTORY.

THE STATUS OF ASIATICS. After the Imperial government's assent to the Immigration Restriction and Asiatic Registration Acts in December, 1907, a meeting of protest was held by the Indians at Johannesburg (Jan. 1, 1908), and a resolution unanimously passed declaring that the government had failed in its duty of pro-

tecting the weak. The Registration Act imposed the penalty of deportation on Asiatics not registering according to its terms, which included identification by means of finger-prints, a requirement offensive to educated Indians as associated with the identification of criminals. Asiatics without registration certificates were ordered to leave the country within periods ranging from 4 to 14 days, and recusants were arrested. The case for the Indians was stated thus in letters and articles by their supporters in the press: It was charged that since the annexation the treatment of Indians had grown worse, although the Boer severity toward aliens was one of the grievances urged by the British, before the war, against the Kruger government. Registration had been required by the law of 1885 as a condition of residence, but when question arose of its validity, the Indians taking the advice of Lord Milner in 1903 registered anew. It was then understood that they would not be required to register again. The present act retained the requirements of the law of 1885 and imposed new ones. It required registration not only of newcomers, but of those who had already twice registered, and it gave the government the right to deport recusants. On the other hand, Mr. Smuts, Colonial Secretary, declared on Jan. 4 at Pretoria that the Registration Act protected Indians who had a legal right to residence. He said that the 5,000 Asiatics who had left the country on account of the act had no right to residence, and that of the 9,500 who remained but refused to register a large proportion, were influenced in their course by agitation. The rights of Asiatics who had come to the Transvaal before the war were admitted. There was no feeling against Asiatics already settled in the Transvaal, but a determination to prevent further immigration and keep the Transvaal a white man's country. False permits had been issued and new immigrants came in with permits issued to those already there. Hence the strict provisions as to registration. The question turned on the treatment of residents—the strictness as to the false permits, the suspicion that owing to lax administration many appeared to be residents who really were not. The Indians complained that though they had twice registered, they were now required to do so again under conditions associated with the criminal class. Mr. Ghandi, the leader of the Indians, offered a compromise. He declared the bad features of the law were the element of compulsion and the requirement of identification by finger-prints.

Finally, on Jan. 30, the government agreed to a compromise, whereby the Asiatics were to register voluntarily within three months and the law was to be modified in some of its provisions including that requiring finger-print identification for which was substituted the signatures of educated persons, property owners, etc. While the prevention of further immigration was to be enforced, the government agreed to recognize the vested interests of Asiatics already settled in the country. A number of "passive resisters" who had been arrested were now released. A misunderstanding as to the government's promises subsequently arose, the Indians insisting on more radical changes than the government was willing to make. In May Mr. Ghandi asked that his voluntary ap-

plication be returned. The amendment of the Registration law was introduced on Aug. 21. It was designed to meet the objections originally raised. It fixed Oct. 1 to Nov. 30 as the registration period and was to go into effect on Sept. 21. It entitled Asiatics to registration after they have proved to the registrar three years' previous residence; it required Asiatics to give their name and address with their signature and also to produce a certificate, or, failing a certificate, a finger and thumb impression. It also imposed a different educational test on Indians from that imposed on Europeans. These changes did not meet the demands of the Indians and the trouble continued. On Oct. 14, Mr. Ghandi was sentenced to two months' imprisonment at hard labor for refusing to conform to the law and a number of other Indians were sentenced to imprisonment.

REGULATION OF THE MINES. The Mining Industry Commission issued its report on Mar. 10. It recommended among other things the taxation of unworked claims, the eight hour day for miners, the passage of law requiring one white miner for every machine drill, and the non-importation of labor from the Portuguese territories. The draft of the Gold bill was published on Mar. 30. Its main purpose was to simplify and reconcile the various mining laws. It permitted prospecting on Crown lands but not on private lands except with consent of the owner, defined the methods for establishing and working claims, and the measures to be taken if insufficient work was done, empowered the government to establish a School of Mines, and contained provision against the illicit gold trade. It was passed on July 15.

Parliament opened on June 15. Lord Selborne announced that the proposed loan of £5,000,000 had been deferred and that the government would raise money by short-dated treasury bills. The government was planning extensive public works and the establishment of a Land Settlement Board. He reported that 31,157 Chinese had been repatriated, that the supply of native labor was sufficient, and that the mining industry was on a sound basis. See **BRITISH SOUTH AFRICA.**

TRINGANU. See **KELANTAN AND TRINGANU.**

TRINIDAD. A British West India island, lying opposite the delta of the Orinoco and forming together with Tobago a colony. Area: Trinidad, 1,754 square miles; Tobago, 114. Population (1906): Trinidad, 306,830; Tobago, 20,570, mostly negroes and East Indian coolies. Port of Spain, the capital, had 56,100 inhabitants in 1901. The eighteen sugar plantations of Trinidad employed in 1907 5,922 East Indians and 5,619 West Indians, and produced 50,564 tons of sugar. The principal products and exports in 1907 were: Sugar, 46,270 tons; molasses, 524,926 tons; rum, 185,483 gallons; bitters, 34,866 gallons; cacao, 49,730,576 pounds; cotton (1907-08), 11,300 pounds; coconuts, 14,868,000; rubber, 4,444 pounds; bananas, 56,437 bunches and crates; oranges, 2,991 packages; asphalt from Pitch Lake, 141,006 tons; manjak, 1,806 tons. Manjak mining is increasing; the output in 1907-08 was 2,114 tons. The petroleum fields are being developed, and a geological survey of them has been made. The fruit industry is also extending. In 1907-08 the imports amounted to

£3,374,824; the exports, £3,907,503. The leading imports are flour, provisions, fish, textiles, hardware, and timber. The distribution of the trade in 1907-08 among the principal countries of origin and destination is shown in the following:

From and to	Imports	Exports
Great Britain.....	£1,050,768	\$ 821,321
British Colonies.....	314,463	313,936
United States.....	817,067	1,015,777
Venezuela.....	909,383	374,327
Other foreign countries..	283,153	1,382,142

There was an increase over 1906-07 of £781,957 in the exports to foreign countries, due mainly to the increased export of cacao to France, which rose from £269,539 to £1,025,748. There are over 80 miles of railway and 177 miles of telegraph line. The revenue in 1907-08 was £871,201; the expenditure, £781,038; the public debt, £1,075,053.

TROPICAL MEDICINE. The opening up of vast areas of tropical and subtropical lands to exploitation and settlement by Europeans and Americans gave an impetus to the study of the diseases incident to these climates, and a large amount of brilliant and useful work was done in the opening years of the twentieth century toward making life safe for white men, as in the case of the Panama Canal Zone. Dr. J. M. Anders, President of the American Society of Tropical Medicine, at a meeting of this society in March, 1908, gave a résumé of the year's progress in this department of medical science. While no epochal discoveries were made, there had been a considerable net gain in our knowledge. Continued study of the plague confirmed the theory that the rat flea was the principal disseminator of the disease. The Indian rat flea *Pulex cheopis*, it was proved, would bite man; this had been a subject of controversy. It is a flea common in many parts of the world, and identical with *Pulex pallidus* of Australia and *Pulex philippensis* of Manila. It was also proved that the *Ceratophyllus fasciatus* and *Pulex irritans* were capable of infecting animals. Ashburn and Craig completed their studies of *Filaria philippensis*, discovered by them in 1906, and showed that complete development of this blood parasite took place in the mosquito, thus adding another communicable disease likely to be carried by this insect. Its rôle in the propagation of malaria and yellow fever is too well known to need comment. Hewlett and de Korte conducted researches into the causation of beri-beri and believe that this disease is due to a protozoon infection. This is contrary to the belief of many authorities that the disease is caused by faulty alimentation. These authors found in the urine of beri-beri patients three varieties of refraction cells, believed to be degenerate cells or protozoa, and they believe the urine to be the eliminating and infectious mediums. They found a disease in monkeys similar to beri-beri in its manifestations and symptoms. Ashburn and Wright in the Philippine Islands examined the stools of 100 healthy soldiers with no history or symptoms of dysentery. They found *entamoeba coli* present in 72 cases. This is interesting for comparison with the recently discovered fact that healthy individuals may harbor typhoid bacilli in the intestinal tract and disseminate the disease without knowing it (see TYPHOID FEVER), and adds an-

other difficulty to prophylaxis. Anemia in Porto Rico was the subject of investigation by the Permanent Commission for the Suppression of Uncinariasis. It was estimated that 90 per cent. of the population suffer from this scourge. The Commission treated 89,233 patients and report that complete cure resulted in 25.71 per cent.; practical cure in 17.88 per cent.; under treatment 40 per cent., and deaths 0.21 per cent. Several journals in 1908 were devoted to the subject of tropical medicine, viz., *The Philippine Journal of Science*, *Journal of Tropical Medicine and Hygiene*, *Annals of Tropical Medicine and Parasitology* (published by the Liverpool School of Tropical Medicine), and the *United States Naval Medicine Bulletin*. The two latter were new. See PLAGUE; INSECTS AND THE PROPAGATION OF DISEASE; MALARIA; SLEEPING SICKNESS.

TRUST COMPANIES. See LOAN AND TRUST COMPANIES.

TRUSTS. The discussion of the growth and control of industrial combinations continued with unabated interest and volume during 1908. A great deal of attention was given to the merits and demerits of the Sherman Anti-Trust law, the advisability of its retention, and means for its amendment. The Bureau of Corporations continued its investigation of leading trusts and its Commissioner summarized the advantages of the first five years of its activity. The prosecutions undertaken as a conspicuous feature of the Roosevelt administration were continued.

SHERMAN ACT. The number of those demanding an amendment to the anti-trust law greatly increased in 1908. on Feb. 12th Senator Beveridge declared that the most urgent legislation needed by honest business was a law legalizing capitalistic combinations for honest purposes. Commissioner of Corporations Herbert Knox Smith stated in his 1908 report, "Corporate combination seems to be not only an economic necessity but also largely an accomplished fact. The mere prohibition of commercial power, simply because such power is the result of corporate combination, by no means meets the real evil. It is not the existence of industrial power, but rather its misuse, that is the real problem." President Roosevelt repeatedly urged that beneficial combinations be legalized, on the ground that combination is necessary and inevitable under modern industrial conditions. He declared it to be "profoundly immoral to keep on the statute books a law, nominally in the interest of public morality, that really puts a premium upon public immorality by undertaking to forbid honest men from doing what must be done under modern business conditions."

At the twelfth annual meeting of the American Academy of Political and Social Science at Philadelphia, April 10th and 11th, the subject of the relation of the Government to industry was considered from many points of view. (See *The Annals of the Academy* for July.) The most frequent criticism upon the Sherman Act has been that it prohibits all combinations, both good and bad; that it does not aim merely at unreasonable restraints of trade, but reasonable ones as well. From this it is argued that the law not only has checked the economic development of the country, but also has retarded the growth of the better features of corporations, such as profit-sharing, by raising doubts as to their legality and permanence.

Very great stimulus was given to the demand for a change in the Sherman Act by the decision of the Supreme Court holding a trade-union boycott a conspiracy in restraint of trade as defined in that statute (see *BOYCOTT and LABOR, AMERICAN FEDERATION OF*).

In April a bill, known as the Warner Bill, to amend the trust law, drawn by President Seth Low and others of the National Civic Federation, in consultation with President Roosevelt, members of the Cabinet, and prominent labor leaders, was introduced into Congress. The essential features of this bill included many of the recommendations of the Commissioner of Corporations and others experienced in the administration of the trust law, as well as in the evils of trust management. Its main features may be presented therefore, though the bill was not acted on. The bill presented a plan for the registration of corporations and labor unions with the Commissioner of Corporations. The former were required to state their purposes, contracts, and activities, while the latter were to file simply copies of their charters and the names and addresses of officers. The Commissioner was authorized to cancel the registration of any concern at his discretion. Contracts made subsequent to registration were required to be filed with the Commissioner; if such were approved as not "unreasonable" restraint of trade, no prosecution could be based on them. The bill also provided for pooling agreements by railways, under the general supervision of the Interstate Commerce Commission. Labor unions were guaranteed the right to strike and to combine with each other or to contract with employers, in order peacefully to obtain satisfactory working conditions. This last provision was not intended, however, to legalize the boycott. The fundamental aims of the bill were to secure a moderate degree of publicity in exchange for legalizing any reasonable combination, and to make possible a discrimination of trade. It was severely criticised for fiction between reasonable and unreasonable replacing so much discretionary power in the Commissioner of Corporations. It was also opposed on the ground that to attempt to distinguish reasonable and unreasonable restraints would emasculate the law by making it indefinite and uncertain and hence nugatory as a remedial measure.

Both leading political parties recommended changes in the anti-trust law. The Republicans declared in favor of greater publicity of corporate affairs and closer governmental supervision. The Democrats recommended a law preventing a duplication of directors among competing corporations, a plan for licensing interstate concerns, such license to forbid the control of more than one-half of any commodity used in the United States, and a law forbidding local competition. See *PRESIDENTIAL CAMPAIGN*.

BUREAU OF CORPORATIONS. During 1908 the Bureau of Corporations carried forward its investigations into the organization and business methods of the combinations in the powder, steel, tobacco, lumber, and petroleum industries and into the character of the International Harvester Company and the International Paper Company. Commenting on the results of the first five years' experience of the Bureau, Secretary of Commerce and Labor Oscar L. Straus stated that the Bureau's work had shown that "the greatest advance toward corporate reform must come through some general system of publicity." He

declared that to this end "a Federal constructive system for the positive supervision of interstate corporations" is badly needed. He said that the mere publication by the Bureau of improper business methods was sufficient in many cases to lead to their abandonment. He favored some plan of dealing with the trusts which should lead to their coöperation with the Government as against the present plan of court prosecutions which forces the trusts into opposition for self-defense. His plan as presented provided for a system of regular reports from all interstate corporations to the Bureau, and free access by the Bureau to the records of such corporations; for the publication of important facts as to corporate operations with a view of creating and maintaining an intelligent public opinion. The changed attitude of opinion toward combinations was shown in the report of Commissioner of Corporations Herbert Knox Smith, the keynote of whose opinion was that not destruction but regulation should be the official policy toward trusts.

PROSECUTIONS. The one successful suit prosecuted by Attorney-General Bonaparte under the Sherman Act, was that against the American Tobacco Company, known as the Tobacco Trust. This suit was begun on July 10, 1907, in the United States Circuit Court for the Southern District of New York, following an extensive inquiry into the business of the defendants by Henry W. Taft of New York City. The case was argued in May, 1908. A number of subsidiary companies were included in the complaint, among them the American Cigar Company, the American Stogie Company, and the McAndrews & Forbes Company. By the final decree of the Court, Dec. 15th, all of these companies were declared to constitute a combination in restraint of trade and were enjoined from engaging in interstate commerce in leaf-tobacco or its products until reasonable competition is restored among them. Furthermore these companies and the R. J. Reynolds Company, the Pierre Lorillard Company, the Blackwell's Durham Tobacco Company, and the Conley Foil Company were forbidden to vote any of the stock held by them in these or any of sixty subsidiary companies. The government's complaint against the Imperial Tobacco Company of Great Britain and Ireland, the British-American Tobacco Company, and the United Cigar Stores Company was dismissed, as was also the government's application for receiverships "to wind up" the business of the defendant companies. Both the government and the companies appealed to the Supreme Court; meanwhile a stay in the execution of the injunction order was granted. The case was notable for the intense bitterness of feeling shown between officials of the trust and independent companies, and for the volumes of testimony taken from witnesses all over the country.

Two suits were advanced against the so-called Anthracite Coal Trust. One of these begun in June, 1907, against the Reading Company and other anthracite coal-carrying roads as a combination in violation of the Sherman Act, was still pending at the close of the year. The other, begun in May, 1908, was based on the complaint that the roads were violating the commodities clause of the railroad rate law of June, 1906. This clause forbade any interstate common carrier to transport any commodity, other than timber, produced or mined by it, except articles necessary to the conduct of its business as a

carrier. On Sept. 10th the United States Circuit Court of the Third Circuit, in an opinion written by Justice George Gray, declared this clause unconstitutional. The Court held the clause to be arbitrary and despotic in nature, confiscatory and retroactive, and a plain violation of the fifth amendment to the Constitution which forbids deprivation of property without due legal process. As this case developed it became apparent that the clause in question though aimed at the anthracite coal railroads would affect also other producers, as the steel and oil industries. Another serious feature in the case was the fact that the state of industrial depression would have made it extremely difficult to dispose of the large holdings forbidden by the law. On Oct. 6th the government was granted an appeal to the Supreme Court.

The American Sugar Refining Company, popularly known as the Sugar Trust, was the defendant in several important suits of the year. The government brought seven suits for the recovery of customs duties, aggregating \$3,624,121, for the fraudulent weighing of sugar imported during the past six years. Evidence was being taken before Commissioner Shields in New York City in these suits at the close of the year. Special Agent Richard Parr, of the Treasury Department, testified that the company used fraudulent scales at its Brooklyn piers for the weighing of raw sugar, thus reducing the import duty. Parr stated that in the course of his investigations of the unloading and weighing of raw sugar, he discovered steel springs so inserted in the scale platforms as to interfere with proper weighing. The amount of such interference varied, but in seventeen sets of scales such devices were found, all giving results favorable to the company; without such devices the scales weighed true. Another suit against the trust was that brought by the Pennsylvania Sugar Refining Company under that section of the anti-trust law allowing three-fold damages for injury to business, due to the activities of an illegal combination. The plaintiff sought \$30,000,000 damages. Adolf Segal, of Philadelphia, held a controlling interest in the plaintiff corporation. He was induced, so the complaint alleged, to accept a loan of \$1,250,000 from the defendant on condition that the Pennsylvania company should not operate so long as the loan was outstanding, and on condition that his voting power in the company be turned over to the American Company. It was alleged that the latter took advantage of these conditions to prevent the plaintiff company, which was a new concern with expensively equipped plants, from starting up in business, thus being guilty of conspiracy to restrict competition and interstate commerce. This suit was dismissed by the United States Circuit Court in September, on the ground that the plaintiff had not begun business and shown capacity to make profits. But the Circuit Court of Appeals on Dec. 17th decreed that the Pennsylvania company had grounds for a suit.

In May Attorney-General Bonaparte began suit against the New York, New Haven, and Hartford Railway under the Sherman Act. The complaint charged a combination in restraint of trade and a monopoly within the meaning of the law. It alleged that this company had gradually extended its control over railway and steamship companies and trolley lines; that it now controls 500 out of 600 miles of trolley lines in Connecticut, 400 out of 500 in Rhode Island, and 600 in

all in Massachusetts; and that it owns 35 per cent. of the stock of the Boston and Maine Railroad, thus acquiring virtual control, since the remaining shares are widely scattered. The case had not advanced by the close of the year.

There were many other cases attracting considerable interest. The effort to compel the Consolidated Gas Company of New York City to obey the eighty-cent gas law passed by the Legislature in 1906 had not terminated at the end of the year. The case had reached the Supreme Court of the United States. The report of the Public Service Commission of the First District showed that this company supplied 70 per cent. of the gas and 76 per cent. of the electricity used in Greater New York in 1907. This company and its subsidiaries supplied twenty-five billion cubic feet of gas during that year. In the suit begun in 1907 against E. I. du Pont de Nemours & Company and others as a combination in restraint of trade in the manufacture and sale of gunpowder and other high explosives, a special examiner to take testimony was appointed in Sept., 1908. At the very close of the year the so-called Beef Trust was under grand jury investigation at Chicago with reference to violations of the anti-rebate law and the maintenance of tacit agreements for the fixing of prices and the division of territory in violation of the Sherman Act.

A number of the States carried on vigorous prosecutions against various combinations during the year. The States of Missouri and Texas were most zealous in such activities, but Kansas, Tennessee, Minnesota, Ohio, and others were also alert. Much of this enthusiasm for "trust-busting" on the part of State officials was due to the fact that such a policy was good politics. In Texas the Waters-Pierce Oil Company was fined \$1,623,900, and placed in the hands of a Federal receiver; the Harvester Trust was fined \$35,000 and ousted from the State; express companies were fined to the amount of \$40,000; the American Book Company was also fined; and numerous suits were pending. The Farmers' Union, however, which was clearly outlawed by the anti-trust statute, was regarded with increasing favor. See STANDARD OIL.

TSI-AN. See TZE-HSI.

TUBERCULIN. This substance was extensively used during 1908 principally as a diagnostic agent, but to some extent for its curative value in tuberculosis. Its value in both roles was the subject of much inquiry and debate. As a curative medicine it is injected hypodermatically in minute doses, which are gradually increased according to its effects upon the patient. As a diagnostic agent tuberculin was used in three ways: 1. By injection, as above. 2. By vaccination; the Von Piquet method. The skin is rubbed with alcohol, then slightly scarified or punctured with a sharp needle, and a drop of tuberculin applied. When tuberculosis is present, in a few hours a reddened area appears around the seat of vaccination, reaching its maximum intensity in from 12 to 24 hours, a papule form, which with the hyperæmia may last several days or even weeks. 3. By dropping tuberculin into the eye—Calmette's reaction. A freshly prepared one-per-cent. solution of Koch's old tuberculin is used. A drop of this is placed in the corner of the eye, which when the reaction is positive, becomes the seat of an inflammation

of varying degrees of severity and duration. The time of the appearance of the reaction is held to have considerable prognostic value. A marked reaction, appearing promptly, indicates a favorable prognosis, and the more severe the reaction the better the outlook for recovery. On the other hand a quickly occurring mild reaction, or failure to react, is looked upon as unfavorable. A delayed mild reaction indicates a healed or latent lesion. These principles, according to Wolff-Eisner, apply to both ocular and skin reactions. This author's theory of the mechanism of tuberculin reactions is as follows: Individuals with tuberculosis foci have at all times in their blood "bacteriolysins" for the tubercle bacillus. All tuberculins contain fragments of tubercle bacilli, and when these come into contact with the patient's bacteriolysins, endotoxins are set free from these fragments of bacilli which cause the phenomena of the reaction. Schrupf cited two cases in which instillation of tuberculin into the eye induced a severe, long continued inflammation which left permanent opacity of the cornea in one case. He cites further 23 authors who have published reports of disturbances following tuberculin instillation, ranging from intense conjunctivitis to keratitis, with or without involvement of the iris. Another disadvantage of the ocular reaction was that the eye was liable to become influenced again if a course of tuberculin treatment was instituted. These and many other reports in the United States, notably those of Rosenau and Anderson of the United States Marine Hospital Service, indicate that the substance must be used with extreme care. See TUBERCULOSIS.

TUBERCULOSIS. The most important single event in connection with this subject was the meeting of the International Tuberculosis Congress at Washington, D. C., from Sept. 21st to Oct. 12th, 1908. The congress was attended by nearly every well known authority on tuberculosis of this country and Europe. The presence of Koch, Arloing, Theobald Smith, Calmette, Trudeau, Rasenil, Fibiger, Adams, Sims, Woodhead, Eastwood, Courmont, and others stamped it as one of the most notable gatherings ever held. The meetings were characterized by a tone of optimism as to the complete control and ultimate eradication of the disease, although it is now known that every human being who has reached the age of thirty has or has had tuberculous infection in some part of the body, and presents definite traces of the disease in his tissues. The congress discussed every phase of the problem—ventilation, factory inspection, tenement house reforms, the prevention of expectoration, sanitation, and the segregation of the tuberculous patient. The question of infection of human beings through tuberculosis milk was perhaps the most important before the congress, and on this no definite agreement was reached. Dr. Koch stated his belief that eleven-twelfths of all tuberculosis and practically all pulmonary infection in the human race comes from human sources. He reiterated his statement made at the London Congress in 1901 that the bovine type of tuberculosis is different from the human type. (This decision was first made by Theobald Smith, of Washington, in 1898.) Koch added that infection from tuberculosis cattle was comparatively rare; that a herd of tuberculous cattle was less dangerous to the community than a badly ventilated tenement house in a large

city. These views were diametrically opposed to those of the majority of the membership of the congress, and this lack of harmony was regarded as unfortunate because of its possible effect on the campaign against infected dairies and in view of the fact, that the transmissibility of bovine tuberculosis to man is settled from a scientific standpoint. The exhibits at the congress constituted the greatest anti-tuberculosis exhibition ever assembled, and attracted wide attention. England, Germany, Sweden, France and other European countries, and many of the United States were represented, as well as practically all the large sanitariums in this country. At the conclusion of the congress the exhibition was brought to New York City, where at the Museum of Natural History many thousands flocked to view it. A series of public meetings was held in connection with the exhibition and every effort put forth to make the occasion one of popular education. Dr. Darlington, Health Commissioner of New York City, stated in opening the exhibition that since the Health Department began its crusade against spitting, and has removed advanced cases of tuberculosis to hospitals, furnished sputum cups, and enforced disinfection of rooms vacated by tuberculosis patients, the death rate from this disease among children under fifteen had fallen from 7.1 to 2.6 per ten thousand of the population. Mayor McClellan announced that there were at present about 3,500 beds available for tuberculous patients in New York City, and buildings were planned or were being constructed that would accommodate 1,500 more. Eventually there would be room for 6,000 patients.

Tuberculosis in Ireland was reported on the increase of late years and attracted serious attention in 1908. The death rate in that country is alarmingly high, 15.8 of all deaths being due to consumption. A peculiar feature is that the victims are for the most part adult wage-earners, and not, as in other parts of the United Kingdom young children. The cause for this is found in the poor sanitary organization in Ireland, most of the sanitary work being in the hands of the poor law medical officers, who are paid meager salaries and are not expected to look after public sanitation. In Sweden, on the other hand, vigorous measures have been taken against the spread of tuberculosis since 1896, which may serve as a model for other countries. The two main features of the campaign were: First, the establishment of an adequate number of sanatoria in all parts of the country. To this work King Oscar II. gave the jubilee fund, amounting to \$583,000. Second, the organization of the National Anti-tuberculosis Society, whose efforts are directed to popular education. This society has a membership of 22,000. Lectures on tuberculosis are given. A museum was established in Stockholm, and pamphlets, newspapers, and other literature distributed. With these and other measures in vogue the mortality is steadily diminishing. In Germany similar efforts on a scale commensurate with the size of the country have been made. In addition forest schools and sanatoria have been established where delicate children and adults can spend the day in the open air, returning to their urban homes at night. In twenty years the mortality in Prussia alone had been reduced by 13.88 per thousand of population. See VETERINARY SCIENCE.

A TUBERCULOSIS EXHIBIT
HOW THE NATIONAL ASSOCIATION FOR THE STUDY AND PREVENTION OF TUBERCULOSIS
HAS AROUSED WIDE POPULAR INTEREST IN THIS DISEASE

lation, about 1,830,000. The natives are estimated at 1,700,000, mostly Arabs and Kabyles, with 80,000 Jews. On Dec. 16th, 1906, there were 128,895 Europeans (34,610 French, 81,156 Italians, 10,330 Maltese). Tunis, the capital, has about 200,000 inhabitants, including 61,000 Europeans. The natives, excepting the Jews, are nearly all Mohammedans, with about 400 adherents of the Greek Church. The Europeans are mostly Catholics. The Mohammedans have some 1,400 primary schools, some of them assisted by the government, and a university in the Great Mosque at Tunis. The Mohammedan religious, charitable, and educational institutions are maintained from the income derived from "Habus" lands. The French schools include a lyceum for boys and another for girls, two colleges, a technical school, about 150 government primary schools, and a number of private schools. Congregational teaching is prohibited as regards French children. The Italian government and Italian societies maintain schools in the larger towns.

PRODUCTION. In 1907 the production of wheat was estimated at 6,000,000 bushels; oats, 2,000,000 bushels; wine, 7,920,000 gallons; olive oil, 27,000 metric tons. Other products are barley, dates, almonds, pistachios, oranges, lemons, alfa grass, and cork. The number of olive trees in 1907 was estimated at 11,222,225. The most important olive district is the country about Sfax. About 200,000 acres have been sold by the government with the obligation on the part of the purchaser to plant olive trees. Two-thirds of the oil comes from very primitive native mills. There are about 150 European mills, but owing to the lack of fresh water in many districts, only 50 are worked by steam. The largest mill, in the city of Tunis, has an annual capacity of 6,600,000 pounds of oil, and the soap factory attached to it turns out 1,800,000 pounds of soap. Date palms number about 1,350,000. The cork forests of the north-west cover 202,600 acres. On Dec. 31st, 1902, there were 200,200 cattle, 20,240 horses, 108,094 asses and mules, 146,899 camels, 719,610 sheep, 509,428 goats, and 7,825 swine. The development of mineral wealth within recent years has been very notable. Large deposits of phosphates exist near Gafsa and the surrounding region, and at Ain Moulares, to the west of Gafsa. About one-eighth of the world's supply of phosphates is now derived from Tunis, the deposits of which are said to be practically inexhaustible. In 1906 there were exported 751,421 tons of phosphates, 1,041 tons of copper ore, and 21,602 tons of lead ore. Iron has been found near Kef, and 5 iron mines are being worked. Manganese has been found in large quantities in the south, between Gafsa and Gabes. Prospecting is going on in the desert country in the extreme south, which, in the opinion of geologists, is rich in mineral-bearing formations. The fisheries, worked by Italians, Maltese, and Greeks, yield sardines, anchovies, allaches, tunny fish, etc. The total value of the catch in 1906 was 3,182,000 francs, exclusive of sponges.

COMMERCE AND COMMUNICATIONS. The imports and exports in 1907 were valued at 102,860,000 and 103,361,000 francs, respectively, against 89,349,000 and 80,595,000 in 1906. The principal imports are flour, hardware, machinery, and textiles. The principal exports in 1906 were: Phosphates, 18,758,000 francs; bar-

ley, 9,360,000; olive oil, 6,972,000; wheat, 3,654,000; alfa, 3,071,000; animals, 2,946,000; sponges, 2,129,000; tanning bark, 1,345,000; wine, 565,000. The distribution of the trade in 1907 among the principal countries of origin and destination, was as follows, in francs:

From and to	Imports	Exports
France	62,032,000	61,240,000
Algeria	6,870,000	5,524,000
Great Britain	9,781,000	15,296,000
Germany	2,054,000	2,424,000
Belgium	2,291,000	3,692,000
Italy	6,108,000	17,346,000
United States	3,101,000	118,000

In 1906 the ports were entered by 13,416 ships of 3,566,661 tons (1,683,813 French). The railways in 1907 had a length of 718 miles; telegraph lines in 1906, 2,392 miles.

GOVERNMENT AND FINANCE. The nominal ruler is the Bey. The present Bey is Sidi Mohammed En Nasser, who succeeded his cousin May 12th, 1908. The real ruler is the French Resident-General, who is also Minister of Foreign Affairs, and acts under the direction of the French Foreign Office. He is assisted by 7 French and 2 native ministers. The French garrison numbers over 20,000, the cost being borne by France. The Bey's native bodyguard is about 600 strong. The country is divided into 13 civil districts, 2 military districts, and 1 military post. The district governors (contrôleurs) are French; the subordinate officials (Kuids and Sheiks) are natives. Justice between Europeans, and between Europeans and natives is administered by French courts; cases between natives are tried by native courts. The budget for 1907 estimated the revenue at 39,342,133, and the expenditure at 67,662,952 francs. At the end of 1906 the Tunisian debt amounted to 232,181,500 francs. In 1907 the government was authorized to contract a loan of 75,000,000 francs for roads, railways, and colonization.

TUNNELS. The two-track subway tunnel of the city of Philadelphia was opened for inspection on July 30th, 1908, and the first train was run through on Aug. 3d. This formed an addition to the elevated railway, which extends on Market street, from the Schuylkill River to 69th street, continuing the line from the river, and extending it eastward, down Market street, and around the City Hall to the Delaware River, a distance of two miles. It was also proposed in connection with the Philadelphia transportation problem to build two single tubes beneath the Delaware River for street railway passenger traffic only, to connect Market street, Philadelphia, and Third street, Camden. A street railway tunnel, one mile long, was opened in 1908 in Genoa, Italy, which connects that city with the town of Rivarolo, and thus reduces the distance by 1 1-3 miles; the road going through the hill, rather than around it. Twenty-five men were killed in an accident in the Loetschberg Tunnel in the Alps on July 25th, 1908, while at work in the north heading, due to a section of rock being forced out of place without warning. Two hundred thousand dollars was appropriated for the electrification of the tunnel between Spieze and Frutigen, at the northern approach, the current for which will be obtained from the Kander & Hagneck hydraulic plant at Spieze. The maxi-

mum grade will be 2.7 per cent., and passenger trains of 250 tons will be run at 25 miles per hour, while freight trains of 300 tons will be run at 18 miles per hour. During the month of April, 1908, the rate of progress approached within 5 per cent. of that established in the Simplon Tunnel, where the record of 685 1-2 feet advance on a single heading, in one month, was made. In the Loetschberg Tunnel 656 feet were driven in the north heading.

HUDSON TUNNELS. The Hudson Company's upper line under the Hudson River, between Jersey City and Manhattan, was opened the first time for traffic on Feb. 1st, 1908. The Cortlandt street tunnels of the same company were nearing completion and promised to be opened during the year 1909.

SANTA BARBARA TUNNEL. This California city was undertaking to build a tunnel through the mountains, which, when complete, will be 19,560 feet long, and has for its purpose the delivery of water to the city. In 1908 \$200,000 had been spent on the project, and it was at the end of the year about half finished. During the driving of the heading an underground flow of water was tapped which gives 75 miners' inches, and it is expected that a further flow will be developed in the progress of the work, enough to supply the entire city. It is proposed to use the tunnel for a pipe line leading from the storage reservoir on the Santa Ynez River.

THE DETROIT RIVER TUNNEL, which consists of two twin tubes, was partially damaged by fire, in which two men lost their lives, on Sept. 15th, 1908, in the Canadian approach. The fire, starting in the air lock of the west-bound tunnel about 1,400 feet back of the shield, did little damage, and was easily extinguished. The land approaches at the end of the year required considerable work upon them before they would be completed, but five of the ten river sections had been put in place.

THE WASHINGTON STREET TUNNEL in Boston, Mass., was opened for official inspection on Nov. 23d, 1908. It is about two miles long, and in general passes through the business section of the city, parallel to the Tremont street subway. Its use will be devoted chiefly to the elevated railway trains, so that the Tremont street subway may be used for surface cars, as originally planned. Great difficulty was involved in its construction, due to the narrowness of the streets and the tall buildings adjacent.

THE BROOKLYN EXTENSION of the New York subway tunnel was opened from Borough Hall to Atlantic avenue, Brooklyn, on May 1st, this addition thus completing the original contract No. 2, which was known as the Brooklyn extension. The entire contract included about one mile of tunnel in Manhattan, south of the City Hall to the Battery, with a double track loop at the latter place, and extended thence east, by means of two tubes, to Joralemon street, Brooklyn, which it follows to Fulton street, and thence out Flatbush avenue to Atlantic avenue. It was proposed in Brooklyn to construct another subway tunnel, to extend from the east end of the Manhattan Bridge, under Fourth avenue to 43rd street, and the contracts for its execution were let on May 22d, 1908. It will be about 3 1-2 miles long, and will cost about \$16,000,000, of which one million will be

used for pipe galleries. A second rapid transit subway tunnel has been authorized in Manhattan, which will extend up Broadway and Lexington avenue to the Bronx, and have two branches to run east and west in the latter borough.

RICKEN TUNNEL. The progress of 531 feet in the Ricken Tunnel during the month of March, 1908, was entirely in the south heading and not only exceeded any other month's advance for that undertaking, but established a new record which is 70 feet in excess of former values where land drilling had been employed. As a matter of comparison, it may be stated that the world's record, made in the Simplon, where machine drills were used, was 685 1/4 feet. Located in the Canton St. Gallen in northeast Switzerland, the line, which is 28,221 feet long between portals, extends from Uznach to Wattwil, and appreciably shortens the north-south routes in eastern Switzerland. Except for a short length of masonry lining that must be placed, the tunnel was finished, but considerable trouble was occasioned by the presence of fire damp, which at one stage of the operations stopped the progress for months at a time. To dispose of the gas, 4-inch vent tubes were built into the masonry lining, but the gas, becoming ignited and striking back through the vents, began to burn behind the masonry. No damage had resulted from it as yet, and it was expected that the flow would soon cease, but soft ground has caused some annoyance, having crowded in the sides for a distance of 200 feet and in some places to the extent of 12 inches.

THE ROTHERHITHE TUNNEL under the River Thames at London, was formally opened by the Prince of Wales on June 13th, 1908. It is 6,883 feet in length, of which 3,698 feet is cast iron tunnel, and connects Ratcliff with Rotherhithe.

PENNSYLVANIA TUNNELS. The four tubes of the Pennsylvania Railroad tunnels under the East River, between Manhattan and Long Island City, at the end of the year were reaching a condition where soon they could be concreted for their entire length, cleaned out, and put in readiness to be turned over to the Pennsylvania Railroad for the laying of roadbed, track and installation of electrical equipment for operation. Rapid progress was made upon the tunnels under Manhattan also. Two of the tunnel outlets in the railroad yard in Long Island City were finished, together with a concreted roadbed running for several hundred feet from the entrance to the tunnels. The work of building the connecting links between the completed East River tubes and the terminal points in the railroad yards was also nearing completion. In addition to the viaducts built over the yard for the purpose of carrying street traffic, the work of raising Jackson avenue at the Sunnyside section of Long Island City several feet above the present grade was about half completed. This change of grade will not only facilitate the approach to the plaza of the Queensboro Bridge, but it will also enable the Pennsylvania Railroad to fill in a wide stretch of swamp ground, otherwise without value, except at great cost for drainage.

In the Bergen Hill tunnels the headings of the south tube were joined April 11th, while those in the north tube were holed May 7th. These two tunnels were the last part of the New York and Long Island extension of the Pennsylvania Railroad, and by their completion passage from the west portal at Bergen Hill to the Long Island yard was made possible.

The terminal station work was almost finished, the excavation and the retaining wall around the site being complete and most of the masonry and steel work in place. To this point already \$70,000,000 had been spent by the Pennsylvania Railroad on this New York extension, but it was estimated that \$20,000,000 more would be required before it was completed sometime in 1910. Throughout the terminal zone, which extends from Newark to Long Island City, a third rail direct current system will be used for operating trains. A protected third rail is to carry a current of 600 volts, while the transmission from a central power station in Long Island City to substations, will be made with 11,000 volt, 25 cycle, 3 phase alternating current.

TURFAN. A ruined city of Chinese Turkestan, especially noteworthy for its archaeological remains and for the literary and linguistic fragments discovered there. In 1908 four fragments from this site had been made accessible, and the work of decipherment is constantly being carried on by the Prussian Academy of Sciences. Of the new material by far the most valuable is the discovery of an Indo-Scythic language. (See **INDO-SCYTHIC LANGUAGE**.) Next in interest stands the finding of fragments of a Sanskrit recension of the *Dhammapada*, a Buddhistic work hitherto known only in Pali and in Tibetan and Chinese translations. These Sanskrit fragments are sufficient to show that the Tibetan (and Chinese) version was made from a Sanskrit, not a Pali, original. Of less general interest is the discovery of fragments of a Sanskrit grammar on paper, dating from the ninth or tenth century A. D., of which additional parts have been edited during 1908. Our scanty knowledge of the original sources of Manichæanism, as well as of Uiguric (old Turkish) is advanced by a brief fragment of twenty-six lines, giving a version, apparently, of the temptation of the Iranian reformer Zoroaster by the Evil One (recorded in the Avesta *Vendidad*, xix.), combined with the Iranian tradition which located the demoniac Azhi Dahaka at Babylon (cf. the Avestan *Yasht* v., 29). Consult *Sitzungsberichte der königlich preussischen Akademie der Wissenschaften* for 1908.

TURKEY. An empire in Europe, Asia, and Africa. Exclusive of Bulgaria (q. v.), which declared itself independent in 1908; Bosnia and Herzegovina (q. v.), administered by Austria since 1878 and annexed in 1908; and the nominal or autonomous dependencies of Crete (q. v.), Cyprus (q. v.), Egypt (q. v.), and Samos (q. v.), the area and population are estimated as follows:

	Area sq. miles	Popula- tion
In Europe	65,367	6,130,000
In Asia:		
Asia Minor	193,600	9,080,000
Armenia and Kurdistan	72,000	2,471,000
Syria	114,600	2,880,000
Mesopotamia	131,700	1,308,000
Arabia	170,300	1,060,000
Total in Asia	682,200	16,898,000
In Africa:		
Tripoli and Benghazi	405,800	1,000,000
Total	1,153,300	24,028,000

The principal cities, with their estimated populations, are: Constantinople, 943,000 (in-

cluding suburbs in Asia, 1,106,000); Salonica, 105,000; Adrianople, 81,000; Smyrna, 201,000; Bagdad, 145,000; Damascus, 140,000; Aleppo, 127,000; Beirut, 119,000; Brussa, 76,000; Kaisarieh, 72,000; Kербela, 65,000; Mosul, 61,000; Mecca, 60,000; Homs, 60,000; Sanaa, 58,000; Urfa, 55,000; Marach, 52,000; Jerusalem, 80,000; Medina, 48,000.

RELIGION. In European Turkey the Mohammedans and Christians are about equally divided, and there are numerous Jews. In the Aegean islands nine-tenths of the population are Christians. In Asiatic Turkey the Mohammedans constitute a majority. In Asia Minor the number of Christians is estimated to be 1,548,500; in Armenia, 646,000; in the vilayet of Aleppo, 183,000; in the vilayet of Beirut, 166,500; in the Lebanon, 319,300. There are very few Christians in Mesopotamia, Arabia, and Turkish Africa.

EDUCATION. The ministry of public instruction is divided into four departments, which supervise, respectively, the primary schools, the higher primary schools, preparatory schools, and the schools of the non-Mussulman and foreign communities. The grand council of the ministry of public instruction controls the school revenues and expenditures and supervises the law school, the college of fine arts, colleges for civil servants, commercial colleges, meteorological observatories, the imperial museum, and the deaf and dumb institution. The school revenues are derived from one-half of 1 per cent. of the tithes on agricultural produce, 5 per cent. of the real estate taxes, and one-third of the poor rate. Instruction in government schools is free, whether for Turkish or foreign subjects. The schools of the non-Mussulman and foreign communities are supported by their respective communities.

In each province there is a council for the supervision of the schools, under the presidency of a Mussulman and a non-Mussulman. In every village there is, by law, a primary school at which attendance is obligatory for all Mussulmans. Boys have to go to school from 6 to 11 years of age, and girls from 7 to 11. The course of instruction covers four years and includes reading, writing, history, the Turkish language, elementary geography, and religious instruction, according to the creed of the pupil. In towns of over 500 houses there is a higher primary school with a four years' course and instruction in Turkish grammar, letter writing, Persian and Arabic grammar, arithmetic, book-keeping, geometry, history, drawing, and one of the languages spoken in the district. In all towns having over 1,000 houses there are preparatory colleges, or high schools, with a two years' course and instruction in Turkish literature, French, rhetoric, political economy, geography, general history, natural history, arithmetic, algebra, geometry, surveying, physics, chemistry, and drawing.

The above account of the Turkish system of education is based on a report by United States Consul Ernest L. Harris of Smyrna, published in 1908. According to other reports, the instruction in the primary schools is by the Mussulman clergy, and of little value. The total number of the various schools in the empire is over 36,000, with 1,330,000 pupils. At Constantinople there are a government school of medicine, an imperial art school, the Greek Na-

tional School, with 400 students, and a Greek theological seminary, with 80 students. At Damascus there is a government medical school. The American college in Beirut, with collegiate, commercial, and medical courses, and 850 students (200 Mohammedans), is the greatest educational centre in Asiatic Turkey. At Smyrna there was established a commercial school about the year 1906. In 1908 it was reported that the course of instruction was to be extended, so as to include the Turkish, English, French, and German languages, besides the subjects usually taught in European commercial schools.

FORESTS. About 21,000,000 acres are under forest, of which 3,500,000 are in European Turkey. In Asia Minor the magnificent natural forests were largely cut down for firewood and to provide pasture for the numerous goats. The latter, in their turn, destroyed the new shoots which might have replaced the trees that were cut down. Nevertheless, the forests which cover the interior mountain ranges are still counted among the chief natural riches of the country. In the vilayet of Smyrna, there are 1,600,000 acres of valuable woodland, consisting chiefly of larch, oak, boxwood, pine, cypress and cedar. In the vilayet of Adana, there are 1,200,000 acres of forest, and there is a considerable export of timber, tar, and resin through the port of Mersina. In the vilayet of Trebizond about 1,400,000 acres of forest land have been destroyed by the charcoal makers, much to the detriment of the soil and climate. In the vilayet of Konieh 944,000 acres are under forest.

AGRICULTURE, ETC. The production of wheat in Asiatic Turkey in 1907 was estimated at 35,000,000 bushels. The olive crop of 1908 was far below the average, and the output of olive oil was estimated at 50,000 tons—about 70,000 to 75,000 tons below the average. The principal centres of olive production are Asia Minor and the islands of the archipelago. In 1906-07 there were 100,640 wine growers and 118,615 distillers; the output of wine was 61,956,407 kilos, and of spirits, 8,609,457 kilos. In the same year the beer production was 6,466,342 kilos. The production of tobacco in 1907 was about 2,000,000 kilos. The manufacture of tobacco and cigarettes is a monopoly of the Regie, which pays \$3,300,000 annually to the Ottoman public debt administration. The company pays further, after deducting 8 per cent. on the share capital and 5 per cent. on founders' shares, 30 per cent. of the remaining net profits to the government and 35 per cent. to the public debt administration, distributing the remaining 35 per cent. among the shareholders. The total sales of the Regie in 1905-06 amounted to 16,605,000 pounds of tobacco. The Regie must purchase all the inferior tobacco, which is consumed in the country. As regards the best qualities of tobacco, the Regie comes in competition with the exporters. In 1905-06 the Regie purchased in the great centres of high-grade tobacco—Cavalla, Salonica, Samsoun, Smyrna and Xanthi—5,885,000 pounds of tobacco, and the exporters 46,118,600 pounds. Retailers receive a 5 per cent. commission from the Regie. Nargileh tobacco is controlled by a similar but smaller company. The present concession to the Regie comes to an end by 1914. The production of opium varies considerably from year to year; in 1904 it was 11,000 cases, in 1906, 7,250; in 1907, 2,375, and was estimated for 1908 at 4,800 cases. Nearly the entire pro-

duction is exported. The production of attar of roses in 1907 was 2,100 kilos. Cotton is grown throughout Asia Minor, especially in Anatolia, in the southwest, and Cilicia, in the southeast. The greatest production is in the districts of Aidin, Kassaba and Adana. These districts are well watered, and the climate and soil are suited to cotton cultivation. Goats are very numerous in Asia Minor, particularly in the interior highlands. The Angora goat abounds chiefly in Anatolia. The total number of goats is about 3,000,000, and the value of the mohair annually produced is placed at nearly \$4,000,000. The weaving industry of Angora, formerly very extensive, has succumbed to European factory competition. But shawls and robes are still produced in large quantities and are much prized on account of their durability and originality of design. The export of eggs, through Smyrna, increased from 1,132,125 eggs in the three years 1900-1902 to 24,322,374 in 1907.

IRRIGATION PLANS. On Nov. 24th, 1907, an agreement was signed between the Anatolian Railway Company, a German corporation, and the Turkish government, for irrigating about 132,500 acres in the plain of Konieh, in the centre of Asia Minor. The utilization of the waters of Lake Bey Chehir, covering 24,300 acres, forms an important part of the plan. The funds, amounting to about \$4,000,000, will be advanced by the company, which undertook to carry out the work in five years. When completed the works are to be taken over and operated by the government. The scheme is primarily intended to secure the growth of cereals, but it will undoubtedly lead to a considerable production of cotton, which may be grown as a rotation crop. The engineers employed by the corporation are Dutch.

Sir William Willcocks, who built the Assouan dam in Egypt, was engaged by the Turkish government to survey and prepare plans for irrigating the plain of Mesopotamia. A party of four engineers, the vanguard of this expedition, arrived in Bagdad in the latter part of 1908. The survey is expected to occupy three years. Preliminary estimates of the expenditure required reach the sum of \$37,000,000, and the estimated annual profit on this outlay is from 16 to 19 per cent.

Other regions greatly in need of irrigation are Cilicia, in Asia Minor, the valley of the Orontes, in Syria, and the valley of the Jordan.

MINERALS. The mineral wealth of Asia Minor is proverbial. On the shores of the Black Sea the coal fields of Heraclea extend for nearly 40 miles, and run inland for a distance of 200 miles, coming to an apex at Angora. The coal is in thick seams, but contains many impurities. There is only one company with a washing and screening plant, and the output is therefore limited to some 600,000 tons a year. At Surmene, in the vilayet of Trebizond, there are rich copper deposits; in 1908 it was reported that German and Austrian capitalists were negotiating for the purchase of these ore lands. Valuable ores are also found in other parts of the province, and the owners were reported as eager to sell their lands to Europeans. Extensive deposits of mineral oil and bitumen are reported in the district of Alexandretta, as well as in Mesopotamia. The vilayet of Aleppo, in Syria, and the valley of the Jordan, from the river's source to the Red Sea, also contain bituminous deposits. The world's supply of emery stone is derived mainly from the district

of Smyrna and the island of Naxos. Large quantities of salt are obtained from the salt mines at Salif, in the Yemen, and there are salt works at Aleppo, Erzeroum and elsewhere. Other minerals are worked to a small extent.

COMMERCE. The internal trade is greatly hampered by customs dues for the exportation of produce from one province to another. In the foreign trade there is levied a fixed *ad valorem* duty on all imports, which was increased in 1906, with the consent of the Powers, from 8 to 11 per cent. The new duty came into force on July 12th, 1907. There are also export duties. For the year ending Feb. 28th, 1906, the last year for which trade statistics are available, imports amounted to 3,136,602,000 piasters, and exports, 1,967,236,000 piasters (1 piaster equals 4.4 cents). The principal imports were, in millions of piasters: Cotton piece goods, 409; sugar, 264.; cereals and flour, 156; cloth, 150; yarn and thread, 147; woollens, 130; rice, 108; kerosene oil, 104; coffee, 95; cassimere, 64; rugs and carpets, 57; iron manufactures, 55; iron, 49; paper, 39; timber, 39. The principal articles of export were, in millions of piasters: Raw silk and cocoons, 293; raisins, 235; cereals and flour, 188; mohair, 91; figs, 90; coffee, 89; opium, 73; hides and leather, 73; valonia, 62; beans and peas, 58; minerals, 55; fruits, 55; carpets, 54; cotton, 51; wool, 50; eggs, 50; olive oil, 42; dates, 34; sesame, 31. The trade with the principal countries of import and export was as follows, in piasters:

From and to	Imports	Exports
Great Britain	1,099,180,000	633,008,000
France	266,884,000	481,080,000
Belgium	98,615,000	48,791,000
Netherlands	58,748,000	58,104,000
Germany	132,528,000	122,768,000
Austria-Hungary	651,614,000	213,730,000
Italy	244,620,000	99,595,000
Greece	56,062,000	54,358,000
Bulgaria	46,708,000	75,597,000
Roumania	79,530,000	40,000,000
Russia	182,016,000	59,384,000
Persia	73,375,000	6,548,000
Egypt	92,621,000	
United States	28,756,000	49,212,000

According to United States returns, imports from Turkey during the fiscal year 1907-08 amounted to \$10,761,184, and exports to Turkey \$1,976,500. According to a British consular report, the imports of the Benghazi district, Northern Africa, in 1907 amounted to £257,000 (£38,940 from Great Britain), and the exports £467,000 (£162,600 to Great Britain).

In Sept., 1908, it was reported that the censorship in the custom houses was abolished, so that books and newspapers and printed matter generally can now enter the country freely. The importation of electric appliances, telephones and pharmaceutical substances, formerly prohibited, is now permitted.

NAVIGATION AND SHIPPING. In 1905-06 the ports of Turkey were entered and cleared by 47,265 steamers, of 44,257,892 tons, and 129,796 sailing vessels, of 2,293,977 tons. Constantinople was entered in 1906 by 15,887 vessels, of 15,678,903 tons. The Germans have established a line of the largest and fastest steamers between Smyrna, Genoa and Marseilles, and in Oct., 1908, the North German Lloyd secured a through passenger train service from Hamburg direct to Genoa to meet the steamers from and to Smyrna.

INTERNAL COMMUNICATIONS. The railways in exploitation in 1907 had a total length of 3763 miles, of which 1238 miles were in Europe, 1474 in Asia Minor, and 1050 in Syria and Arabia. The total length of telegraph lines in 1906 was 28,890 miles.

The Smyrna-Aidin Railway is now the only line in Asia Minor still controlled by a British corporation. This line extends for 200 miles into the interior from Smyrna, and with its branches has a length of over 320 miles. In 1908, a 40-mile extension was being constructed from the end of the line to Lake Egidir, one of the largest inland seas in the southern part of Asia Minor. This is the only railway in Asia Minor which receives no kilometric guaranty from the Turkish government. The annual dividend during the past five years has averaged 6 per cent.

All other lines originally constructed in Asia Minor, whether with British or French capital, have passed under German control. The Bagdad Railway, a prolongation of the Anatolian Railway from Konieh through Asia Minor, is destined to reach the Persian Gulf through Mesopotamia. The first section of 125 miles, from Konieh to Eregli, was opened in Oct., 1904. There the work of construction came to a halt, owing to a lack of funds to provide for the kilometric guaranty. On May 23, 1908, a convention was signed at Constantinople between the Porte and the Bagdad Railway Company for the construction of the section from Eregli to Eli, near Mardin, some 60 miles southeast of Diarbekir, with a branch line from Tel-Abesk to Aleppo, a total of 542 miles. Plans must be prepared within a year from the signing of the convention. The line is to be completed in 7 years. The greatest difficulties will be encountered in the first two sections, in crossing the Taurus Mountains. The total cost is estimated at \$45,000,000. The branch to Aleppo will make it possible to go direct by rail from Constantinople (Haidar Pasha) to Mecca by the route Haidar Pasha-Konieh-Aleppo-Damascus.

The Damascus-Mecca line, 1093 miles long, reached Maan, 373 miles from Damascus, in Sept., 1905; Alakhzar, 463 miles, in Feb., 1907; Tebuk, 560 miles, in May, 1907; and on Sept. 1, 1908, the line was opened to Medina, 807 miles distant. It was reported that from Medina the line would probably be extended to Mecca by way of Rabigh and Jeddah—a route free from engineering difficulties and well supplied with water, whereas the eastern or highland route from Medina to Mecca lacks water. Rabigh is a town of about 3000 inhabitants, 3 miles from the sea and about 70 miles to the north of Jeddah.

For the proposed extension by Austria-Hungary of the railway from Uvac, on the Bosnian frontier, through the sanjak of Novibazar, to Mitrovitza (whence there is a direct line to Uskub and Salonica), see below, *History*; also **MACEDONIA**.

Early in 1907 an electric street car system was established in Damascus, which was also the first city in the empire to have electric lights. The electric tramway in Beirut was expected to be opened by the beginning of 1909. Both of these electric traction systems, the first in the empire, were constructed with French, Belgian, and native capital. Concessions for electric

traction and lighting have also been granted for Aleppo, Smyrna, and Salonica.

BANKS. The Imperial Ottoman Bank, with a capital of £T11,000,000 (1 Turkish lira, or 1£T = \$4.40), had on Oct. 31, 1907, a note circulation of £T1,313,100, and cash on hand amounting to £T2,567,100. At the end of 1908 it was reported that a new national bank was to be established, for which a large building was being constructed in Constantinople, where the head office is to be. The chief feature of the bank is to be the advancing of money on land, taking mortgages as security. The borrower is to be enabled to repay in annuities, so calculated that at the end of the appointed time the capital is repaid with interest. The initial capital of the bank is to be \$15,000,000, with the right to increase the amount to \$50,000,000. Of the 300,000 shares proposed, only Ottoman subjects will be allowed to own as many as 30,000. Every Ottoman subject purchasing 30 shares of \$50 each will be considered a founder. The initial capital of the Land Mortgage Department (*credit foncier*) is also to be \$15,000,000, which may be increased to \$100,000,000. The duration of the concession is 99 years. The interest on the money loaned on land security is to be below the legal rate in Turkey, which is 9 per cent. The sums loaned are to be repayable at the maximum in 50 years. Branches will probably be established in all the large cities of the empire. The national bank will not infringe on the privileges of the Ottoman Bank.

GOVERNMENT. The constitution of 1876, suspended in 1878, was restored on July 24, 1908 (see below, *History*). This constitution provides for a parliament consisting of a senate and a chamber of deputies. Senators are appointed by the Sultan, and their number must not exceed one-third that of the deputies. The latter are elected indirectly for a term of four years, one to every 50,000 male citizens. The president and vice-president of the chamber are appointed by the Sultan from lists submitted to the chamber. Parliament meets annually from Nov. 1 to Mar. 1, but the Sultan may extend the session. Bills originate with the council of ministers, but either house may demand the introduction of legislation, and it rests with the Sultan to order or to deny compliance with the demand. Laws require the consent of both houses and the Sultan. The Sultan appoints and dismisses ministers, concludes treaties, declares war, has control of the army and navy, and may dissolve the chamber of deputies, in which case an election must follow within six months. Liberty of the individual, equality before the law, freedom of the press and education are guaranteed. Mohammedanism is the state religion, but all religions are tolerated, and the existing privileges of various religious communities are guaranteed. Judges cannot be removed, except according to law.

In Sept., 1908, the Young Turk Committee announced that the constitution would be modified in a democratic sense. Two-thirds of the Senate would be made elective. Private bills would be introduced if supported by ten deputies. Every Ottoman citizen over 20 would have the right to vote. The Parliament, which met on Dec. 17, 1908, was elected by kazas, or districts, the electors having been chosen in nahies, or sub-districts, one elector to every 500 voters. The tendency in the Parliament

has been to subject the ministry to itself.

For administrative purposes the empire is divided into *vilayets*, under valis, or governors-general, assisted by provincial councils; the vilayets are subdivided into *sanjaks* and *kazas*, and the latter are further subdivided into *nahies*. The subdivisions of vilayets are under mutesarifs, kaimakams, mudirs, and muktars. Valis and the mutesarifs of six of the sanjaks (which are therefore known as mutesarifats) are directly responsible to the Minister of the Interior. The Lebanon has a special government presided over by a Christian mutesarif. The vilayets of Macedonia (Kosovo, Monastir, and Salonica) were given, by the agreements of 1903, 1904, and 1907 with Russia and Austria-Hungary, a special gendarmerie, commanded by an Italian general officer, who was assisted by officers of all the other European powers, except Germany. A Russian and an Austrian civil official assisted the Turkish inspector-general. A system of international financial control was established in 1905. In 1908 the country was still in a disturbed condition, but the restoration of the constitution brought order into the chaos of rival race ambitions, and in October the Powers withdrew their gendarmerie officers. (See MACEDONIA.)

Sultan Abdul-Hamid II., born Sept. 22, 1842, succeeded to the throne on the deposition of his elder brother, Murad V., on Aug. 31, 1876. At the end of 1908, the ministry was composed as follows: Grand Vizier, Kiamil Pasha; Sheikh-ul-Islam, Jemal-ed-Din Effendi; foreign affairs, Tevrik Pasha; interior, Hakki Bey; finance, Zia Pasha; justice, Hassan Fehmi Pasha; public instruction, Ekrem Bey; war, Ali Riza Pasha; marine, Arif Pasha; commerce and public works, Gabriel Effendi Noradunkian; evkaf (pious foundations), Shemseddin Bey; mines, forests and agriculture, Prince Mavrocordato; posts and telegraphs, Ghalib Pasha.

FINANCE. Up to the end of 1908 no statistics of revenue and expenditures were published. The revenue is derived from the tithes on agricultural produce, land and property taxes, import and export duties, monopolies, excise taxes on liquors, salt, paper, fisheries, and silk, etc. Military expenditures and the debt charges absorb the greater portion of the revenue. In 1881 the government made an arrangement with its creditors, by virtue of which a Council of the Debt Administration was appointed, with its seat at Constantinople. To this Council were handed over the excise taxes, the tobacco monopolies, the tax on Persian tobacco, and the Eastern Rumelia and Cyprus tributes. The sum of £536,363 was to be deducted from the total annual revenue of the Council for the service of the debt of 1878, amounting to £7,931,818 (sterling), and the balance was to be applied to the service of the general debt, four-fifths to interest and one-fifth to sinking fund. The interest was never to exceed 4 per cent., and any surplus was to be handed over to the government. The interest actually paid was 1 per cent. until 1903, when it was increased to 1¼ per cent. By a supplementary arrangement in 1903, it was decreed that 75 per cent. of any surplus beyond a fixed sum of £T2,517,375 for interest and sinking fund should be turned over to the government, and the remaining 25 per cent. should go to the sinking fund. In 1906-7 the government's share of the surplus had been mortgaged for at least three years ahead. The total revenue of

the Debt Administration in 1907-8 was £T3,919,003, against £T3,244,424 in 1906-7. On June 30, 1907, the Turkish debt stood as follows: Secured on Egyptian tribute, £T18,923,058; secured on the administered revenues (Debt Administration), £T76,378,680; various loans, £T10,867,406; total, £T106,169,144. Besides this there are due the balance of the Russian War indemnity (1878), which amounted to £T24,513,000 in 1898, since which year no payment was made, although the payment of £T350,000 falls due annually on January 14; and a debt of £T273,494 for the Beirut-Damascus railway.

ARMY. Military service is compulsory on all Moslems, but certain districts and tribes are either exempt or refuse to serve. Christians and Jews are excluded from the army, paying instead a tax of about \$1.65 annually. Moreover, any person can purchase freedom from active military service on payment of £T50, and another payment of the same amount will free him also from service in the second line. Thus the burden of active military service is borne exclusively by about two-thirds of the entire population; but, under the new reform régime, it is intended to make service universal. Liability to service begins at the age of 20, and continues until 40, as follows: Three years in the ranks of the first line, or *Nizam*, and six years in the reserve; nine years in the second line, or *Redif*; and two years in the third line, or *Mustafiz*. The reservists are liable to six weeks' actual military service each year, and those of the second line to one month every second year. There is also a second-class *Redif*, composed of the annual surplus of recruits beyond the required contingent. These receive from six to nine months' training the first year, and are liable to an annual service of 30 days during the following years. The empire is divided into seven military districts, with headquarters at Constantinople, Adrianople, Salonica, Erzerum, Damascus, Bagdad, and Sanaa. Besides these there are the military divisions of Hejaz and Tripoli, with headquarters respectively at Mecca and Tripoli. Excluding the troops in Arabia (30,000) and Tripoli (10,000), those in the depots, the 30,000 to 40,000 fortress artillery and engineers, and the 50,000 required for the defense of Constantinople and other places, the actual striking strength of the Turkish army consists of about 400,000 combatants. But on the other hand, there must be taken into account the 375,000 of the second-class *Redif* and 90,000 of the *Mustafiz*. Besides the regular military establishment there is also a *gendarmérie*, or rural police, of about 42,000, of whom 29,000 are in Asia Minor, 11,000 in Europe, and the remainder in Arabia and Tripoli. The latter province has a local militia force. The Lebanon has a small local police. Several important reforms were inaugurated in 1908. Among the more important may be mentioned the abolition of the old cumbersome military Commission, which consisted of 72 officers from the rank of field marshal to that of second lieutenant and which, under direct supervision of the Sultan, had control of military matters. This commission was replaced by another composed of 5 officers, under the supervision of the Minister of War. The pay of officers and men was increased; a new official military *Gazette* was established; new infantry drill regulations adopted; experiments were conducted with machine guns and automobile trains;

and renewed activity was to be seen in the musketry schools, at target practice, and on the manœuvring ground, all of which had been neglected for many years. The total military budget amounted to about £5,500,000 sterling.

NAVY. At the beginning of 1908 the effective navy consisted of 1 second-class battleship, of 9200 tons; 1 third-class battleship, 6700 tons; 1 armored coast defense vessel, 4690 tons; 2 protected small cruisers, 7200 tons; 2 unprotected small cruisers, 7200 tons; 3 gunboats, 1500 tons; 5 destroyers, 3120 tons; 24 torpedo boats, 2179 tons. Total, 39 ships, of 41,789 tons, besides 2 submarines. The increase in 1907 aggregated 6050 tons. Rear Admiral Douglas Gamble, R. N., was lent by the British Admiralty to Turkey for the reorganization of the Turkish navy, in both personnel and material. It was proposed to build 6 battleships, 12 torpedo boats, 24 gunboats, 4 river gunboats, 6 submarines, 2 mine laying ships, and 6 transports, as well as a naval dockyard and arsenal.

HISTORY.

The leading event of 1908 and, indeed, the most striking incident in recent European history, was the Sultan's unexpected announcement on July 24, that the constitution of 1876 was restored, thus marking the triumph of the revolutionary movement. The corrupt and disordered condition of Turkey had continued up to that time without interruption. In 1907 the Ottoman government had on its hands serious disturbances in Arabia, an incident of which was a mutiny on Feb. 13, on board the transport *Hodeida*, as the result of which, 300 of the troops jumped overboard while the vessel was passing through the Suez Canal. The disaffection in the army, in which the troops were badly armed and seldom paid, was again illustrated when the *Hodeida* arrived at Beirut. She was seized by mutineers who demanded the payment of arrears and the sending of provisions. Other mutinies, resulting from similar causes, also occurred during the year. The boundary dispute with Persia (q. v.), which continued also in 1908, was another source of trouble. Fighting continued on the Persian frontier, where the Kurds were adding to the difficulty by their depredations. In Macedonia (q. v.) the record of murders and outrages in 1907 showed that the question of reform and pacification was as far from settlement as ever. In 1908, down to the issue of the Sultan's decree these conditions remained unaltered. Assassination and pillage were repeated at short intervals in Macedonia; and the ill-paid and half-starved Turkish troops continued to give signs of disaffection. Nevertheless, only those who were in the counsels of the Young Turk party were prepared for the sudden triumph of the revolution as marked by the Sultan's announcement of a constitutional government.

THE RESTORATION OF THE CONSTITUTION. The Imperial iradé, decreeing the restoration of the constitution, was issued on July 24. It ordered a meeting of the Chamber of Deputies, provided for by the constitution which had been suspended in 1877. The decree was communicated at once to all the provincial authorities and it was received with great popular rejoicing. A general amnesty was proclaimed July 25. The Sultan announced that all appointments, with the exception of the Ministers of War and Marine, and the Sheik-ul-Islam, would be by the

advice of the Grand Vizier. On July 22, the former Grand Vizier, Ferid Pasha, had been dismissed, and Said Pasha had been appointed his successor. The existing ministry resigned and the hated palace officials were driven out. Izzet Pasha, one of the Sultan's favorites, fled to Europe. Hamdi Bey, the Minister of Police, and Ismail Pasha, who had organized the military spy system, were both dismissed. On July 29, an iradé was published, releasing all prisoners who had served two-thirds of their sentence. In an Imperial rescript it was declared that all Ottomans were on an equal footing, without distinction of race or religion, were assured against arbitrary arrest, and had permission to travel abroad and form commercial associations with foreign subjects (Aug. 1). On Aug. 3, the Sheikh-ul-Islam resigned on account of the Sultan's announcement that the appointments of the Minister of War and Marine should be retained by him, and not be subject to the Grand Vizier's nomination. On Aug. 5, Said Pasha resigned, and a new and more liberal ministry was formed with Kiamil Pasha as Premier. The Sheikh-ul-Islam, Jemal-ed-Din, who had resigned, was now reappointed. The Committee of Union and Progress, the organ of the Young Turk party, issued a manifesto, supporting the ministry and urging the people to be loyal to the Sultan. The new ministry characterized itself as a provisional government until the meeting of Parliament, saying that in the meanwhile their policy would consist in an economic administration of the finances, the promotion of efficiency in the army and navy, the revision of the code, the improvement of education, and the opening of government schools and colleges to Ottomans without distinction of race or creed.

CAUSES. In general, the revolution was said to be the work of the higher or middle classes, especially the members of professions and the better educated element in the population. The lower classes, except when they had come directly under the influence of the Young Turk officers or soldiers, were for the most part indifferent. The revolution, however, was the direct outcome of the Young Turk movement, which had been secretly and effectively carried on for many years. After the suspension of the constitution in 1877, the Young Turks came to the conclusion that gradual reform by peaceful methods was impracticable. Henceforth, their aims were distinctly revolutionary. They scattered throughout the countries of Europe, and Paris became the headquarters of their propaganda. A Committee of Union and Progress was formed and a paper founded by Ahmed Riza became its organ. Pamphlets were secretly disseminated and circulated in the empire. They did not venture to form organizations for active work within the empire itself until recent years, but directed the movement from abroad. On Oct. 20, 1904, they held a meeting at Bebek on the Bosphorus, and from that time on began to establish committees in various parts of the empire. Sections of five were organized and linked together. Each section chose its own chairman, but there were no known leaders of the movement. Changes appear to have been made in the organizations during the period of revolutionary activity immediately preceding the restoration of the constitution. From each section a delegate was appointed to a local committee in an important centre of population, and

each local committee was, in turn, represented at the headquarters of the Committee of Union and Progress, which are at Salonica. Almost nothing was known as to the real founders of the organization. It was said that women played an important part in acting as messengers and intermediaries. The recruits came from the middle classes, especially from the junior officers of the army and navy and from the officers in the middle and lower ranks of the civil service, the professional classes, and the ulema. Among the objects of the movement were the removal of Abdul Hamid and the checking of foreign interference in the conduct of Turkish affairs. No hope was felt for any adequate reform under the rule of the present Sultan, and the position of Turkey as a ward of the Great Powers, especially in the Macedonian administration, was humiliating to the Young Turks.

In Dec., 1907, a meeting, composed chiefly of Turks and Armenians, was held at Paris, representing the revolutionary and Liberal elements, and circulars were distributed condemning Abdul Hamid's rule. It pronounced Abdul Hamid hostile to education and to financial improvement, and declared that the country was in a wretched condition, that the revenues from taxation were stolen and not employed on public works, but only on the palace clique; that public moneys were wasted on a system of espionage; that transportation was defective and unsafe; commerce inert; agriculture backward, and the population obliged to emigrate. They demanded the abdication of Abdul Hamid, a radical change of officials, and the introduction of a representative system by means of a parliament. To these ends, they advised that such means be adopted as were best suited to the situation, armed resistance if necessary, and even a general insurrection, but wherever possible, peaceful measures such as persuading officials to resign, and appealing to the army not to fire on the people or on the revolutionists, the non-payment of taxes, etc. Macedonia, where the Salonica Committee of Union and Progress was especially active, was the main object of the revolutionary propaganda. Already in 1907 the movement had spread among the officers of the third army corps in Macedonia. Local organizations sprang up everywhere. The so-called "Bulgarian Internal Organization" is said to have afforded them a model and Freemasonry was also said to have been influential. For its own safety the movement was necessarily informal and it was only in its later phases that the committee had a definite meeting place. The second army corps at Adrianople was next approached, an emissary visiting them in secret and distributing seditious pamphlets among the troops. In the spring of 1908 an alleged plot was discovered at Salonica and the conspirators were seized and transported. By this time, however, the movement was so powerful and widespread that sometimes the spies sent to expose revolutionary designs, themselves joined the revolutionists.

IMMEDIATE OCCASION. The following account of the immediate occasion of the Sultan's action has been published. A certain emissary or spy, Nazim Bey, assuming that he had authority from the Sultan, opposed the policy of the Young Turkish commander, Essad Pasha, who had started a campaign against the prevailing corruption in Macedonia, and against the programme of

the reactionaries. On June 11, Nazim Bey was shot at and thereupon returned to Constantinople, saying that the Young Turks were in power in Macedonia and that the lives of the Sultan's representatives were not safe. A Commission was sent out from Constantinople, ostensibly for another purpose, but really to investigate the circumstances. Enver Bey, a leader of the Young Turks, was denounced. He was invited to Constantinople, but suspected treachery and refused to go. Thereupon a Macedonian officer, Niazi Bey, who served with distinction in the Greek War, raised the standard of revolt at Resna and Enver fled to his camp. This small body of revolutionists at Resna proclaimed the constitution in the name of the Committee of Union and Progress. Meanwhile, early in July, placards had been posted in Monastir, calling on all patriots to put an end to the terrible government under which Turkey suffered. These proclamations of the Young Turk party were torn down by the police. Against this small force of Major Niazi Bey, consisting of regulars, bashi-bazouks, and civil officers, two battalions of infantry were sent from Monastir, but refused to fire. Chemsî Pasha, who had devoted many years of his life to the task of keeping order among the unruly Albanians, was sent to the scene of the disturbance, but found matters so serious that he hesitated, awaiting definite orders from Constantinople as to what should be done. Having received orders to put down the revolt immediately and at all costs he started to lead his troops against the insurgents, but was shot down by his officers. Three Albanian battalions, which were about to be ordered to Monastir, mutinied. A Moslem priest sent from Constantinople to report on the situation was assassinated July 10. On July 12 a packet boat was fired upon by Albanians. On July 17 an attempt was made on the life of a general of division while he was reading a proclamation in the barracks at Monastir. There were signs of a concerted movement to get rid of the generals in command, who were supposed to be devoted to the Sultan. By this time, it seemed that the revolution had completely gained over the second and third army corps. The Sultan at first temporized, and hoping to satisfy the demands of the revolutionists by half-way measures, dismissed his Premier, and appointed Said Pasha. He was warned, however, by the revolutionists, that unless he proclaimed the constitution, they would march against Constantinople at once with an army 300,000 strong.

It was the fear of an imminent revolt of the army, too powerful to be resisted, that impelled the Sultan finally to issue his decree. The grievances of the troops were acute and of long standing. They were paid irregularly or not at all, and their pay was hardly enough to support life. In Macedonia, especially, the bad condition of the Turkish troops and soldiers appeared worse by contrast with the well paid and well equipped European officers in charge of the Gendarmerie. The Sultan had showed himself indifferent to the military except so far as concerned those immediately surrounding him. The army was, moreover, kept in terror by the widespread and oppressive system of spies. The troops of Asia Minor, as well as Macedonia, were said to be disaffected.

THE CONSTITUTION. The constitution of 1876, which was now restored, had been largely the work of Midhat Pasha, Abdul Hamid's first

Grand Vizier, who had been instrumental in bringing about the successful deposition of Abdul Aziz and Murad V., and placing Abdul Hamid on the throne. Abdul Hamid, however, soon laid aside the constitution (1877) and banished Midhat, who was afterwards put to death at Taif, May 12, 1883. Midhat was a greatly revered figure among the Young Turks, and had many friends. The party now looked for salvation to Murad V., as long as he lived, and afterwards to Reshad Effendi, the younger brother of the reigning Sultan, whom they hoped to see placed on the throne in his stead. The priests were friendly to the constitution and supported the Young Turks. The Sheikh-ul-Islam, the head of the Moslem ecclesiastical system, approved the constitutional movement. The constitution which the Sultan had suspended and now restored comprised among others the following provisions: Individual liberty asserted for all Ottomans, and declared inviolable; liberty of the press and of education; equality of all Ottomans before the law, whether Christian or Moslem; inviolability of domicile; abolition of torture under all its forms; a general legislative assembly to consist of two chambers, a Senate and a Chamber of Deputies; the Senate and its president to be named directly by the Sultan, and the Senators to hold office for life; the Deputies to be in the ratio of one to every 50,000 Ottoman males; elections to be by secret ballot and held every four years; Deputies to be eligible for reelection; the President and the two Vice-Presidents of the Chamber of Deputies to be selected by the Sultan from a list submitted by a majority vote of the chamber; no part of the constitution to be suspended or abrogated. The Young Turk movement for the restoration of the constitution was distinctly nationalist. Their committee in Macedonia had declared to the Powers and to the Christian population of Macedonia that full justice would be given to all inhabitants whatever their religion, but that they must remain Ottoman subjects. This naturally disappointed the small border nations, but it seemed essential to the success of the movement that no division of the empire or loss of territory should result. On the declaration of the constitution, there was at first extraordinary harmony between the Turks and the warring Macedonian nations. There and in other parts of the empire, racial differences seemed for the moment to be forgotten. Christians and Moslems fraternized. In Constantinople thousands of Turks, led by the Committee of Union and Progress, paid a visit to the cemetery to reverence the victims of the Armenian massacres of 1896. In turn the Armenians held memorial services for the Young Turks. The Greeks and Armenians formed an association for the promotion of friendship between the races.

Shortly after the announcement of the constitution, preparations began for the elections which were to be held in October. The Young Turks soon made it clear that they would not listen to the proposals of the various races for a federal form of government. They were determined that there should be a single sovereign parliament for the empire, in which the Turkish language alone would be permissible, and in which Turkish Mussulmans would necessarily form the vast majority. The programme of the Young Turks as outlined by the Committee of Union and Prog-

reass was published in September. Among its provisions may be mentioned the following: A cabinet responsible to the Chamber; a Senate not to exceed in number one-third of the Deputies; every Ottoman subject over twenty years of age to have the right to vote; no property qualification for the suffrage; the adding of an article to the constitution permitting the formation of political clubs; Turkish to be the official language; equal rights to all Ottoman subjects without distinction of race or religion; military service incumbent on non-Moslems as well as on Moslems; religious freedom; shorter term of military service; a modification of the constitution in order to give greater security to individual liberty; the necessity of new legislation on strikes and labor disputes; rendering of aid to the landless peasantry, but not at the expense of the present landowners; improvement of the system of the collection of revenues; the inspection of schools; and the promotion of agriculture and commerce.

At a congress held in Salonica, Oct. 19-Nov. 7, the Young Turks approved the programme of the party of Committee of Union and Progress, and decided on a number of measures of which the following may be mentioned: The sovereign's power is to be respected so long as he keeps his oath to the constitution; members of the committee elected as deputies to the Parliament shall there form a Party of Union and Progress; a Committee shall be named and shall publish a history of the Committee of Union and Progress and of the revolution; regulations shall be drafted governing the relations between the Committee and the army.

Kiamil Pasha, whom the Sultan, under pressure, chose as his first Grand Vizier in the new régime, was a liberal of the old school, who had been Grand Vizier early in the reign and had used his influence on behalf of the constitution and against the Palace clique. This had caused his dismissal and disgrace, and his life was spared, it is said, only through the intervention of the British Embassy. He was regarded as a friend of the British and as a supporter of Reshad Effendi, who after thirty years' imprisonment was released in September, and received in audience by the Sultan. Kiamil's programme as formulated in the first Cabinet Council declared for an honest budget, a civilized method of taxation, the reform of the bureaucracy and of the control of public funds; the collection of taxes by the Porte and not by the Palace; the reorganization of the army and navy, and universal military service without distinction of creed or race. The ambassadors at foreign courts were recalled and new ones appointed in their place. Steps were taken to improve the educational system. A request was sent to the Prussian Ministry of Education to place at the disposal of the Turkish government information in regard to the higher educational system of Prussia for guidance in forming the higher educational institutions of Turkey.

An important event to Albania was the opening of primary schools at Tirvana and Valona and other towns in the south, permitting children for the first time to receive instruction in their native tongue.

THE PARLIAMENT. The elections passed off without any disturbance. On Dec. 17 the new Parliament was opened by the Sultan in person. The Sultan in his address to the assembly de-

clared that the first Parliament had been dissolved because popular education had not attained a sufficiently high standard. Now that it had attained the required standard he had resolved to assemble the Parliament again and to again promulgate the constitution. He referred in terms of regret to the Prince of Bulgaria's unexpected abandonment of his allegiance to the empire, and to the Austro-Hungarian annexation of Bosnia and Herzegovina, and declared that it was the task of his ministers now to decide on measures for safeguarding the national rights, that he hoped Parliament would support them in this work, and that a peaceful solution of the problems might be attained. He declared that the objects to which ministers and Parliament should direct their labors were the reorganization of the national finances, the development of the country's resources, the spread of art and education, and the promotion of military and naval efficiency. Parliament assembled in the same hall that had been used by the Parliament of 1876, which was dissolved in 1878.

FOREIGN AFFAIRS. The paramount issue in Turkish foreign relations arose from the Bulgarian declaration of independence and the Austrian annexation of Bosnia and Herzegovina, for an account of which see the following articles: AUSTRIA-HUNGARY, BALKAN QUESTION and BULGARIA. A difficulty occurred with the Italian government early in the year; the Porte having refused on Apr. 14 to admit the demands of Italy for the opening in Turkey of Italian post offices. The Italian government planned a naval demonstration in Turkish waters, but before the fleet started was informed that the Porte had acceded to the demands. Down to the time of the Austrian annexation of the provinces, the relations between the Porte and Austria were friendly, as appeared in the affair of the Novi-Bazar Railway, the Porte having consented to Austria's request for the concession of the right to complete a line from between Mitrovitza and Sarajevo (see MACEDONIA). In September occurred a difficulty with the Bulgarian government on account of the failure to invite the Bulgarian representative to a diplomatic dinner at Constantinople. The Bulgarian agent was withdrawn. This was followed by the trouble over the military occupation of the Oriental Railway by Bulgaria. For further details see BULGARIA and BALKAN QUESTION. The attitude of Turkey toward Bulgaria and Austria-Hungary after the declaration of independence and the annexation; her protest against the action of Crete in declaring for union with Greece; the proposals for a conference of the signatory Powers to the Treaty of Berlin, and the negotiations for the settlement of the difficulty down to the close of the year are discussed under BALKAN QUESTION. It was generally held that, with the institution of parliamentary government in Turkey, German influence at Constantinople had received a severe blow. The Kaiser had for a long time posed as the good friend of Abdul Hamid. The constitutional régime had scarcely won its way when it was seriously threatened by Austria's action in regard to Bosnia and Herzegovina; and Austrian influence was, of course, largely German. It was natural, on the other hand, that the Young Turks should turn to France, whence the Turkish reformers have drawn their main inspiration, and to

Great Britain. French and British ascendancy thus replaced Germany's predominant position in the empire.

OTHER EVENTS. On May 22, the Sultan issued a decree sanctioning the building of four additional sections of the Bagdad Railway, forming the Taurus division, which was thought to present the greatest difficulties. These sections were to complete the connection between Constantinople and the holy cities of Islam. The Hedjaz Railway was opened at Medina amid great popular rejoicings on Sept. 1. It was projected in 1900. Aleppo and Damascus were already connected by rail, and when the Taurus section of the Bagdad Railway is completed they will be connected directly with the shores of the Bosphorus. Reports of Kurdish depredations were frequent during the year. In October Kurdistan and Mesopotamia were reported to be in a disturbed condition. The Armenians complained of their attacks, and it was said that over a hundred villages had been pillaged. These reports, however, were not verified. In November the Armenians pressed their old grievances against the Kurds on the attention of the authorities at Constantinople. Armenian delegates appeared there with the demand that the losses incurred by some 50,000 of their people through depredations of the Kurds during the Armenian Massacres should be made good. They alleged that this number had been dispossessed. It was reported that two mixed commissions were to be appointed to look into the grievances. For an account of the trouble on the Persian border see PERSIA.

TURKS AND CAICOS ISLANDS. Two British groups of islands at the southeastern extremity of the Bahamas, attached administratively to Jamaica. There are over 30 islands, Grand Caicos being the largest; eight are inhabited. Total area, 169 square miles; population (1904) 5,300. The principal industry is the making of salt, of which 1,800,000 bushels were made in 1907; the yield was above the average, but the price was low. Pita, or sisal, covers 3200 acres. Other products are sponges, turtle-shells, and conches. In 1907 imports amounted to £27,660; exports, £23,817. The revenue and expenditure in the same year were £391 and £119 respectively. The Commissioner in 1908 was F. H. Hawkins. On Sept. 10, 1908, a devastating storm swept the islands, doing much harm to the salt pits and shipping.

TÜRK, STEPHEN. A Hungarian soldier, died at Buda-Pesth, on May 2, 1908. He was born at Baja, on Aug. 10, 1825, and took part in the Hungarian revolution of 1848-49. He was in exile for many years and served as a general under Garibaldi in his Italian campaigns.

TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE. An institution for the education of negroes at Tuskegee, Alabama, established in 1880. The attendance for 1907-8 was 1621, from 38 States and 21 foreign countries. The Institute, in addition to the work done in the class room and in shops, carries on a wide range of what may be designated extension work. This includes the annual Negro Conference, with its numerous branches; the publication of a weekly farm paper, *The Farmers' Monthly Institute*; a short course in agriculture; the farm demonstration work, supported by the United States government and the Gen-

eral Education Board; a town night school and town day cooking school; a county Ministers' Institute; ministers' night school; weekly mothers' meeting; supervision of the County and State Fair; the National Negro Business League; and the general effort to coöperate with the county officials to improve the county schools. Gifts during 1907-8 amounted to \$116,783.66 for endowment; \$28,335.36 for improvements, and \$252,707.78 for current expenses and special purposes. The endowment fund in 1908 was \$1,513,440.03. The equipment is valued at \$917,000, not including certain unsold public lands, which are valued at \$200,000. The Principal is Dr. Booker T. Washington.

TUTUILA. One of the islands of the Samoan group, belonging to the United States, situated 46 miles southeast of Upolu. Its area is 54 square miles. Tutuila contains the best harbor of the Samoan group, Pago-Pago, or Pango-Pango. The shipments of merchandise from the United States to Tutuila in 1907 were valued at \$108. The shipments of gold and silver amounted to \$61,328. In 1908 the shipments of merchandise from Tutuila to the United States amounted to \$66,479.

GOVERNMENT. Tutuila and other islands of the same group came in 1899, by treaty with Great Britain and Germany, into possession of the United States. Since that time the government has been administered by an officer of the United States Navy, who is Governor of the Islands. Recommendations have been made by successive Secretaries of the Navy in their annual messages for a form of government for the Islands, but up to the present time no such action has been taken by Congress. The Governor, under the direction of the President, has full powers in the civil administration of the Islands, but the local government is largely delegated to native chiefs under the supervision of the Governor. Schools are conducted for native children and considerable progress has been made in improving the sanitary condition of the Islands. The population of the Islands is about 5800. The Governor in 1908 was Captain Charles V. T. Moore, U. S. N.

TYPHOID FEVER. The new and disquieting fact that certain persons who have had typhoid fever continue to harbor and distribute the germs of this disease for years afterwards gave rise to much investigation during 1908, with surprising results. Soper's case of a woman cook who acted as a chronic carrier, which was referred to in the YEAR BOOK of 1907, has been kept isolated and under observation for sixteen months and weekly examinations of the stools made. Typhoid bacilli in large numbers have usually been found, and treatment by internal antiseptics has been of no avail. Further investigation showed that a certain percentage of healthy persons who have never had typhoid are capable of harboring the bacilli. Klinger examined the feces of 1700 healthy persons who had not knowingly had the disease and found typhoid bacilli in the stools of 11. It was asserted that one in 500 of this class of healthy individuals are carriers; while of those who have suffered a definite attack of typhoid probably five per cent. thus disseminate the disease. The largest number of cases traced to any single carrier is 32. This woman worked in a dairy on an estate in Prussia and had had her attack 17 years before. The gall bladder is believed to act

as a sort of reservoir for this form of infection, and this belief has been confirmed by finding this organ infected at operations for gall stones; a number of autopsies on typhoid carriers has shown the gall bladder to contain large numbers of bacilli. Women predominate as carriers and this coincides with the greater prevalence of gall stones among them. Women also have exceptional opportunities for spreading the infection, owing to their occupations as cooks, dairy maids, bakers and general servants. These discoveries open up a difficult problem in municipal sanitation. In these carriers the number of bacilli excreted is greater than the output of a patient at the height of an attack of typhoid, and isolation for long periods of time of otherwise healthy individuals, is as yet impracticable, even were the difficulty of detecting such individuals overcome. Additional evidence that oysters and other shellfish are a not infrequent means of spreading typhoid came to light in 1908. For many years there has been a constant and unexplained prevalence of this disease in Belfast, Ireland, notwithstanding sanitary precautions and an excellent water supply. The mortality has been greatly in excess of that due to typhoid in any other cities in the British Isles. A special inquiry being instituted by several experts, it was determined that the unrestricted gathering and consumption by the poorer classes of uncooked cockles and other shellfish from the sewage-laden shores of the Lough was the cause. The wealthier classes and the Jews were practically exempt, the latter refusing to eat shellfish. The New York Board of Health had been studying the cultivation of oysters since 1904 and as a result promulgated the following addition to the Sanitary Code: "No oysters shall be held, kept, or offered for sale anywhere in the City of New York without a permit in writing from the Board of Health, and subject to the rules and regulations of said board." The aim of this measure is to prevent the sale of fattened oysters, which are usually exposed in beds polluted by sewage. See SANITATION.

TZE-HSI or **TSI-AN**. Dowager Empress of China, died on Nov. 15, 1908, at Peking. She was born in Nov., 1834, the daughter of a Manchu military official (a brother of Prince Chun), and at her birth was named Yehonala. Her remarkable beauty as a girl caused her to be selected, at the age of sixteen, as a concubine of the fifth class for the Emperor Hsien-feng, and upon the birth of her son, T'ung-chi, was raised to the rank of "Imperial Consort." Extraordinarily clever, ambitious, and utterly unscrupulous, she easily outwitted the weak-minded Emperor, and even succeeded in making an ally of the Empress. The Emperor died in 1861, and was succeeded by Tze-Hsi's son, T'ung-chi, who, however, died in 1875 (about two years after he had attained his majority), and was succeeded by her nephew, Kwang-Hsu. Though it was entirely contrary to Chinese custom, she managed to retain much administrative power. Even after Kwang-Hsu had reached his regal majority, she continued in possession of the Great Seal, and controlled the appointment or dismissal of those of the first and second rank in the official hierarchy. Kwang-Hsu's reform measures she effectually suppressed in Sept., 1898, by manœuvring him into a political position even more dependent than he had hitherto occupied, by causing him to be imprisoned in his palace, and by punishing with death

all the reformers she could apprehend. She professed great regret over the results of the Boxer uprising in 1900, but was accused of having at least countenanced it. She was said to have been demented by "the lust for power and gain," and though a woman of great capabilities her record was deeply stained, her gifts of statesmanship being frequently directed to selfish and ignoble ends. See CHINA, and KWANG-HSU.

UECHTRITZ, KUNO VON. A German sculptor, died on July 29, 1908. He was born in Breslau, on July 3, 1856, and studied under Tilgner, at the Vienna Academy. The earlier years of his career were devoted chiefly to portraiture; he also produced several interesting pieces in which he employed variously colored marbles. In 1886 he settled in Berlin and thereafter devoted himself to sculpture of a more ambitious sort, executing fountains, memorials and other monumental works of a high order of merit. His best known pieces are the statue of the Elector George William, in the *Siegesallee*, Berlin (1899), the von Moltke monument in Breslau, and the statue of Bismarck, at Grimme. The Steuben memorial, designed by him, was awarded a gold medal at the St. Louis Exposition of 1904.

UGANDA PROTECTORATE. A British possession in East Africa. Area, 223,500 square miles; population, about 4,000,000 (450 Europeans). The sleeping sickness has killed off thousands of natives. Coffee, cotton, and rubber have been introduced. Ivory, skins, rubber, and chillies are the principal exports. Iron, copper, gold, graphite, mica, and other minerals are found. The imports are mainly foods, drinks, and textiles. The imports in 1905-6 amounted to £206,181; the exports, £108,204. The Uganda Railway, owned by the government, runs for a distance of 584 miles from Mombasa, on the coast, to Port Florence, on the northeastern corner of the Victoria Nyanza. Several steamers are operated on the lake in connection with the railway. The Imperial grant-in-aid in 1907-8 was £85,000. The Governor in 1908 was Sir H. H. Bell.

On April 9 the governor, Sir Hesketh Bell, published in England an appeal on behalf of the sufferers from the sleeping sickness. During the preceding five years the deaths from that cause were estimated at over 200,000, more than two-thirds of the population. The lake shore and islands were deserted. The fathers of the Algerian Mission were working to administer relief, but their resources were meagre. The subject was much discussed, and a Sleeping Sickness Bureau was formed in London. On May 23 a serious famine was reported in the Usoga provinces, the crops having completely failed. Deaths from the famine were estimated at 4,000, and the government was feeding some 50,000 persons in the stricken region. In August the government measures to check the spread of the sleeping sickness were reported to have had considerable effect.

ULRICH, CHARLES FREDERICK. An American painter, died on May 15, 1908, at Berlin. He was born in New York City on Oct. 18, 1853. After studying art at Cooper Union and at the Academy of Design, he went to Munich, and worked under Loefftz and Lindenschmidt. He won a bronze medal at Munich in 1879; the same year he returned to New York City. He was elected an Associate member of the National

Academy in 1883. In 1884 his "Land of Promise" (a group of immigrants landing at Castle Garden) won the Thomas B. Clarke prize at the National Academy. His other more important pictures include: "The Wood Engraver" (1882); "The Glass Blowers" (1883); "Waifs" (1885); and "Relics of Bygone Days" (1885). In 1886 his "Glass Blowers of Murano," now in the Metropolitan Museum of Art of New York, won the \$2500 prize offered by the American Art Association. In 1884 he went to Venice to live, and in 1897 moved to Germany.

UNEMPLOYMENT. The extent of unemployment in the United States as a result of the industrial depression was greater in 1908 than at any time since 1893-94. In January there were street processions and public demonstrations by the unemployed in New York, Boston, Chicago, Cincinnati, St. Louis, and other large cities. Throughout the early months of the year repeated demands were made upon city mayors and councils that work be provided by public undertakings. Similar demands were made upon State Legislatures in Massachusetts and New York. There were also demands for pensions for the unemployed and for forcible reduction of rents, including a rent strike by New York's tenement population. The number of unemployed could be only roughly estimated, but a very conservative estimate of those out of work, who in normal times were employed, was 250,000 men, not including women and children. The unemployed tended to congregate in the larger cities. Municipal lodging houses were filled to capacity; demands upon charity organizations were greater than could be met, owing both to decreased income and to very unusual need of help. While the number of unemployed probably was at no time greater than in January, the number of those in actual distress continued to increase until the middle of the summer. The unskilled workers and those marginal laborers who are the last employed and the first discharged were the first to feel distress. But as the spring advanced many poor but respectable workmen, including many skilled laborers, found their savings gone, their credit at local stores exhausted and themselves dependent on an already overtaxed charity. Applications to the Army and Navy increased 50 per cent. Naturally the increase in crime, especially crimes against property, was quite marked.

In New York City the situation was very serious. The number of those in the city out of work who were ordinarily employed was estimated at not less than 200,000 in the early spring; some who were familiar with conditions placed the number at very many more than this, though under such conditions sympathy leads to exaggeration. The New York Society for the Improvement of the Condition of the Poor was caring for more than 4000 families in May, as against 2475 in January. The Charity Organization Society cared for 73 per cent. more families in the year following October, 1907, than in the year preceding. It also reported that during the year the applications by homeless men had been five times their usual number; and that during the winter months the woodyard furnished employment to five times the usual number. To avoid demoralizing fairly capable men and women who wanted work but for whom no work could be found was a serious problem with organized charity during 1908. The reports of

the New York State Labor Department showed that 32.7 per cent. of the membership of union labor in that State was out of work at the beginning of the year, as compared with an average of 18.3 per cent. for the five years 1902-6. The percentages in the metal, building, clothing, and tobacco trades were respectively 30.9, 42, 43.6 and 55. By the end of March the unions reported that 35.7 per cent. of their members were idle, and that 27 per cent. had had no work at all since Jan. 1. The average percentages for this date were 17.5 and 10 respectively. Since the number reported out of work on account of disability, or strikes and lockouts, was not unusual, the increase above the normal was due to "lack of work." Beginning with April, there was a steady and gradual improvement in the state of employment for union labor. This was not, however, as fast as the usual rate of improvement during the spring; but after June the improvement was at an unusually rapid rate.

No doubt these conditions in New York State were paralleled in other States with large industrial centres, and those in New York City in other large cities. Thus in Brooklyn the demands on the charitable association as measured in numbers of applicants, were 70 per cent. higher in January, 1908 than in January, 1907; in Buffalo the increase reported was 170 per cent.; in St. Paul, 50 per cent.; in Cincinnati, 114 per cent.; in Cleveland, more than 100 per cent.; in Philadelphia, 120 per cent.; in St. Louis, 74 per cent.; in Chicago, fully 50 per cent.; and in Baltimore, 48 per cent. Everywhere there was a notable increase in the number of homeless persons in January, 1908, as compared with a year before. For this reason also the amount of expenditure for charitable relief increased in some cities even more than the number of applicants. In many cities special days were set aside as "emergency" or "charity day" for the raising of funds; committees of business men were formed for the same purpose. Churches and organizations of churches made extraordinary efforts in neighborhood relief. A number of cities followed the examples of Baltimore and Columbus, Ohio, in providing work on parks, streets and alleyways.

In England the condition of unemployment, especially at the close of the year 1908, was likewise graver than at any time since 1893. The situation was very serious in London and Glasgow, but was bad in most of the cities of the Midlands and North of England. In Glasgow the unemployed were loosely organized and made their conditions known to the city council. Relief work in developing park land and other city property was provided. Similar movements followed in Manchester, Leeds, Bradford, Birmingham and elsewhere. In London, in November and December, there were street parades and demonstrations in Trafalgar Square by large and threatening crowds, who demanded not charity, but work. The central committee at London and the local committees in other cities, organized under the Unemployed Workmen's Act of 1905, used all the public funds available and all the private subscriptions they could secure in providing work. Parliament devoted much time to the problem in November and the government made plans for expending ten to fifteen million pounds in providing work. The number of unemployed in England and Scotland was conservatively estimated in November at 1,100,000.

Kier Hardie, a socialist member of the House of Commons, put the number at 2,250,000, of whom he thought three-fourths were skilled artisans. The general cause of this unusual condition was the industrial depression throughout the world. The industries most seriously affected in Great Britain were iron and steel, shipbuilding and cotton. The closing of 400 cotton mills in the Lancashire district in September, as the result of a wage dispute, added about 140,000 to the number of unemployed. See STRIKES AND LOCK-OUTS.

Nearly every country of Continental Europe experienced more than the usual amount of unemployment in 1908. This condition did not develop as early as in the United States, but in the spring Vienna, Berlin, Amsterdam and The Hague reported large numbers of men out of work. This state of affairs was attributed in large measure to the American financial crisis and following depression. The great decrease in the American demand for goods and heavy losses by foreign investors in American securities brought about a considerable reduction in employment. In Vienna the Municipal Employment Bureau established branches in various parts of the city and rendered gratuitous services in finding work for those seeking it. In Berlin one of the morning dailies issued an afternoon supplement containing only advertisements for work and for help and distributed free copies on the streets. In Amsterdam the decline in the demand for diamonds threw out of work several thousand skilled cutters. There was also a great lack of work in the building trades, between fifty and sixty per cent. being unemployed, and labor disturbances among the 'longshoremen, growing out of the *padrone* system of employment, added to the ranks of idle men. Relief was sought by a novel plan of unemployment insurance, through coöperation of the city and the trade unions. The city agreed to increase by one-half the amount allowed by trade-unions to its unemployed members. Since the unions would assist only the deserving, the plan was thought to insure the best possible distribution of the city's aid. The fund available for relief was increased by \$100,000 raised by popular subscriptions and by collections on the street. To unify the relief administration, a committee of five, two appointed by the city, two by trade-unions and one by these four, was placed in charge. No doubt, the numbers of unemployed in Europe were greatly increased by the hundreds of thousands of aliens who left the United States in the months following October, 1907, every European country receiving its quota. See IMMIGRATION AND EMIGRATION.)

UNITARIANS. A religious denomination whose distinctive feature is the acceptance and adoption of the principles of freedom and progress in religion. In 1825, representatives of Unitarian churches in the United States, united in establishing the American Unitarian Association. The Association is the administrative body of the church; with headquarters in their fine building at 25 Beacon Street, Boston, Mass. In 1908 there were 483 societies and 558 ministers. Five new churches were added during the year. The receipts of the Association were \$260,272, and its permanent funds amount to \$1,176,743. Divinity schools are maintained at Cambridge, Mass., Meadville, Pa., and Berkeley, Cal. Eight academies are under its auspices.

Among the organizations of the church are the National Conference of Unitarian and Other Christian Churches, the Unitarian Sunday School Society, the Young People's Religious Union, and many Unitarian clubs and ministerial associations. The Fourth Congress of the International Council of Unitarian and other workers, and the National Conference were held in Boston in September, 1907. The publication department circulated 387,000 free tracts in 1907-8, and sold 12,000 books. Active missionary work is carried on at many points among the Icelandic, Norwegian and Swedish immigrants. Field secretaries are employed in New England, New York, Chicago, Colorado and the Pacific Coast. Among the Unitarian periodicals are the *Christian Register*, published in Boston, *The Unitarian*, published in New York, and *The Pacific Unitarian*, published in San Francisco. The President of the Association is Rev. Samuel A. Eliot, D.D., and the Secretary, Rev. Lewis G. Wilson.

UNITED BRETHREN IN CHRIST. A religious denomination which took its beginnings among the Germans of Pennsylvania under the preaching of Philip William Otterbein. The first formal conference met in Baltimore in 1789 and the first general conference at Frederick, Md., in 1900. The membership in 1908 was 281,309. There were 3,872 organized churches and 1,967 itinerant and 432 local preachers. There were 3,604 Sunday schools in which were enrolled 311,848 scholars and 39,008 teachers. Missions of the church are conducted in Japan, West Africa, Porto Rico, China, and the Philippines, and domestic missions are also carried on. The total expenditures for missions amounted in 1908 to \$169,079. The church devotes much attention to higher education. Among its institutions of higher learning are Leander Clark College at Toledo, Ohio, Otterbein College at Westerville, Ohio, and Central University at Indianapolis, Ind. Efforts have been made during several years to bring about the union of the United Brethren, Congregational, Methodist Protestant, and several smaller denominations. The movement was temporarily halted by the decision of the National Council of Congregational Churches in 1907 to postpone action.

UNITED EVANGELICAL CHURCH. A religious denomination organized in 1894 as the result of a division in the Evangelical Association (q. v.). In 1908 the church numbered 70,116 communicants, 1,014 churches and 553 ministers. In the Sunday schools were about 90,000 scholars and 12,000 officers and teachers. The Church Extension Society has general charge of establishing new churches. Missions are sustained in China. Among the educational institutions under the auspices of the denomination are Albright College, Meyerstown, Pa., Dallas College and La Creole Academy at Dallas, Ore., and Western Union College at La Mars, Iowa. The denomination maintains a publishing house at Harrisburg, Pa., where are published the *Evangelical*, the official organ of the church, and several other periodicals.

UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA. A religious denomination founded in Pittsburg, Pa., on May 26, 1858, by a union of the Associate and Associate Reformed Churches. The membership in 1908 was 153,956, of whom 24,170 are in the foreign missionary fields. There were 1098 ministers and 1082 churches. In the 1336 Sabbath schools were

138,298 scholars, and 13,996 officers and teachers. The contributions from the Sabbath schools for the year amounted to \$154,219. The total contributions for all purposes for the year amounted to \$2,441,587, of which \$755,158 was for salaries of ministers; \$818,789 for congregational purposes; \$566,661 for the Boards of the Church, and \$294,340 for general purposes. The net value of church properties and funds for 1907 was \$16,489,095. The church sustains seven colleges in the United States and one in Assiut, Egypt. There are theological seminaries at Allegheny, Pa., and Xenia, Ohio. The property value of its institutions is \$917,700. Missions are carried on in Egypt, India and the Sudan; there are missions also among the negroes in the South. The leading papers of the denomination are the *United Presbyterian* and the *Christian Instructor*, and there are several other periodicals issued from the publishing house, which is in Pittsburg, Pa.

UNITED SOCIETY OF CHRISTIAN ENDEAVOR. See CHRISTIAN ENDEAVOR, UNITED SOCIETY OF.

UNITED STATES. The total area belonging to or under the jurisdiction of the United States is estimated by the United States Coast and Geodetic Survey at 3,743,344 square miles, divided as follows: United States, 3,026,789; Alaska, 590,884; Philippine Islands, 115,026; Hawaiian Islands, 6,449; Porto Rico, 3,435; Panama Canal Zone, 474; Guam, 210; Tutuila Group, Samoa, 77. The total population, including Alaska and Hawaii, but excluding Porto Rico and the Philippines, was, according to the census of 1900, 76,303,387. According to a Federal estimate made in 1908 the population of the continental United States was 86,895,359, while the whole population was estimated at 87,189,392.

AGRICULTURE. The aggregate value of the agricultural products of the United States in 1908 was, according to estimates made by the Department of Agriculture, \$7,778,000,000. The production was above the average of recent years in nearly all crops. The farm value of products was \$290,000,000 above the value for 1907; \$1,023,000,000 above that of 1906; and \$3,061,000,000 above the census amount of 1895. Expressed in the form of percentage of increase the amount for 1908 was 4 per cent. greater than that for 1907. See AGRICULTURE, articles on agricultural subjects and the articles on different crops. See also State articles.

INDUSTRIES. See MINERAL PRODUCTION; IRON AND STEEL; COTTON; SUGAR; RAILWAYS; SHIPBUILDING; SILK; TEXTILE MANUFACTURING; BOOTS AND SHOES; LEATHER; STRIKES AND LOCKOUTS; TRUSTS, ETC.

FOREIGN COMMERCE. The tables on pages 716 and 717 show the exports and imports of the United States for the fiscal years 1906, 1907, and 1908. These tables, together with the summary given below are from data prepared by the Bureau of Statistics of the Department of Commerce and Labor. The exports for the fiscal year ending June 30, 1908 show a decline of a little more than \$20,000,000 over those of the fiscal year 1907, while imports show a decline in the same period of \$240,000,000. These results were caused by the general decline which characterized the trade figures of the commercial world during that period. The decline in exports occurred exclusively in crude materials for use

in manufacturing, both food stuffs and manufactures showing an increase over the preceding year. In imports the decline occurred in food stuffs, in manufacturers' materials and in manufactures. The food stuffs exported amounted to \$521,000,000 in value against \$513,000,000 in 1907; crude materials for use in manufacturing, \$557,000,000 against \$593,000,000 in the preceding year; manufactures for further use in manufactures, \$261,000,000 against \$259,000,000 in 1907, and finished manufactures, \$489,000,000 against \$480,000,000 in 1907. Food stuffs imported amounted to \$292,000,000 against \$308,000,000 in the preceding year; crude materials for use in manufacturing, \$363,000,000 against \$477,000,000 in 1907; manufactures for further use in manufacturing, \$196,000,000 against \$274,000,000 in 1907, and manufactures ready for consumption, \$331,000,000 against \$364,000,000 in 1907. Raw cotton exported fell from 4,513,217,220 pounds in 1907 to 3,816,998,693 pounds in 1908, the value falling from \$481,277,797 in 1907 to \$437,788,202 in 1908. Bread stuffs, as a whole, show an increase of \$31,000,000 in value; meat and dairy products, a decline of \$10,000,000; mineral oil an increase of \$20,000,000, passing for the first time the \$100,000,000 mark; wood and manufactures of wood a decline of nearly \$2,000,000; iron and steel manufactures an increase of \$2,000,000, and copper an increase of \$10,000,000. Corn shows a falling off in the quantity exported, the total for the year 1908 being 52,000,000 bushels as against 83,000,000 bushels in 1907, while wheat shows a marked increase, the total for 1908 being 100,000,000 bushels against 76,500,000 in 1907; flour shows a slight decline, being 13,927,000 barrels in 1908 against 15,584,000 barrels in 1907. In copper the exports for the first time exceeded \$100,000,000, the total value of copper ingots, bars, plates, and other manufactures exported in 1908 amounting to \$104,000,000 against \$95,000,000 in 1907 and \$81,000,000 in 1906. The quantity of ingots exported in 1908 was 702,000,000 pounds against 414,000,000 in the preceding year, showing a large increase in quantity, though a marked decline in price, since the 702,000,000 pounds exported in 1908 were valued at \$101,000,000 while the 414,000,000 pounds exported in 1907 were valued at \$89,000,000.

The decline in the foreign commerce in the fiscal year 1908 was not peculiar to the United States, but was in fact a part of a general and marked decline throughout the world in international trade movements, as measured by figures of value, though the decline in the case of the United States is, on the import side, more pronounced than that of certain other countries. Exports of manufactures, despite the generally depressed condition of international trade, showed an increase over 1907 or any earlier year in the history of the export trade. Europe continues to be the principal market for the manufactures exported from the United States, as well as for the raw materials. The value of American manufactures exported to Europe in the fiscal year 1908 was, in round terms, \$368,000,000 against \$355,000,000 in 1907. Rapid as is the growth in exports of manufactures, the share which Europe takes in this has been in recent years apparently increasing. Of the manufactures exported from the United States during the past four years, 46.3 per cent. went to Europe in

1905; 46.4 per cent. in 1906; 47.9 per cent. in 1907, and 49 per cent. in 1908. The most important of the manufactures exported to Europe were those for further use in manufacturing, such as copper, chiefly ingots and bars, leather and manufactures thereof, wood and manufactures, chiefly lumber, and manufactures of iron and steel. Other important manufactures exported to Europe included refined mineral oils, naval stores, agricultural implements, drugs and dyes, manufactures of cotton, carriages and cars. North America came second in the order of magnitude in exports of manufactures, the value of manufactures exported to all North America being \$189,000,000; to South America, the exports of manufactures for the year were, in round terms, \$72,000,000, and to Asia, the total value of manufactures exported was also \$72,000,000; while \$42,000,000 worth were exported to Oceania and \$10,000,000 worth to Africa.

The trade of the United States with its non-contiguous territory showed a slight increase over that of 1907, although the gain occurred exclusively in merchandise sent from these territories to the United States. The value of merchandise shipped from the United States to its territories aggregated \$65,771,946 in 1906, against \$67,250,714 in 1907. The reduction occurred in shipments to Alaska and Porto Rico, while in those to Hawaii and the Philippines the figures indicate a gain in the last year over 1907. The value of domestic merchandise sent to Alaska in 1908 was, in round terms, \$16,000,000 against \$18,000,000 in 1907; to Porto Rico, \$22,000,000 against \$25,000,000 in 1907; to Hawaii, \$14,500,000 against \$14,000,000 in 1907; and to the Philippines, \$11,500,000 against \$8,500,000 in 1907. The shipments of merchandise from the non-contiguous territories to the United States show an increase of nearly \$14,000,000 over 1907, and a marked gain over any preceding year, amounting to \$88,500,000, of which \$41,500,000 was from Hawaii, chiefly sugar; \$26,000,000 from Porto Rico, chiefly tobacco and fruits; \$11,000,000 from Alaska, chiefly salmon, copper, and furs, and \$10,000,000 from the Philippines, chiefly manila hemp and sugar.

The commerce with Cuba shows a slight reduction in 1908 compared with 1907, owing to the low sugar crop on the island and the consequent falling off in the importations of sugar therefrom, the total quantity imported from Cuba in the fiscal year 1908 being but 2,309,000,000 pounds against 3,236,000,000 pounds in

1907 and the value of \$58,320,000 in 1908 against \$70,637,000 in 1907. The total value of imports from Cuba in 1908 was \$83,284,692 against \$97,441,690 in 1907, and the value of the exports to the Island was \$47,161,306 in 1908 against \$49,305,274 in 1907.

The imports of the United States for the calendar year ending Dec. 31, 1908 were \$1,116,447,681, and the exports were \$1,752,833,247. These figures represent a falling off over the calendar year of 1907 of \$307,000,000 in imports and \$167,000,000 in exports. An analysis made by the Bureau of Statistics of the Department of Commerce and Labor indicates that this falling off is due largely to reduced prices. The importation of foodstuffs dropped from \$305,000,000 in the calendar year 1907 to \$292,000,000 in 1908; crude materials for use in manufacturing from \$464,000,000 to \$360,000,000; manufactures for further use in manufacturing from \$263,000,000 to \$179,000,000; and manufactures ready for consumption from \$379,000,000 to \$276,000,000; while miscellaneous merchandise fell from \$12,000,000 to \$9,000,000.

The pig iron imports for 1908 amounted to \$24,000,000, against \$32,000,000 in 1907, while the quantity imported was practically the same in 1908 as in 1907, being in 1908 \$82,503,000 and in 1907 \$82,549,000. These imports show a valuation of but twenty-three and a third million dollars in 1908 against thirty-nine and a half millions in 1907, a fall of but forty per cent. in value and of but twenty-four per cent. in quantity. On the export side the fall in values is also due in part to lower prices, though probably not to so great an extent as the imports. The value of cotton exported during the year amounted to \$439,000,000, against \$470,000,000 in 1907, while the quantity exported in 1908 was 4,375,000,000 pounds against 4,192,000,000 pounds in the preceding year, a decrease of \$31,000,000 in value, but an increase of 183,000,000 pounds in quantity. The manufactures in which the largest decline occurs are on the export side, and the falling off is apparently partly due to lower prices; the average export price on pig iron having been in December, 1908, \$15.30 per ton, against \$20.28 in December, 1907; and on billets, ingots and blooms \$22.84 per ton in December, 1908, against \$29.32 in December, 1907; while other classes of iron and steel show a decline in export prices in December, 1908, as compared with December, 1907, as do also sole leather, lumber and naval stores.

*Includes linters. †Not including corn oil cake.

INTERNAL COMMERCE. The commercial movements in the field of domestic commerce during the calendar year 1908, as reported by

the Bureau of Statistics of the Department of Commerce and Labor, discloses to some extent the effects of the crisis of October, 1907, and the general depression following the financial disturbance of that month. These effects are most clearly shown by the movements of coal, iron and lumber, the chief raw materials used by the building trades and the railroads. The depression in the building trade continued during the greater part of the year, while the additions during the year to the railroad mileage of the country amounted only to about 3200 miles, a total smaller than for any year since 1897.

The movements of live stock, grain and cotton show more normal totals, partly in response to the heavier export demand. The aggregate receipts of live stock at seven primary markets for the year were 42,731,306 head, which was in excess of the corresponding figures for 1907, which were 40,218,455 head. The combined grain receipts for the calendar year at fourteen primary markets were 747,399,209 bushels, which was considerably below the receipts for 1907, which were 800,824,781 bushels. The decline in the total is due mainly to a loss of about 50,000,000 bushels in the corn receipts, only partially compensated by heavier wheat receipts.

Lumber shipments from the Lake ports during the year were 944,742,000 feet, which was thirty-two per cent. below the total recorded for 1907. This decrease, however, was due as much to the gradual exhaustion of the lumber supply in the territory bordering on the lakes as to the general business depression.

The quantities of coal and coke moved over the leading Eastern coal carrying roads in practically all cases show a decided decrease for the year when compared with the corresponding figures for 1907. The decrease was heavier in the case of coke, which may be said to be primarily a raw material for use in the iron industry. The shipments of coke over eight leading Eastern railways were 16,046,161 tons. The bituminous coal tonnage of the same roads was 90,766,603 tons, which was sixteen per cent. below the preceding year's total.

The effects of the industrial depression were felt least by the anthracite coal trade, the shipments during the year of hard coal from the Eastern producing regions being 64,665,014 gross tons, which was only three per cent. below the unusually large 1907 shipment. Coal operations in other sections of the country, such as Ohio, Illinois and Missouri, show equal if not heavier shrinkages.

Coastwise shipments of coal from New York, Philadelphia, Baltimore, Newport News and Norfolk, during 1908, included 40,507,486 gross tons, as compared with 44,016,113 gross tons reported for the preceding year. Domestic iron ore shipments by lake during the year from Lake Superior and Michigan ports totaled 24,939,185 gross tons, compared with 40,727,972 gross tons reported for the season of 1907. The decrease in the ore shipments corresponds to a curtailment in the output of coke anthracite pig iron during the year. The reduced demand for iron material by the railroads is seen in part from the smaller number of cars and locomotives ordered by American railways during the past two years. There were ordered only 1182 in 1908 as compared with 3482 in 1907 and 5642 in 1906. The partial cessation of building operations in the larger cities of the country which preceded the crisis of October, 1907, was another im-

portant factor in depressing the iron situation. The volume of lake traffic during the 1908 season as measured by domestic shipments of merchandise from various lake ports was 60,518,024 net tons, compared with 83,506,991 in 1907. The heavy decrease in the year's shipments was due mainly to the decrease in the shipments of iron ore.

The vessel movement on the Great Lakes during the year also shows a decrease as compared with figures for 1907. The total departures in the domestic trade numbered 65,624 vessels of 83,378,323 net tons, compared with 73,769 vessels of 99,166,409 tons reported for the calendar year 1907.

SHIPPING AND NAVIGATION. On June 30, 1908, the merchant marine of the United States, including all kinds of documented shipping, numbers 25,425 vessels of 7,365,445 gross tons. On June 30, 1907, it numbered 24,911 vessels of 6,938,794 gross tons. The geographical distribution in 1908 was as follows Atlantic and Gulf ports, 17,241, gross tons, 3,500,932; Porto Rico, 72, gross tons, 5,619; Pacific coast, 3195, gross tons, 943,354; Hawaii, 45, gross tons, 18,960; Northern Lakes, 3172, gross tons, 2,729,169; Western Rivers, 1700, gross tons, 167,411. During the fiscal year 1908, 1,457 vessels of 614,216 gross tons were built and documented as compared with 1,157 vessels of 471,332 gross tons for the fiscal year 1907. Of the total for

1908, 450,017 gross tons were built of steel. This steel construction is by far the largest in the history of shipping construction in the United States.

EDUCATION. According to the report of the Commissioner of Education for the school year ending June, 1907, there were at that date 24,262,936 children of school age in the United States. Of these, 12,225,149 were boys, and 12,037,787 were girls. There were enrolled in the common schools 16,820,386 different pupils of all ages. This was 69.88 per cent. of the school population (5 to 18 years). The average daily attendance in 1906-07 was 70.26 per cent. of the common school enrollment, or 11,817,834. The number of teachers employed by the State school system in 1906-07 was 475,238, of which the male teachers numbered 105,773, or only 23.6 per cent. of the total number. The average monthly salaries of teachers in 1906-07 was \$50.17. The average salary of men in those States making a sex classification was \$56.10, and of women, \$43.67. The total revenues for school purposes, excluding balances from previous years and bond sales, was \$343,602,738. The total expenditure, excluding payments of bonds, was \$330,680,801. See EDUCATION IN THE UNITED STATES; AGRICULTURAL EDUCATION; PROFESSIONAL SCHOOLS.

COINAGE. The following tables indicate the amount and character of the coinage executed in the United States in the calendar years 1907-8:

Denomination	1907		1908	
	Pieces	Value	Pieces	Value
Double eagles	4,832,831	\$96,656,620.00	5,463,160	\$109,263,200.00

Total	\$3,399,116,912	\$306,801,209	\$3,092,315,703	\$3,078,989,298

Population of the United States January 2, 1909, estimated at 88,209,000; circulation per capita, \$35.06.

*For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the treasury, and is not included in the account of money held as assets of the government.

†This statement of money held in the treasury as assets of the government does not include deposits of public money in national bank depositories to the credit of the Treasurer of the United States, amounting to \$112,126,477.57.

For a full statement of assets see Public Debt Statement.

THE NATIONAL DEBT. The amount and classification of the United States national debt at the end of the calendar years 1907 and 1908 were as follows:

	Dec. 31, 1907	Dec. 31, 1908
Interest-bearing debt at from 2 to 4 per cent., and redeemable from 1907 to 1925, inclusive.....	\$898,210,050.00	\$912,900,850.00
Debt on which interest has ceased since maturity..	5,580,386.26	3,448,935.29
Debt bearing no interest.....	399,760,386.38	400,501,382.78
Gross debt	\$1,303,550,821.64	\$1,316,851,168.04
Cash balance	269,519,990.96	169,501,417.34
Net debt	\$1,034,030,830.68	\$1,147,349,750.70

REVENUES AND EXPENDITURES. The following tables, compiled from figures given by the Secretary of the Treasury, shows the total revenues and the total expenditures of the Federal government for the fiscal years 1907 and 1908:

REVENUES

Source	1907	1908
Customs	\$332,233,362.70	\$286,113,130.29
Internal revenue	269,666,772.85	251,711,126.70
Sale of public lands.....	7,878,811.13	9,731,560.23
Miscellaneous sources.....	53,361,387.37	53,570,301.31
Total exclusive of postal revenue	\$663,140,334.05	\$601,126,118.53
Postal revenue	183,585,005.57	191,478,663.41
Total revenue	\$846,725,339.62	\$792,604,781.94

EXPENDITURES

	1907	1908
Civil and miscellaneous..	\$180,244,531.84	\$175,420,408.57
War department	122,576,465.49	175,840,452.99
Navy department	97,128,469.36	118,037,097.15
Indians	15,163,608.41	14,579,755.75
Pensions	139,309,514.31	153,892,467.01
Interest on public debt..	24,481,158.34	21,426,138.21
Total expenditure exclusive of postal.....	\$678,903,747.75	\$659,193,319.68
Postal expenditures	183,585,005.32	191,473,663.41
Total expenditures.....	\$762,488,753.32	\$850,674,983.09
Surplus revenue	\$84,236,586.30	\$58,070,201.15

The revenues and expenditures for the fiscal years ending June 30, 1909, are estimated by the Secretary of the Treasury as below:

REVENUES

Customs.....	\$270,000,000.00
Internal revenue.....	250,000,000.00
Miscellaneous.....	62,000,000.00
Postal revenue.....	206,796,956.00
Total revenue.....	\$788,796,956.00

EXPENDITURES

Civil establishment.....	\$153,000,000.00
Military establishment.....	128,000,000.00
Naval establishment.....	125,000,000.00
Indian service.....	17,000,000.00
Pensions.....	161,000,000.00
Public works.....	90,000,000.00
Interest on public debt.....	22,000,000.00
Postal service.....	206,796,956.00
Total expenditure.....	\$902,796,956.00
Surplus.....	\$114,000,000.00

*Deficit.

ARMY. On July 1, Luke E. Wright, formerly United States Ambassador to Japan, became Secretary of War to succeed William H. Taft, who resigned to become the Republican candidate for President. The report of the Adjutant-General for the fiscal year ending June 30, 1908, shows the authorized strength of the army on that date as 4,120 officers and 71,735 enlisted men in the regular army, including 31 officers and 574 enlisted men in the Porto Rico Regiment, which became a part of the regular army on June 30, 1908; and 166 officers, 5,508 enlisted men in the Philippine Scouts: a total authorized force of 4,286 officers and 77,243 enlisted men. These figures represent an increase of 92 officers and 2,185 enlisted men in the regular army and 50 officers, and 300 enlisted men of the Philippine Scouts over the authorized strength of June 30, 1907. The increase in the authorized number of commissioned officers was the result of an increase in the medical department, directed by act of Congress, and the addition on July 10, 1908, of a number of officers of the Coast Artillery Corps, also in accordance with an act of Congress. The only large increases made during the year in the authorized number of enlisted men were the addition of 960 enlisted men to 96 companies of infantry stationed in the Philippines, and an increase of 300 in the number of Philippine Scouts. The authorized strength of the military establishment on October 15, 1908, was 4,473 officers and 83,251 enlisted men. On October 15, 1908, the actual strength of the military establishment was 4,116 officers, 68,512 enlisted men in the regular army, including 24 officers, 577 enlisted men in the Porto Rico Regiment and 114 officers, 5,424 enlisted men in the Philippine Scouts, making a total of 4,230 officers, and 73,936 enlisted men, not including the enlisted men in the hospital corps. While there was an increase in the authorized enlisted strength of the army there was a much larger increase in the actual strength, which was only 9,315 enlisted men short of the authorized strength on October 15, 1908, as against a deficiency of 20,535 enlisted men on October 15, 1907. The strength of the army by branches of service on October 15, 1908, was as follows: General officers, 21; staff corps and departments, 849 officers, 2,259 enlisted men; engineers, 171 officers, 1,808 enlisted men; cavalry, 760 officers, 12,756 enlisted men; field artillery, 215 officers, 4,777 enlisted men; coast artillery corps, 564 officers, 16,633 enlisted men; infantry, 1,536 officers, 25,405 enlisted men; miscellaneous, 4,874 enlisted men; Philippine Scouts, 114 officers, 5,424 enlisted men.

The geographical distribution of the Army on October 15, 1908, is shown in the following table:

Geographical Distribution	Officers	Enlisted men	Total
In the United States.....	3,016	52,633	55,649
In Alaska	47	1,099	1,146
In the Philippines:			
Regular Army	675	12,093	12,768
Philippine Scouts	114	5,424	5,538
In Porto Rico.....	28	604	632
In Cuba	268	4,853	5,121
In Hawaii	15	254	269
Troops en route and officers at other foreign stations	67	492	559
Total	4,230	77,457	81,687

The foregoing table includes 3,521 enlisted men of the Hospital Corps, distributed as follows: United States, 2,552; Alaska, 44; Philippines, 667; Porto Rico, 21; Cuba, 216; Hawaii, 13; en route, 8. It also includes 187 first lieutenants of the Medical Reserve Corps on active duty.

The total number of enlistments during the fiscal year ending June 30, 1908, exclusive of the Hospital Corps and Philippine Scouts, was 41,463. Of this number 11,743 were reenlistments and 29,720 were original enlistments. The percentage of native born white and colored among the original enlistments was 88. The enlistment was a great increase over the preceding period in 1907, when the total enlistments numbered 20,410, of which 7,384 were reenlistments and 13,026 were original enlistments. In making the enlistments for the army the recruiting officers examined 152,141 men, of whom 109,721, or about 22 per cent. of the whole number, were rejected as lacking in either mental, moral, or physical qualifications. During the fiscal year 1908, 4,388 Filipinos were enlisted for the Philippine Scouts, as compared with 515 for the preceding fiscal year. Of the total number, 1,899 were original enlistments and 2,489 were reenlistments.

There was a very satisfactory falling off in the number of desertions during the fiscal year 1908, the percentage being 4.6 per cent. of the whole number of enlisted men in service as compared with 5.6 per cent. during the preceding fiscal year. This condition is attributed to the re-establishment of the United States Military Prison at Fort Leavenworth, Kansas, early in 1906; more strenuous efforts to apprehend deserters and make their punishment and apprehension a certainty; and changes in the method of making enlistments whereby recruits are enlisted at recruiting depots instead of general recruiting stations. Losses from the army from all causes during the fiscal year were 31,707, of whom 127 were officers and 31,580 were enlisted men. The greater part of these losses among the men was the result of discharge upon expirations of terms of service. The Secretary of War in his annual report notes a steady and progressive improvement in the health of the army. The improvement has been marked in the case of typhoid fever, tuberculosis, and malaria.

The army was engaged in no hostile operations during the year. In the Philippine Islands conditions were generally peaceful and no disturbances of consequence occurred. In the Department of Mindanao there were a few minor cases of lawlessness, but nothing of a serious nature. On October 15, 1908, there were 268 officers and 4,853 enlisted men in Cuba. In addition there were 50 officers and 832 enlisted men

of the Marine Corps serving with the army of Cuban pacification. No occasion arose during the year for resort to force.

The fortification of sea coast defenses, inaugurated in 1886 and proceeding under the plan of the National Coast Defense Board of 1906, was well advanced at the close of the fiscal year 1908. Eighty-five per cent. of the heavy guns and mortars and 72 per cent. of the rapid fire guns, called for under the complete projects, were mounted. The Secretary of War points out the need of additional officers. He recommends the favorable consideration of a bill pending in Congress, providing for the addition of 612 officers to the army. The total expenditures for the Department of War, including civil establishment, military establishment, public works, and miscellaneous, for the fiscal year ending June 30, 1908, were \$130,706,447.99. Of this amount, \$81,203,958.65 was expended on the military establishment. The estimates for the fiscal year ending June 30, 1909, are \$177,926,862.84.

In accordance with the instructions of the Secretary of War, issued to carry into effect orders and suggestions of the President, published May 14, 1908, annual physical examinations for officers were provided, preliminary to a physical test to be made annually to determine the fitness of all field officers of the army for active operations, under regulations to be prescribed by the Secretary of War, in the case of all field officers except those of the coast artillery. This test was the ability to make a daily march of not less than 30 miles for three days in succession under conditions suitable to the making of forced marches in active field operations. These tests were carried on during the year in the various military departments. The endurance riding tests for mounted officers ordered by the President in 1907 were continued at designated places in 1908.

On November 9, the Army War College was formally opened at Washington. This institution is designed to do for the army the same sort of work as is done for naval officers by the Naval War College.

A great deal of attention was attracted during the year by the attempt, finally successful, to place on the retired list Col. Wm. F. Stewart, of the Coast Artillery. As the result of disputes with civilians and others during his command at various posts, Col. Stewart was pronounced by the officials of the War Department temperamentally unfit to command troops. In Sept., 1907, Colonel Stewart was on duty at Fort Barrancas, Fla. He there became involved in a dispute with a civilian employee, and after investigation the general staff of the army recommended that Col. Stewart be asked to apply for retirement. This recommendation was approved by President Roosevelt. The alternative was offered of voluntary retirement or transfer to an ungarrisoned post. Col. Stewart declined to request retirement, unless he should be placed on the retired list as a Brigadier-General. This was refused and Col. Stewart was deprived of command at Fort Barrancas and sent to Fort Grant, Arizona, an ungarrisoned post. After remaining there several months Col. Stewart applied for change of station, and it was decided to send him to St. Francis Barracks, St. Augustine, Fla., but a protest was received from the Florida senators, and Col. Stewart was again sent to Fort Grant. Senator Rayner, of Maryland, of which State Col. Stewart was a native,

denounced the action of the President and the General Staff and introduced a resolution directing the President to convene a court of inquiry and investigate the case. This resolution was referred to the Committee on Military Affairs, which gave it no attention. In August, 1908, Col. Stewart was ordered from Fort Grant to Fort Huachuca in Arizona, to take the physical test for army officers prescribed by President Roosevelt. He was examined by army officers, who reported that his physical condition would not permit him to take the test, although Col. Stewart protested that the prescribed exercise was no more than he had been taking habitually of his own volition. Col. Stewart was then ordered before the retiring board at Washington, which, on October 10, reported that Col. Stewart was suffering from organic heart disease, which rendered him unfit for active service. Secretary Wright approved the report of the board and recommended that the President place Col. Stewart on the retired list for physical disability incident to the service. This was at once done.

A Board of Medical Scientists, who met at the War Department on December 7 to consider the advisability of immunizing soldiers by vaccination, decided that inoculation as a preventive against typhoid fever had been so thoroughly demonstrated in foreign countries that its efficacy was well established, and the Board recommended that the vaccination method be adopted in the United States army.

It was announced early in December that the date of the withdrawal of the troops from Cuba would be January 28, 1909. (See CUBA.)

NAVY. On Nov. 13, Victor H. Metcalf, of California, resigned as Secretary of the Navy, to take effect on December 1, and Truman H. Newberry, of Michigan, for the last three years Assistant Secretary of the Navy, was appointed in his place.

During 1908 the following battleships were accepted preliminarily and placed in commission: *Mississippi*, 13,000 tons; *New Hampshire*, 16,000 tons; *Idaho*, 13,000 tons; armored cruisers: *North Carolina*, 14,500 tons; *Montana*, 14,500 tons; *South Dakota*, 13,080 tons; scout cruisers: *Chester*, *Birmingham*, and *Salem* (all 3,750 tons); submarine vessels: *Octopus*, with a displacement of 274.4 tons, the *Tarantula*, *Cuttlefish*, and *Viper* (all of 170 tons). Of these vessels the armored cruiser *South Dakota*, and the submarine boats *Tarantula*, *Cuttlefish*, and *Viper*, have been accepted finally.

The following table shows the strength of the United States Navy in the number of vessels and tonnage of 1,000 or more tons and of torpedo boats of more than 50 tons on Nov. 1, 1908:

		Tons
Battleships (10,000 tons and over).....	29	406,146
Coast-defense vessels	11	46,334
Armored cruisers	12	167,445
Cruisers above 6,000 tons.....	5	43,800
Cruisers 6,000 to 3,000 tons.....	20	72,620
Cruisers 3,000 to 1,000 tons.....	14	18,058
Torpedo-boat destroyers	31	17,590
Torpedo boats	32	5,615
Submarines	19	3,860
Total	173	770,468

The following battleships were under construction at the end of the fiscal year 1908: *Michigan* and *North Carolina* (16,000 tons); *Delaware* and *North Dakota* (20,000 tons); *Florida* and

Utah (21,825 tons). There were also under construction fifteen torpedo boat destroyers with a total tonnage of 10,920 tons and five fleet colliers with a tonnage of 58,770. Of the vessels under construction, *South Carolina* and *Michigan* were under contract to be completed in December and November, 1908, respectively. Two battleships were authorized by act of Congress May 13, 1908. (See CONGRESS.) These are to be named the *Utah* and the *Florida*. The *Utah* is to be built by the New York Shipbuilding Company at a cost of \$3,946,000 and the vessel is to be completed in thirty-two months from the date of contract. The *Florida* is to be built at the Navy Yard, New York. Bids were opened on Nov. 2, 1908, for the construction of eight submarine torpedo boats, authorized by act of May 13, 1908, but contracts for these bids had not been made at the end of the year.

The personnel of the Navy on November 20, 1908, in active service, was as follows: Flag officers, 27; captains and commanders, 202; other line officers, 876; medical officers, 318; pay officers, 201; other staff officers, 147; midshipmen at sea, 333; midshipmen at Naval Academy, 811; warrant officers, 597; enlisted men, 42,400; marine officers, 267; enlisted marines, 9,579.

The Secretary of the Navy in his annual report strongly recommended the creation of the rank of vice-admiral. In the present naval organization a gap exists between the position of rear-admiral and admiral and therefore one of the rear-admirals of the active list must necessarily be assigned to command of the fleet. Under these conditions this officer finds himself at almost every port of call in an unreasonable position of subordination to foreign naval officers of the rank of vice-admiral. This condition was especially apparent during the cruise of the fleet in the Pacific Ocean. It is recommended that at least two officers of the rank of vice-admiral should be provided. The Secretary of the Navy also recommends changes in the procedure in the cases of summary court martial, especially as regards the provision for forfeiture of pay.

On Nov. 12th an order was signed by President Roosevelt, withdrawing marines from duty on board vessels of the navy. This order was the culmination of a long standing struggle on the part of sea-going officers against the presence of marines on board vessels. By the terms of this executive order the following duties are assigned to the United States marine corps: First, to garrison the different navy yards and naval stations both within and beyond the continental limits of the United States; second, to furnish the first line of the mobile defenses of naval bases and naval stations beyond the continental limits of the United States; third, to man such naval stations and to aid in manning if necessary such other defenses or navy bases and naval stations beyond the continental limits of the United States; fourth, to garrison the Isthmian Canal Zone, Panama; fifth, to furnish such garrisons and expeditionary forces for duty beyond the seas as may be necessary in time of peace.

Preliminary drafts were prepared in November by Secretary Newberry and approved by President Roosevelt, prescribing a walking test for officers of the navy. This test will apply to all line officers below the rank of rear-admiral and all staff officers below the rank of captain. The principal test will be a fifty-mile walk to be

made in three successive days, but officers who prefer may have the option of taking the 90 miles in a three days horseback ride or a bicycle ride of 100 miles in three days. These physical tests will be preceded and followed by a medical examination similar to that in the army. The test will be required of every officer once in every calendar year.

CRITICISM OF THE NAVY. The criticism on the construction of naval vessels and naval organization, begun in 1907 by Henry Reuterdaahl, a marine artist, and taken up by others, was vigorously carried on during 1908. In February, Rear-Admiral Converse issued a statement which was regarded as an official reply to some of the criticisms made by Mr. Reuterdaahl and other writers for the press. Admiral Converse confined himself to problems of construction. He admitted that imperfections existed in the construction of our war ships, but insisted that they exist also in a relatively greater degree in other navies. He affirmed that naval construction is not an exact art, that every new ship should be better than its predecessors, and that the oldest ships in the service should be exempt from the kind of criticism which may justly be applied to ships new or fairly planned. He took up the criticisms in detail and gave dates and figures to sustain the position of the Board of Construction on points attacked. These were chiefly charges that on vessels of the United States navy, the free-board (the distance between deck and water line) was so low as to hamper the efficiency of vessels; that the position of the armor belts was open to serious criticism; and that fleet drill had been impossible hitherto, because the navy had not a complete fleet of two squadrons of eight battleships. Admiral Converse admitted that the ammunition hoists on the ships had been wrongly designed and asserted that improvement had been made or was being made on our ships. Largely as a result of the criticisms noted above, the Senate Naval Committee held hearings in March in which many well known naval officers gave testimony. Rear-Admirals Remy and Goodrich, Commanders Key and Winslow, and Lieutenant White testified that the armor belt in our ships was placed too low or at least that it does not extend high enough. On the other hand, testimony was given by members of the Board of Construction that these defects were not serious. Especially severe strictures had been made by Commander Albert L. Key in an official communication on the design of the battleship *North Dakota*. The "Newport Conference" summoned by President Roosevelt, met on July 22, and navy officers were invited to participate in a free discussion and criticism of the design of the new battleships. While the result of the deliberations did not indicate any radical defects in the new battleships of the United States Navy, yet there were adopted certain important recommendations looking to their improvement. These involved a change in the position of the armored belt, increased protection for steering engines, flues, and other important parts, the higher mounting of the broad-side guns, refrigeration for the magazines, two instead of one fire control mast, the lowering of the smoke stacks and ventilators, and the raising of the foremost of the two after turrets. On Dec. 2, Washington L. Capps, Chief of the Bureau of Construction and Repair in the Navy Department, made in his annual report a vigor-

ous reply to the criticisms. He asserted that the criticisms of Commander Key were made 18 months after formal approval of the design for the battleship and that Commander Key had been for a portion of the time on duty with the General Board and was, in addition, assigned to the shipyard where the *North Dakota* was building on Nov. 25, 1907. He pointed out also that although this officer testified before the Senate Naval Committee he made no reference to the alleged defects in the *North Dakota* design. Mr. Capps stated that the changes recommended in the design of the *North Dakota* as a result of the deliberations of the Newport conference were of a comparatively minor character, and that the action taken by the conference testified to the general excellence of the design of this vessel.

On Feb. 20, a resolution was introduced into the House of Representatives by Representative Lilley, of Connecticut, providing for the appointment of a committee to investigate the alleged lobbying methods of the Electric Boat Company of New Jersey before the House Committee on Naval Affairs. A special committee was appointed to investigate these charges, which, among others, accused the Electric Boat Company of using unfair and dishonest methods in obtaining contracts for submarine boats. After a careful investigation into these charges they were dismissed as being without foundation.

BUREAU REORGANIZATION. The organization of the bureaus of the Naval Department was severely criticised during the year, and on the accession of Secretary Newberry plans were at once begun for the reorganization. On Dec. 21 Mr. Newberry's contemplated plan was made public. This plan increases the membership of the General Board and of the Board of Construction and provides for greater coöperation between the boards. The navy regulations were amended so as to redistribute the work of battleship designing in such a way as to avoid archaic and unbusinesslike methods. The increased membership of the Board of Construction and the personnel of the new board was as follows: Rear-Admiral George A. Converse, retired, president; Rear-Admiral Newton E. Mason, Rear-Admiral William S. Cowles, retired, Chief Constructor Washington L. Capps, Rear-Admiral T. C. McLean, Captain William W. Kimball, Captain Sidney A. Staunton, and Captains I. S. K. Reeves. The new members are: Rear-Admiral McLean, Captain Reeves, Captain Kimball and Captain Staunton. In addition to increasing the members of the Board of Construction, Mr. Newberry amended the naval regulations so that the work of the Board will be enlarged to a considerable degree. He changed the provision which limited the Board to designing and equipping new vessels so that hereafter the Board would perform new duties assigned to it by the Secretary of the Navy.

ATLANTIC FLEET, WORLD CRUISE. The most important event in the United States Navy during 1908 was the practice cruise of the Atlantic fleet of 16 battleships around the world. When it was made known that the fleet was to be sent to the Pacific, there was a great difference of opinion as to the advisability of the transfer. Some critics declared that the relations between the United States and Japan were so strained that Japan would consider it a menace; others assumed that it was a permanent strategic move, and that the fleet would remain

in the Pacific. These critics failed to see that no foreign nation could properly take exception to a practice cruise of American men-of-war along the coasts of the United States, whether in the Atlantic, or in the Pacific, even if both coasts be not continuous. The fleet left Hampton Roads on Dec. 16, 1907, after being reviewed by the President. A flotilla of four destroyers left the same port on Dec. 2, also for the Pacific. The fleet stopped at various South American ports, passed through the Straits of Magellan, and reached San Francisco on schedule time, without a mishap on the way. The continuation of the voyage from San Francisco was due to invitations from Australia, New Zealand, China, and Japan. The fleet left San Francisco on July 7, 1908; Manila, Dec. 1, 1908; and, on Dec. 31, 1908, was on the way from Colombo to Suez; it was to be reviewed by President Roosevelt at Hampton Roads on Feb. 22, 1909. The whole cruise will have lasted one year, two months, and six days; the distance traveled being about 42,227 miles. The ports of five continents were included in the itinerary; and the voyage naturally divided itself into three parts. The first part, from Hampton Roads to San Francisco, was actually 14,441 nautical miles. The second, from San Francisco to Manila by way of the Hawaiian Islands, New Zealand, Australia, and Japan, approximated 16,218 miles. The third, or homeward bound part, from Manila to Hampton Roads, by way of India, the Suez Canal, Mediterranean ports, and Gibraltar, was about 11,568 miles, not including the side calls at Mediterranean ports. The value of this cruise to the Navy was enormous. The fleet not only made all needed repairs; but increased the steaming efficiency through competition in daily consumption of coal. Drills were carried out regularly on the long sea passages; tactical exercises were carried out as time permitted; and even target practice was not omitted. Away from the distractions and attractions of shore leave, home, and navy yards, it enabled officers and men to acquire the sea habit, and inevitably resulted in the development of a strong esprit de corps. And the gain on the administrative side was also great, the solution of the various problems relating to supplies giving valuable data for future reference.

POST OFFICE. The report of the Postmaster General for the fiscal year ending June 30, 1908, shows the total receipts of the Post Office Department for that period as \$191,478,663.41, while the expenditures were \$208,351,886.15, leaving a deficit for the year of \$16,873,222.74. This deficit is the largest in the history of the Post Office Department. The deficit in 1907 was \$6,653,282.17. The great increase in 1908 is due mainly to an increase in the salaries of rural carriers, post office clerks, railway mail clerks, and other employees of the department. Had it not been for these increases the deficit would have been but little larger than that of 1907. The appropriations for the fiscal year 1909 were \$222,960,892, and it is estimated that the deficit at the end of that period will again be over \$16,000,000. As in his report for the fiscal year 1907, the Postmaster General recommends the appointment of a Director of Posts, who shall be a business man of wide experience and who shall hold office during good behavior.

The rural free delivery system continued to develop rapidly during the year. On Nov. 10, 1908, there were in operation 39,516 routes with

a patronage of more than 18,000,000 people. Free delivery is now established on nearly 1,000,000 miles of routes throughout the country. The expenditure for the maintenance of the rural free delivery system for the fiscal year 1908 was \$34,361,463. The Postmaster General advocates the establishment of a limited parcels post composed entirely of rural free delivery routes. He states that this would enable farmers to have small parcels delivered at their gates, to live better, and to obtain more easily the necessities of life. The increased consumption would in turn increase the business of the local merchant and would benefit jobbers by the additional orders transmitted through commercial travelers.

The establishment of postal savings banks is urgently recommended in the Postmaster General's report. He asserts that it would be of the greatest value in localities where there are no savings banks or facilities for depositing money. He says, "It has been estimated that altogether fully half a billion dollars not to-day placed in any bank, due to want of opportunity or lack of confidence, might be put back into circulation through the agency of postal savings banks." This service, he points out, would operate principally in territory not now covered by private enterprise.

New designs for stamps were prepared for engraving during the year. Of these, the one-cent stamps embody the portrait of Franklin and stamps of all other denominations, portraits of Washington. The colors of one- and two-cent stamps will be the same as heretofore, except that the green of the one-cent stamp has been lightened to give a brighter effect. A new special delivery stamp has also been designed to be placed on sale about Jan. 1, 1909.

During the fiscal year 14,119 postmasters were appointed, of whom 2,174 were of the presidential class. The Postmaster General notes a marked improvement in the efficiency of the service due to the policy of retaining postmasters of all grades whose records have been satisfactory. A new salary law went into effect in 1907. Under this law, 15,825 clerks and 19,792 carriers were advanced in salary on July 1, 1907; 1,459 clerks and 1,190 carriers on Oct. 1, 1907; 1,436 clerks and 1,342 carriers on Jan. 1, 1908; and 1,160 clerks and 1,179 carriers on April 1, 1908; the total number of promotions being 19,880 for clerks and 23,503 for carriers. The efficiency of the employees affected has been materially increased as the result of these increases in salary. The free delivery of mails by letter carriers was extended during the year to 92 additional cities. The total number of regular letter carriers in the service on June 30, 1908, was 26,352, a net increase during the year of 1,175. An experiment was tried in Milwaukee with success to collect mail by the use of automobiles. It was found that the same force of collectors could do twice the amount of work under this system as when using horse-drawn vehicles.

On June 30, 1908, the number of railway mail routes in operation was 3,293, with a length of 213,220.47 miles, and an annual travel of 407,799,039.44 miles. The expenditure for railway post office cars for the fiscal year was \$4,681,777.58, being 20.5 per cent. less than the previous year. There were in operation, on June 30, 1908, 508 electric and cable car routes with a length of route of 6,764.77 miles and an annual travel of 11,716,416.26 miles.

ARRIVAL OF THE ATLANTIC BATTLESHIP FLEET AT PORT PHILLIP'S HEADS, MELBOURNE, AUSTRALIA

In 1908 parcels post conventions were negotiated with the Netherlands, to take effect July 1, 1908; with Uruguay, to take effect July 1; Italy, to take effect Aug. 1; France, to take effect Aug. 15; and Austria, to take effect July 1, 1909. The parcels post rate of 20 cents a pound to Bolivia, Ecuador, Chile, and Peru was reduced to 12 cents a pound. The weight of the parcels post mails despatched from the United States was 968,513 pounds, consisting of 350,484 parcels, and the weight of the parcels post mails received was 584,667 pounds, consisting of 200,660 parcels.

Negotiations were concluded during the year with the Postmaster General of Great Britain, resulting in the establishment of the two cents an ounce rate of letter postage between the United States, and the United Kingdom and Germany.

On May 8, 1907, the agreement between Canada and the United States, which provided for the transmission of second class matter originating in either country and addressed for delivery in the other at the same rate as if addressed for domestic delivery was terminated at the instance of the Canadian postal administration. Under the new arrangement which then went into effect, the postage rate applicable to second class matter in each country addressed for delivery in the other, was one cent for each four ounces or fraction thereof, calculated on the bulk weight of each package and prepaid by stamps affixed. This arrangement did not prove satisfactory and the Canadian administration consented to a restoration of the former privileges in so far as newspapers published six days a week were concerned, and daily publications may now be mailed to Canada at the rate of one cent a pound.

On Dec. 1, President Roosevelt issued an order putting all fourth-class postmasters in States north of the Ohio River and east of the Mississippi in the classified service. This order affects more than 15,000 fourth-class postmasters in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, and Michigan. Appointments to these places will be made hereafter on certification by the Civil Service Commission of names of applicants who have passed an examination for qualification.

It was announced on Nov. 27 that Frank H. Hitchcock, formerly First Assistant Postmaster General, and later Chairman of the Republican National Campaign Committee, would serve as Postmaster General in the Cabinet in the administration beginning March 4, 1909.

PENSIONS. The report of the Commissioner of Pensions for the fiscal year ending June 30, 1908, shows 951,687 pensioners on the rolls at the close of the fiscal year. During that period there were added to the roll 38,882 names and 54,366 names of pensioners were dropped, leaving a net loss for the year of 15,684 names. The net decrease in the number of pensions since Jan. 1, 1905, when the highest number attained, 1,004,196, was carried on the rolls, is 52,509, and the decrease in the pension roll during 1908, 50,676, was caused by the death of pensioners. The total number of survivors of the Civil War on the pension rolls on July 30, 1908, was 620,985, as compared with 644,383 on June 30, 1907, a decrease during the year of 23,353. The number dropped on account of death during the year was 34,333. The death rate of the survivors

of the Civil War during the year was slightly in excess of 5 per cent. and the number dropped on account of death was 3,132 greater than during 1907. At the close of the year there were 7,099 original claims of survivors of the Civil War pending in the Bureau of Pensions. This number added to the number of survivors of the War makes a total of 628,084, who either are pensioners, or have claims pending. Under the act of April 19, 1908, all widows of soldiers and sailors who served in the Civil War on the roll under the act of June 27, 1890, were transferred to the pension roll. The total number of widows of soldiers and sailors of the Civil War receiving pensions in 1908 was 75,515. There still remained on the rolls of the Pension Bureau two pensioners of the Revolutionary War, daughters of Revolutionary soldiers. Both are pensioned by special act of Congress. There were 471 widows of soldiers and sailors of the War of 1812, a decrease of 870 as compared with 1907. Of the Indian Wars there were 1,820 survivors and 3,018 widows drawing pensions. There were 2,932 survivors of the War with Mexico, and 6,914 widows drawing pensions. On June 30, 1908, there were 20,548 invalids drawing pensions on account of the War with Spain, 1,145 widows, and 3,096 mothers. In the regular establishment there were on the pension rolls on the same date 11,786 invalids, 2,580 widows. The annual value of the pension roll at the close of the fiscal year was \$159,495,701, as compared with \$140,850,880 at the close of 1907, a gain of \$18,644,821. The annual value was the amount required to pay all pensioners on the roll at the close of the fiscal year for one entire year, should there be no changes in the rates or the number of pensioners during the year. The increase in the annual value of the roll is due to the large number of certificates issued during the year under the Act of Feb. 6, 1907, and the increase in the rates to widows granted by the Act of April 19, 1908. There were disbursed during the year for pensions \$153,093,086.27, as compared with \$138,155,412.46 in 1907. The amount paid in 1908 is the largest since the organization of the Pension Bureau, with the exception of the fiscal year 1893, when the amount was \$156,906,637.94. The total amount paid for pensions since 1866 is \$3,654,663,365.73. It is estimated that the total amount paid for pensions since the foundation of the government was \$3,751,108,809.96. Of this, the sum paid for pensioners of the Civil War was \$3,533,593,025.95. There were pending on June 30, 1908, 123,483 claims for pensions.

The Act of Feb. 6, 1907, granted pensions to persons who served 90 days or more in the military or naval service of the United States during the Civil War or 60 days in the Mexican War, and were honorably discharged, at the following rates: \$12 per month when 62 years of age; \$15 per month when 70 years of age, and \$20 per month when 75 years of age. From the date of its approval to June 30, 1908, there were filed 431,113 applications for pensions or increase of pensions under this act, and 377,192 certificates were issued to applicants. Of these only 11,223 were original allowances for certificates issued to persons who were not already on the pension rolls. The Act of April 19, 1908, referred to above, provides that the rate of pensions for widows, minor children under the age of 16 years, and helpless minors as defined by the existing laws, now on the roll or here-

after to be placed on the pension roll and entitled to receive a less rate than hereinafter provided, shall be \$12 per month. At the time of the approval of this Act there were 202,577 persons who were entitled to benefit by it. During the fiscal year 22,113 applicants were filed under this law and 4,260 certificates were issued.

During the fiscal year 17 original military bounty land warrants were issued, granting 2,640 acres of land. To obtain this bounty applicants must have served at least fourteen days, or in a battle prior to March 3, 1855, and if in the navy or regular army, must have been in some war in which the United States government was engaged. The total number of bounty land warrants issued to the close of the fiscal year was 598,668, embracing 68,788,950 acres of land.

PATENT OFFICE. The number of applications for patents received during the fiscal year ending June 30, 1908, was 58,527. In addition to these there were 1,091 applications for design patents, 207 for reissue patents, making a total of 59,825 applications for patents of all descriptions filed during the fiscal year, an increase over the number filed in the fiscal year 1907 of 2,303. There were 7,467 applications for registration of trade marks, 810 for labels, and 339 for prints, making a total of 8,616, which is a decrease of 657 from the figures of 1907. The number of patents granted during the fiscal year was 34,003, design patents, 741, reissue patents, 151, trade marks, 6,135, labels, 636, and prints, 279, making a total of 41,952. The expired patents which became public property numbered 24,270. The Congress in 1907 included a provision in the executive and judicial appropriation act, providing for a commission to be created to consist of the Secretary of the Interior, the Commissioner of Patents, and the Secretary of the Smithsonian Institution, to determine which of the models of the Patent Office might be of possible benefit to patentees or of historical value, such models thus selected to be cared for in the new National Museum Building and the remainder of the models to be disposed of by gift, sale, or otherwise before Jan. 1, 1909. In accordance with this provision the Commission was organized on May 29, 1908, and steps were immediately taken to carry out the provisions of the act. The Commissioner of Patents reports that all the models, 157,000 in number, have been removed from the Union Building, some of the historical models have been placed on exhibition in the National Museum, and others, which were deemed of importance as evidence in patent litigation, and to aid examiners and searchers, have been placed in the Patent Office part of the Department of the Interior Building until the completion of the new National Museum Building.

NATURALIZATION. The fiscal year 1908 was the first full fiscal year in which the Act of Congress of June 29, 1906, revising the naturalization laws and establishing a Bureau of Immigration and Naturalization, was in effect. It is the duty of this Bureau to provide for use at the various immigrant stations throughout the United States, books of record where the commissioners of immigration shall cause registry to be made in the case of each alien arriving in the United States, with the necessary information concerning him. It is provided also that the commissioner shall cause to be granted

to such aliens a certificate of such registry. He could confer exclusive jurisdiction over naturalized aliens as citizens upon certain courts comprising practically all courts of record in any State or Territory, including Federal courts. The jurisdiction of all such courts extends only to aliens resident within the respective judicial districts of such courts.

The report of the Chief of the Division of Naturalization for the fiscal year ending June 30, 1908, shows that at the various courts authorized for such purpose, 136,725 declarations of intention were filed; 43,878 petitions for naturalization were filed and 25,517 certificates of naturalization were issued. These figures show an increase over nine months of the fiscal year 1907 of 64,041, or 88 per cent. in the number of declarations filed; 23,076, or 11 per cent. in the number of petitions filed; and 17,782, or 230 per cent. in the number of certificates of naturalization issued. In the State courts the number of declarations filed was 87,041 and in the Federal courts, 49,684. In the State courts 31,729 petitions were filed and in the Federal courts, 12,149; in the State courts 17,985 certificates were issued and in the Federal courts, 7,532. The larger part of the naturalization business was done in the States of New York, Pennsylvania, and Massachusetts. These are the States in which the great bulk of the aliens arriving in this country settle. In the States of Iowa and Kansas there was no naturalization of any kind before the Federal courts, while in Rhode Island there were no transactions in the State courts. The chief of the Bureau recommends that courts appropriate a sufficient sum to enable their force of examiners to be employed and organized to investigate every petitioner and his witnesses and to report the result of such investigations before the petition is heard, through the Division of Naturalization, to the appropriate United States Attorney, in order that the latter may prepare to assure the court at the hearing that the government has no objection to offer to the naturalization of the petitioner, or to oppose the granting of the petition upon the specific ground of objection disclosed by the investigation. He recommends also that the government and the petitioner shall have the right of a review by the United States Circuit Court of Appeals of all orders made in naturalization cases by courts of original jurisdiction.

The work of the Bureau of Naturalization during the fiscal year indicates that the new legislation justified its enactment. It is now known definitely how many persons are naturalized annually and how many refused, with the reasons therefor. The government has complete records of naturalization, and thus in the case of destruction of the court records is protected from illegal claims to citizenship, as the person naturalized is protected from the injuries to his personal and property rights which he might otherwise suffer. There has also been secured a means of punishing frauds and of canceling illegal petition certificates, and thus of preventing violations not only of the naturalization laws, but of the immigration, public land, and other Federal statutes.

FEDERAL JUDICIARY. The composition of the United States Supreme Court remained unchanged during 1908, and the present members with their dates of appointments are as follows: Chief Justice Melville W. Fuller, of Illinois.

1888; John M. Harlan, of Kentucky, 1877; David J. Brewer, of Kansas, 1889; Edward D. White, of Louisiana, 1894; Rufus W. Peckham, of New York, 1895; Joseph McKenna, of California, 1898; Oliver W. Holmes, of Massachusetts, 1902; William R. Day, of Ohio, 1903; William H. Moody, of Massachusetts, 1906.

A large number of important decisions were handed down by the Supreme Court during the year. The most significant of these from a popular standpoint were those relating to railroads and trusts, and these will be found noted under the articles TRUSTS; RAILWAYS; BOYCOTTS; INTERJUNCTIONS; AMERICAN FEDERATION OF LABOR; and in the articles on the States in which the decisions particularly apply.

An important decision relating to the privileges and immunities of citizens of each State in other States is that of *Chambers vs. the Baltimore and Ohio R. R.* In this case the widow of a citizen of Pennsylvania sued in Ohio on a right of action given in Pennsylvania for the death of her husband, alleged to have been killed in Pennsylvania by the negligence of the defendant. In accordance with an Ohio statute which gave its courts jurisdiction in case of such action only when the death was that of a citizen of Ohio, the State Supreme Court denied the plaintiff's right. The United States Supreme Court held that the statute was constitutional and did not deprive citizens of other States of the rights accorded to citizens of Ohio. The opinion points out that since the denial of the right in this case did not depend upon the non-citizenship of the plaintiff, there was no discrimination. In the case of *Adair vs. the United States*, section 10 of the Erdmann Act, passed in 1898 in the hope of preventing railway strikes and providing for voluntary arbitration of labor disputes between the interstate carriers and their employees, was declared unconstitutional. This section made it a misdemeanor for an interstate carrier or its agent to dismiss an employee because of his membership in a labor union. Two grounds were given for the decision, first, that the act deprived the plaintiff, an agent of the railway company, of the liberty guaranteed him by the Fifth Amendment to the United States Constitution; second, that the subject of the section bore no such relation to interstate commerce as to warrant congressional regulation. Another decision relating to interstate commerce was in the case of *Loewe vs. Lawlor*, in which the complaint alleged that the plaintiffs, hat manufacturers, had an extensive interstate trade, and that the defendants had effectively combined to interfere with their production by strikes and to boycott dealers in their products in other States. It was held on demurrer that the cause of action was stated under the Sherman anti-trust law. (See *BOYCOTT*.) An important decision was rendered in the case of *Richardson vs. Shaw* in relation to stocks bought on margins. Securities were bought for the speculator on margin under an agreement permitting the broker to pledge the securities carried in his general loans. Within four months of proceedings of bankruptcy against the broker the securities were redeemed by the broker and delivered to the customer on receipt of the balance of account. The trustee in bankruptcy sued the customer, alleging a preference. The verdict was directed to the defendant on the ground that since no relationship of debtor and creditor existed the transfer

was not preferential. In the case of the *Cleveland Railway Company vs. Cleveland Steamship Company*, in which it was alleged that a pier of the plaintiff's bridge was injured by the defendant's vessel, it was held that the admiralty court did not have jurisdiction since the injury was consummated on land. A decision relating to the selling of mining stocks by promoters was handed down in the case of the *Old Dominion Copper Mining and Smelting Company vs. Lewisohn*. In this case, the promoters having designedly issued a few shares of stocks themselves adopted the sale and immediately offered the remainder to the public. The court held that the corporation had no remedy, since all the stockholders for the time being knew the facts and their unanimous act cannot be a fraud upon the corporation.

The Supreme Court on Nov. 16 disposed of the dispute between the States of Washington and Oregon over the boundary between them in the Columbia River by deciding in favor of Oregon. Sand Island, in the middle of the river, was claimed by both States, Washington's claim being based on the fact that the main channel of the river, which was the boundary, had changed from one side of the island to the other. The court, however, held that the original boundary had not been changed by the mere deepening of one of the two channels. This decision will have a distinct bearing on the dispute between the two States over fishery rights on the Columbia River.

Charges were made early in the year against Judge Lebbeus R. Wilfley of the United States Court at Shanghai, China, on the ground that he had exceeded his authority and acted in a tyrannous manner. After investigation by Secretary Root, Judge Wilfley was exonerated of these charges. His report was endorsed by President Roosevelt in a letter in which he concurred in the findings and enthusiastically praised the work which Judge Wilfley had done in his efforts to stamp out vice and crime in Shanghai. In November, suit for libel was brought by Judge Wilfley against the editor of the *China Gazette*, and the trial resulted in the conviction of the editor. Judge Wilfley resigned his office in the latter part of the year.

CENSUS OF 1910. The regular decennial census of the United States will be taken in 1910. A bill providing for this, the thirteenth census, was introduced in the first session of the Sixtieth Congress, but no action was taken in that session and it went over into the second session. This bill, like the law of 1899, limits the enumeration to be taken to four subjects, population, agriculture, manufactures, and mines and quarries, leaving the other decennial inquiries to the interval between the censuses. In this bill, one of the subjects dealt with in 1899, that of deaths in the general population, has been dropped for the reason that the tables thus prepared in the twelfth census were so imperfect as to have very little statistical or medical value. The bill proposes one other subject for inquiry, that of mines and mining. This is done because past experience in the taking of the census shows that the line between manufacturing on the one hand, and mining and quarrying on the other, is one almost impossible for the census office to draw. The proposed bill requires the results of the census to be published by the summer of 1912, and thus prohibits the office from extending its publication into the seventh and

eight year after the census day as had been done at certain previous censuses. One of the most important new features in the draft of this bill is the provision for the almost automatic transfer of the census office from the status closely approaching that of an ordinary bureau, which it maintains during the seven years intervening between the decennial census, to the unusual condition requisite during the three years when the decennial census is being taken. The period from July 1, 1909, to July 1, 1912, is called the decennial census period. During this period the Director of the Census may permit the transfer of persons from the temporary roll of employees, holding the office only during the decennial period, to the permanent force and vice versa. The law proposes to change the census day from June 1 to April 15.

Probably the greatest public interest in the census lay in the question whether or not the additional employees of the bureau, numbering about 4,000, should or should not be chosen under the civil service rules. The Director of the Census was heartily in favor of selecting these employees from the civil service, as was President Roosevelt, who, in a brief special message, to Congress in January, urged that provision be made for bringing the appointment of the clerical force needed for the thirteenth census under regulation of the civil service. The President stated that the non-competitive examination held to select census officers for 1890 and 1900 were used only "as a cloak to hide the nakedness of the spoils system." He says, "They may prevent the most incompetent from being appointed, but they do not secure the appointment of the most competent and they afford no check upon political appointments." He asserted also that the great majority of clerks for the last two censuses were far below the average ability and only about half could pass the competitive examinations under civil service rules. In spite of this, however, a provision was inserted in the proposed bill that the extra clerical force for the census office shall be appointed outside the classified civil service. If this provision is retained the appointment of these special employees will fall to the Representatives and Senators.

The Director of the Census, S. N. D. North, estimated in his annual report, issued in Nov., that the cost of the thirteenth census would be \$12,930,000, which is only \$410,000 more than the cost of the census of 1900. The increase heretofore in the cost of taking the census has been about 50 per cent. from decade to decade. The saving, says Mr. North, will be effected by reason of the existence of a permanent census bureau and the installation of the bureau's own tabulating machines.

CABINET. The only changes in President Roosevelt's Cabinet in 1908 were in the departments of War and Navy. On Jan. 30, William H. Taft resigned as Secretary of War, to become the Republican candidate for President. Luke E. Wright, who was at the time the American Ambassador to Japan, was appointed by President Roosevelt to fill his place. Mr. Wright was a member of the Philippine Commission in 1900-1904 and was appointed civil governor in the latter year, and later Governor-General, serving until 1906, when he was appointed as Ambassador to Japan. In politics he is a Democrat. On Nov. 13, Victor H. Metcalf resigned the portfolio of the Secretary of

the Navy, which he had held since Dec. 17, 1906. He was succeeded by Truman H. Newberry, of Michigan, who was Assistant Secretary of the Navy. The Cabinet at the close of the year was composed as follows: Secretary of State, Elihu Root, of New York; Secretary of War, Luke E. Wright, of Tennessee; Secretary of the Navy, Truman H. Newberry, of Michigan; Postmaster-General, George von L. Meyer, of Massachusetts; Secretary of the Interior, James R. Garfield, of Ohio; Secretary of Agriculture, James H. Wilson, of Iowa; Secretary of Commerce and Labor, Oscar S. Straus, of New York; Attorney General, Charles J. Bonaparte, of Maryland. Mr. Wilson is the member of the Cabinet oldest in service as he held the portfolio of Agriculture under President McKinley.

DIPLOMATIC SERVICE. There were only two changes of the first order of importance in the diplomatic service in 1908. These changes both related to Germany. In the latter part of 1907 it had been announced that Charlemagne Tower, Ambassador to Germany, would resign in the early part of 1908 and would be succeeded by David J. Hill. A few weeks previous to the time when the confirmation of Dr. Hill would come before the Senate, newspaper cablegrams were received from Berlin, announcing in somewhat vague terms that Dr. Hill would not be acceptable to the German government, upon the ground, it was alleged, that he was not a man of sufficient importance to represent the United States in Berlin. This statement aroused great resentment, and the German Ambassador formally conveyed to the American government the assurance of the German Emperor that there had never been any change in his attitude toward Dr. Hill. Dr. Hill's appointment was promptly confirmed by the Senate and he became Ambassador on June 1, when the long-announced resignation of Mr. Tower took effect. Baron Herman Speck von Sternburg, who had been Ambassador from Germany for five years, died at Heidelberg on Aug. 24. Baron von Sternburg rendered distinguished service during his ambassadorship, and by his ability and by his personal characteristics aided greatly in preserving and increasing cordial feeling between the two countries. On Nov. 7 it was announced that Count Johann Heinrich von Bernstorff, the Consul-General of Germany at Cairo, Egypt, would be appointed to succeed Baron von Sternburg as German Ambassador at Washington. Don Enrique C. Creel, Mexican Minister to the United States, resigned the office and on Nov. 14 it was announced that Francisco L. de la Barra, Mexican Minister to the Netherlands, had been appointed to succeed him as Mexican Minister at Washington. On account of the troubles in Turkey (see **TURKEY**), the Turkish Minister, Mehmed Ali Bey, was recalled on Aug. 11. Mundji Bey, the Turkish Consul-General at New York, temporarily assumed the duties of Acting Minister at Washington. On Aug. 15 it was announced that Hussein Kiazim Bey, the representative of Turkey at Bucharest, was appointed Turkish Minister to the United States. Among minor changes was the resignation of Joseph W. J. Lee as Minister to Guatemala, who was succeeded by William Heimke. Two new diplomatic posts in Central America were created by the diplomatic appropriation bill passed at the first session of the Sixtieth Congress. These were Honduras and Nicaragua. John C. Coolidge, of Massachusetts, formerly Secretary of the Em-

COUNT JOHANN HEINRICH VON BERNSTORFF
German Ambassador to the United States

bassy to Mexico, was appointed Minister to Nicaragua, and William B. Sorsby, of Mississippi, formerly Minister to Bolivia, was appointed Minister to Honduras. To fill the vacancy in the post of Bolivia, James F. Stutesman, of Indiana, was appointed Minister. With these promotions and appointments the United States

has a Minister at each of the five Central American republics. Heretofore one Minister has been sent to Costa Rica and Nicaragua, and one to Honduras and Salvador. Below will be found a list of representatives of the United States to foreign countries and a list of representatives accorded to the United States in 1908:

CONSULAR SERVICE. Under a law passed by Congress in April, 1906, reorganizing the Consular Service and making the civil service and the principles embodied in the Civil Service Act of 1893, applicable to it, several important changes were made in 1908. Nearly sixty consular officers were promoted or transferred under its rules. Perhaps the most important of these promotions was that of Robert P. Skinner, of Ohio, from the Consul-Generalship at Marseilles, France, to that of Hamburg, Germany. Horace Lee Washington was transferred from the Consulship at large to the Consulship at Marseilles, and Hector de Castro was transferred from the Consul-Generalship at Rome to that of Zurich. The Consuls-General in the most important cities of the world on Sept. 8, 1908, were as follows: **SOUTH AMERICA:** Buenos Aires, Alban G. Snyder; Rio de Janeiro, George E. Anderson; Val-

paraiso, Alfred A. Winslow; Bogota, Jay White; Callao, Samuel M. Taylor; City of Mexico, Benjamin H. Ridgley; **EUROPE:** Vienna, William G. Rublee; Brussels, Ethelbert Watts; Copenhagen, Frank R. Mowrer; Marseilles, Horace L. Washington; Paris, Frank H. Mason; Berlin, William H. Thackara; Bremen, William T. Fee; Hamburg, Robert P. Skinner; Birmingham, Albert Halstead; Edinburgh, Rufus Fleming; London, Robert J. Wynne; Manchester, Church Howe; Liverpool, John L. Griffiths; Dublin, Albert K. Moe; Glasgow, John M. McCunn; Florence, Jerome A. Quay; Genoa, James K. Smith; Rome, Chapman Coleman; Rotterdam, Soren Listoe; Amsterdam, Henry H. Morgan; Christiania, Henry Bordewich; Lisbon, Louis H. Aymé; Moscow, Hunter Sharp; St. Petersburg, James W. Ragsdale; Madrid, Richard M. Bartleman; Stockholm, Edward L. Adams; Berne,

George Heimrod; Constantinople, Edward H. Ozmun; ASIA: Shanghai, Charles Denby; Yokohama, Henry B. Miller; AFRICA: Cairo, Lewis M. Iddings; Alexandria, David R. Burch; AUSTRALIA: Auckland, William A. Prickett; Melbourne, John F. Jewell; Sydney, John P. Bray; CANADA: Montreal, William H. Bradley; Quebec, William W. Henry.

CONGRESS. The 60th Congress convened its first session on Monday, Dec. 2, 1907, and came to a close on May 30, 1908. The Congress was the largest in the point of numbers that has assembled in the history of the government. Oklahoma's inclusion in the number of States added two Senators and five Representatives. There were therefore 92 Senators as against 90 for the past eleven years, and 392 Representatives as against 386 for the past four years. As the Senators from Oklahoma were Democrats, the two-thirds Republican majority heretofore existing in the Senate was destroyed. In the Senate at the beginning of the session there were 60 Republicans and 31 Democrats. In Jan. an additional Republican Senator was added by the election of George P. Wetmore from Rhode Island. In the House there were 322 Republicans and 169 Democrats. Joseph G. Cannon, of Illinois, was reelected Speaker without opposition, and John Sharp Williams, of Mississippi, was again chosen leader of the minority. The President's message at the beginning of the session included a discussion of all the important matters to be considered by Congress and contained many recommendations and suggestions for new legislation. He discussed at great length the financial condition prevailing as a result of the panic of October and November, and he again urged Congress to pass legislation relating to the regulation of dishonest corporations by Federal law. He recommended also amendments to the Sherman Anti-trust Law. Tariff revision was not urged, the President and the Republican leaders in Congress having previously reached an understanding that it should wait until after the presidential election of 1908. The President expressed the opinion that the income tax and the inheritance tax should be made a part of the Federal system of taxation. He recommended the limitation of the use of injunctions and urged the adoption of adequate liability laws, providing compensation for employees of the government who are injured in the performance of their duties. He discussed at great length the relations between labor and capital and recommended a compulsory investigation of industrial disputes. Among other matters in which he urged action by Congress were internal waterways, the preservation of public lands, a system of postal savings banks, establishment of a National Gallery of Art, creation of a Bureau of Mines, citizenship for Porto Ricans, and some form of local government for Alaska.

The fact that this session of Congress preceded a presidential election gave basis for the general opinion that there would not be a large amount of legislation accomplished. This opinion was reinforced to some extent by the speech of acceptance delivered by Speaker Cannon, who urged the necessity of conservatism in legislation. In spite of this conviction, however, the number of the bills introduced in this session broke all records in the history of the government. They numbered nearly 30,000. Of this number

three-fourths were introduced in the House of Representatives. The Sixtieth Congress, as a result of its refusal to pass much of the legislation urged by President Roosevelt, especially that bearing on labor, won the name of a "Do-nothing Congress." In order to emphasize the importance of passing these and kindred measures, the President, on Jan. 31, sent in a special message in which he urged the passage of the Employers' Liability Act and the limitation of the power of courts to enforce injunctions. The greater part, however, of this remarkable message was devoted to an attack upon several of the larger corporations and to a defense of those measures which had come to be known as the "President's policies." The message was couched in the most vigorous language and its reception in Congress and throughout the country was little less than sensational.

Another message dealing with the same subjects, but much milder in tone, was sent to Congress March 25. In this President Roosevelt asserted that child labor should be prohibited throughout the Union and urged the adoption of a model child labor bill for the District of Columbia. He renewed his recommendation for the immediate enactment of the Employers' Liability Law, drawn to conform to the decisions of the Supreme Court. He recommended also amendments to the Interstate Commerce Law, and especially to the Anti-trust Law. The Interstate Commerce Law he said should be amended so as to give railroads the right to make traffic agreements; the subject of these agreements being approved by the Interstate Commerce Commission and published in all their details. He advised that provision should be made for a permanent Waterways Commission and urged financial legislation. The measures advocated by the President were those which caused the greatest amount of discussion during the session of Congress. Among the measures advocated by him which were passed was the new Employers' Liability Law, so drawn as to meet the objections of unconstitutionality raised by the Supreme Court to the act of the Fifty-ninth Congress. This relates to common carriers doing interstate business and deals with the question of contributory negligence on the part of the employee injured or losing his life. A bill urged by the administration, establishing the right of employees of the government employed in mechanical trades in the District of Columbia, was also passed.

The question of changing the law in reference to injunctions was the cause of one of the greatest contests of the session. The labor unions asked that a law be passed to take them out of the category of corporations that may restrain trade for profit, and also that the "conspiracy" feature in common law be stricken out of the statutes, so far as they relate to unions engaged in strike. A bill prepared by the National Civic Federation, which left the labor unions under the common law and at the same time provided an opportunity for the corporations to obtain immunity from certain features of the Sherman Anti-trust Law, was introduced in both houses, and was supported by President Roosevelt. It was, however, defeated in the committee. The Child Labor Law for the District of Columbia, urged by President Roosevelt, was passed. Congress refused to amend the Sherman Anti-trust Law as desired by the President, and among other recommenda-

tions made by him which failed of enactment were those for Federal inheritance and income tax.

The most important measure passed at this session of Congress was undoubtedly the Emergency Currency Bill, a compromise between the bill introduced in the Senate by Senator Aldrich and the Vreeland Bill, introduced by Representative Vreeland in the House. This measure was accepted by the House on May 27 and was at once signed by the President. Its passage was marked by a notable filibuster, carried on by Senator La Follette, of Wisconsin, with the aid of Senator Stone, of Missouri, and Senator Gore, of Oklahoma. Senator La Follette made a speech lasting eighteen and a half hours. A discussion of this bill will be found in the article CURRENCY.

Among other important measures passed were those modifying the customs law; converting the militia into an integral part of the National military establishment (see MILITIA); authorizing many new public buildings; providing for the construction of two new battleships at a cost of \$6,000,000 each; and for the thorough reorganization of the Consular service; a commission was appointed to represent the United States at the Tokio Exposition in 1912; \$29,227,000 was appropriated for the Panama Canal; and \$10,800,000 of the Chinese indemnity, resulting from the Boxer uprising, was remitted. A law was passed excluding intoxicants and anarchistic and seditious publications from the mails, and a number of important measures were passed affecting public lands. Among important matters left unfinished, either in the form of unpassed bills or as subjects for discussion in committee, were those relating to relations with Venezuela; resolutions in the Brownsville affair; changes in the administrative customs law in accordance with the agreement with Germany; postal savings bank bill; anti-injunction legislation; campaign publicity legislation; and amendments to the Interstate Commerce Law and Naturalization Law.

The Brownsville affair received, as in the Fifty-ninth Congress, a degree of attention out of proportion to its importance. The Senate Committee on Military Affairs, which made an examination into the affair, failed to agree in its report. Two bills were framed for the action of Congress, one the Warner Bill, permitting the President as commander-in-chief to reinstate any of the soldiers who could prove themselves innocent, at the President's discretion, and the other, introduced by Senator Foraker, provided for the restoration by affidavit and made the Post Commander the judge. On a motion made by Senator Foraker himself (see paragraph *Brownsville Incident*), a consideration of this matter was postponed until December.

There was marked opposition in both the House and the Senate to the President's strongly expressed desire for four battleships. A compromise was made, as noted above, by granting two battleships, with the recommendation to future Congresses to provide two each year thereafter. The inquiry by the Senate Naval Committee into the alleged structural defects in the battleships brought about as a result of articles by Henry Reuter Dahl and others, led to no definite results, as the Committee made no report on its findings. A bill was passed increasing the pay of the army and navy, as was also the Widows' Pension Bill, and a measure

to reorganize the Medical Department of the Army.

A bill was passed also increasing the efficiency of the Life Saving Service. The bill providing for the publicity of campaign funds, which was urged by the Democrats in the House, was defeated by finesse on the part of the Republicans, who amended the bill in such a way as to provide for the investigation of the suppression of the negro vote in Southern States. The Democrats voted solidly against it and the effect was to kill the bill. The bill providing a subsidy for mail-carrying steamships on the Pacific was passed in the Senate, but in the House it was defeated, mostly by the votes of Republicans from the Middle West. In spite of the request of President Roosevelt, the Senate refused to appropriate money to make permanent the Inland Waterways Commission, although the House appropriated the \$20,000 asked for. The resolutions authorizing the Ways and Means Committee of the House and the Finance Committee of the Senate to prepare data on which to base a revision of the tariff are discussed more fully in the article TARIFF. As a result of charges made by Representative Lilley, of Connecticut, a special committee of five members of the House was appointed to investigate the conduct of the Electric Boat Company and its predecessor, the Holland Boat Company, respecting the methods employed by these companies in connection with past and present legislation before Congress. Mr. Lilley charged that contracts had been obtained for submarines by these companies by illegal and corrupt means. The evidence taken by this committee did not substantiate these charges and they were dismissed. During the session the Senate ratified 11 conventions proposed by the Hague Peace Conference. (See TREATIES.)

The aggregate of all appropriations made by Congress in this session was \$1,008,804,894, or more than \$88,000,000 in excess of the budget of the previous year. Of this increase \$23,000,000 is chargeable to the navy and \$16,000,000 to the army. Other appropriations were as follows: Sundry civil, \$120,000,000; legislative, executive, and judicial, \$33,000,000; army, \$55,382,000; post office, \$221,765,000; pensions, \$163,000,000; fortifications, \$11,500,000; agriculture, \$11,642,000; District of Columbia, \$11,500,000; diplomatic and consular, \$4,000,000; naval, \$122,662,000; Indian, \$9,000,000; urgent deficiency, \$26,000,000; public buildings, \$25,000,000; general deficiency, \$17,000,000; Military Academy and emigration station at Philadelphia, relief of cyclone sufferers in the South, etc., \$150,000; permanent annual appropriations, \$154,000,000. The largest appropriations in the "Omnibus" Buildings bill were those for the public buildings at San Diego, Cal., \$75,000; Duluth, Minn., \$95,000; Salt Lake City, Utah, \$200,000; Wilmington, Del., \$125,000; Boise, Idaho, \$125,000; Easton, Penn., \$100,000; Plainfield, N. J., \$100,000; Westerly, R. I., \$100,000.

SECOND SESSION. The second session of the Sixtieth Congress began on Dec. 3d. During the recess the Senate lost two of its members by death, William B. Allison, of Iowa, who died Aug. 4th, and Redfield Proctor, of Vermont, who died on March 4th. Albert B. Cummins was elected to fill the place left vacant by Senator Allison, and John Wolcott Stewart was appointed to fill the vacancy caused by Senator Proctor's death. Carroll S. Page was subse-

quently elected to the office by the Vermont Legislature. The death of Senator Allison left vacant the chairmanship of the Committee on Appropriations, which he had filled for many years. Senator Hale, of Maine, was assigned to this chairmanship. President Roosevelt submitted his seventh and last annual message to Congress on Dec. 8. A large part of the message was taken up with a discussion of the relations of labor and capital, particularly with reference to the action of the Federal courts and the liability of employers. He recommended that the Sherman Anti-Trust law be modified to permit large combinations not formed to effect monopolies or against public interests, and that railroads be taken out of the scope of the Sherman Act and placed under the jurisdiction of the Interstate Commerce Commission. He reviewed the financial operations of the government from July 1st, 1901, to Sept. 30th, 1908, and declared that the financial management during that period had shown the most satisfactory results. He recommended that telegraph and telephone companies engaged in interstate commerce should be under the jurisdiction of the Interstate Commerce Commission. Much of the message was taken up with matters relating to Federal courts. The recommendation was made that the salaries of all Federal Judges from the Supreme Court down should be doubled. He expressed the desire that some method should be found of doing away with the law's delay. A considerable sensation was caused by the section of the President's message in which he criticised Congress for passing an amendment at its last session to the clause of the appropriation bill which made provision for the Secret Service. The amendment provided that there should be no detail from the Secret Service and no transfer therefrom. The President in this connection said: "It is not too much to say that this amendment has been of benefit only and could be of benefit only to the criminal classes. If deliberately introduced for the purpose of diminishing the effectiveness of war against crime it could not have been better devised to this end. It forbade the practices that have been followed to a greater or less extent by the executive heads of the various departments for twenty years. . . . These practices have enabled us to discover some of the most outrageous frauds in connection with the acquisition of government lands and government timber by great corporations and by individuals. These practices have enabled us to get some of the facts indispensable in order to secure the conviction of the wealthiest and most formidable criminals with whom the government has to deal. . . . The chief argument in favor of the provision was that the Congressmen do not themselves wish to be investigated by Secret Service men. Very little of such investigation has been done in the past, and it is true that the work of the Secret Service agents was particularly responsible for the indictment and conviction of a Senator and of a Congressman for land frauds in Oregon. I do not believe that it is in the public interest to protect criminals in any branch of the public service, and exactly as we have again and again during the last seven years prosecuted and convicted such criminals who were in the executive branch of the government, so in my belief we should be given ample means to prosecute them if found in the legislative branch. But if this is not considered desirable a special exception could be made in the law prohibiting the use of the Secret Service

force in investigating the members of Congress. It would be far better to do this than to do what actually was done and strive to prevent or hamper effectual action against criminals by a legislative act of the government."

The Senators and Representatives saw in this statement a virtual declaration that Congressmen had restricted the operations of the government Secret Service because they did not themselves wish to be investigated, and great indignation was felt and expressed in both branches of Congress. In the House of Representatives conferences were at once begun by the leaders of both parties to determine what action should be taken. The sentiment was found to be unanimous that the House should in some manner show its resentment to the strictures passed upon its members. In the Senate, too, the President's action caused equal indignation and resentment. On December 16 a general discussion of the action to be taken by the Senate took place. The leaders for both parties placed the matter of redress in the hands of Senator Aldrich of Rhode Island and a resolution, which reads in part as follows, was passed: "Resolved, That that portion of the annual message of the President relating to the Secret Service is hereby referred to the Committee on Appropriations, who are instructed to inquire whether the legislation referred to in the message has impaired the efficiency or sufficiency of the force employed in the Secret Service, and such committee are further directed to ascertain what persons other than those included in the Secret Service were paid from the public treasury during the fiscal year ended June 30, 1908, for services in connection with the enforcement of the laws." The Committee on Appropriations was authorized to hold investigations and to report to the Senate the result of their inquiry and to make such recommendations as they saw fit with reference thereto.

On December 17 a resolution similar in tenor but more specific in statement was passed almost unanimously in the House. After quoting the remarks of the President the resolution read in part as follows: "Whereas, The plain meaning of the above words is that the majority of the Congressmen were in fear of being investigated by Secret Service men and that Congress, as a whole, was actuated by that motive in enacting the provision in question, and whereas that committee appointed to consider this statement of the President and to report to the House cannot find in the hearings before the committee or in the records of the House or Senate any justification of this impeachment of the honor and integrity of the Congress, and whereas that committee would prefer, in order to make an intelligent and comprehensive report, just to the President as well as to Congress, to have all the information which the President may have to communicate, now, therefore, Be it resolved, That the President be requested to transmit to the House any evidence upon which he based his statements . . . and also transmit to the House any evidence connecting any member of the House of Representatives of the Sixtieth Congress of corrupt legislation in his official capacity and to inform the House whether he has instituted proceedings for the punishment of any such individual by the courts or has reported any such alleged delinquencies to the House of Representatives."

Up to the time of the adjournment of Congress for the holidays on December 19, President

Roosevelt had not signified what action, if any, he would take on these resolutions.

Several special messages were sent by the President to Congress. These included a message transmitting the draft of a bill to replace the present law under which the United States could proceed in time of emergency to raise a voluntary army. On December 14 a special message was sent in relation to the Brownsville affair. (See paragraph *Brownsville Incident*.)

Accusations of corruption in connection with the sale of its rights to the Panama Canal by France to the United States, made in certain newspapers, prompted the President to send to Congress on December 15 a special message, emphatically denying such charges and characterizing as libelous and scurrilous the charges and insinuations made. The President placed the chief responsibility for the circulation of these charges upon Joseph Pulitzer, the owner of the *New York World*, and incidentally accused Delavan Smith, editor of the *Indianapolis News*, of being responsible for the circulation of these rumors from the matter obtained from the *New York World*. The President insisted that there had been nothing in the transaction between the United States and France in connection with the Panama Canal which required an investigation. He expressed the opinion that suit for libel of the government should be brought against Mr. Pulitzer, and added that the Attorney General was considering the form that the prosecution should take. The matter published in newspapers relating to this transaction involved Charles P. Taft, half brother of William H. Taft, and Doug-

las Robinson, brother-in-law of President Roosevelt. President Roosevelt was especially emphatic in his declaration that these gentlemen had nothing whatever to do with the payment of money for the Panama Canal. He asserted that while these statements were in part libelous upon individuals, they were in fact wholly, and in form partly, a libel upon the United States government and that the great injury done was in blackening the good name of the American people. He said it should not be left for the private citizen to sue Mr. Pulitzer for libel; he should be prosecuted for libel by the governmental authorities; adding, "In point of encouragement of iniquity, in point of infamy or wrongdoing, there is nothing to choose between a public servant who betrays his trust, a public servant who is guilty of blackmail or theft or financial dishonesty of any kind, and a man guilty as Mr. Joseph Pulitzer has been guilty in this instance." Up to the date of the holiday adjournment no action had been taken by Congress on the recommendations in this message. No action of importance was taken on any message up to the date of the adjournment. The Brownsville incident was discussed by Senator Foraker and Senator Lodge in the Senate and a bill establishing postal savings banks also came up for discussion. Congress adjourned on December 19 until January 4, 1909.

CONGRESSIONAL REPRESENTATION. In the following table is given a list of the Senators serving in the 60th Congress, with an indication of those whose terms expire in 1909 and the dates of election or appointment of the remaining:

Successors to the following Senators will be chosen by the State legislatures in 1909: Allison of Iowa, Republican; Ankeny of Washington, Republican; Brandegee of Connecticut, Republican; Clarke of Arkansas, Democrat; Clay of Georgia, Democrat; Foraker of Ohio, Republican; Fulton of Oregon, Republican; Gallinger of New Hampshire, Republican; Gary of South Carolina, Democrat; Gore of Oklahoma, Democrat; Hansbrough of North Dakota, Republican; Hemenway of Indiana, Republican; Heyburn of Idaho, Republican; Hopkins of Illinois, Republican; Kittredge of South Dakota, Republican; Long of Kansas, Republican; McEnery of Louisiana, Democrat; Milton of Florida, Democrat; Newlands of Nevada, Democrat; Overman of North Carolina, Democrat; Penrose of Pennsylvania, Republican; Perkins of California, Republican; Platt of New York, Republican; Smoot of Utah, Republican; Stephenson of Wisconsin, Republican; Stone of Missouri, Democrat; and Teller of Colorado, Democrat.

By nomination at primary elections, or by the endorsement of party conventions, the following candidates were selected in 1908: A. B. Cummins, Iowa; G. E. Chamberlain, Oregon; Thomas P. Gore, Oklahoma; Martin N. Johnson, North Dakota; Albert J. Hopkins, Illinois; Joseph L. Bristow, Kansas; D. W. Fletcher, Florida; C. J. Hughes, Colorado; Coe I. Crawford, South Dakota; Francis G. Newlands, Nevada; W. J. Stone, Missouri; W. L. Jones, Washington; Isaac Stephenson, Wisconsin. W. P. Dillingham of Vermont was elected in 1908 to succeed himself, and Carroll S. Page was elected to fill out the term of Redfield Proctor, which expires in 1911.

BROWNSVILLE INCIDENT. The agitation resulting from the action of the President in Dec., 1906, in dismissing without honor a battalion of the 25th Infantry (colored) for alleged participation in a riot at Brownsville, Texas, Aug. 13, 1906, which resulted in the death of several citizens and the injury of others, continued in both sessions of the Sixtieth Congress. The Senate Committee on Military Affairs conducted investigations during the latter part of 1907, and on Feb. 25, by a majority of 8 to 4 of its members, adopted a resolution expressing the opinion that the "shooting up" of Brownsville was done by "some of the soldiers" of the 25th United States Infantry. A majority of the Republican members of the Committee present voted against this resolution. Under the terms of the resolution through which the Committee acted, it was not permitted to pass upon the action of President Roosevelt in discharging the negro soldiers without trial. The following resolution was, however, adopted: "That the testimony fails to identify the particular soldier or soldiers participating in the shooting affair of Brownsville, Texas, on the night of Aug. 13, 1906." A bill was introduced into the Senate by Senator Foraker, who was the leader of the element which contended that the action of the President was unwarranted, providing for the restoration to the army of all discharged soldiers and allowing them back pay. On March 19, with the approval of President Roosevelt, Senator Warner, of Missouri, introduced a bill intended to permit the re-enlistment in the army of the former members of the 25th infantry, who were discharged without honor by the President on the ground that

they participated in or were engaged in a "conspiracy of silence" with reference to the shooting affray at Brownsville. The bill authorized the President to permit the re-enlistment of such of the negro soldiers as could establish, to the President's satisfaction, that they were not engaged in and had no guilty knowledge of the affray. Senator Foraker's bill provided that soldiers might re-enlist upon making oath that they were not involved in the affair. On April 14, Senator Foraker spoke in behalf of this resolution. He reviewed the evidence taken in the case by the Senate Committee on Military Affairs and declared that the testimony of alleged eye-witnesses was sufficiently contradictory to show that it was unreliable. He criticised severely the terms of the bill proposed by Senator Warner and asserted that it was without precedent for a legislative body to require men accused of crime to prove their innocence before a hostile judge, who had already adjudged them guilty. On May 13, Senator Foraker's bill came up for action in the Senate, and that body refused by practically a party vote to fix a date for action on the bill. It was finally agreed that it should go over until Dec. 16, and Senator Foraker himself voted in favor of this action.

A decision was made by Judge Hough, of the United States Circuit Court of New York City, on May 15 in a suit brought by Oscar W. Reid, one of the discharged soldiers, in which he held that President Roosevelt had authority to discharge members of the battalion. The action was brought by Reid under an act which allows the government to be sued in certain cases and was to recover the pay and emoluments accruing from the date of his discharge to the end of his enlistment, on the ground that his discharge by the President's order was illegal. Justice Hough decided that the President's right to discharge the soldiers was based on the Articles of War and that such right is explicitly recognized in these articles. The case was appealed to the Supreme Court.

Soon after the convening of the second session of the 60th Congress, on Dec. 14, President Roosevelt sent a message to the Senate on the Brownsville affair, together with a report made by Herbert J. Browne, a detective employed by the government, telling of detective work done under the direction of himself and Captain William G. Baldwin, another detective, with the object of obtaining confessions from former negro soldiers of the 25th infantry. This report contained a detailed account of alleged confessions made to the detectives by members of the battalion who were discharged, and especially by one Boyd Conyers, in which he confessed that he and others whom he named had organized and carried out the raid in order to revenge themselves for real or fancied slights put upon them by citizens of Brownsville. The President affirmed that this report, together with other statements, established clearly that the colored soldiers did the shooting and fixed with tolerable definiteness at least some of those who took part in the shooting at Brownsville. He said that the evidence was incomplete and that further investigations were being carried on. He recommended that a law be passed permitting the Secretary of War within a fixed period to reinstate any soldiers found to have been innocent, who will do all in their power to bring the guilty to justice. After the message had been delivered to the Senate, but before it had

been read, or he had knowledge of its contents, Senator Foraker presented an amendment to his bill for the reinstatement of the discharged negro soldiers, providing that a commission of retired army officers of general rank should be appointed to investigate the Brownsville affair. In presenting his amendment, Senator Foraker read some letters received by him from the soldier, Conyers, mentioned in the message of the President, in which Conyers declared that attempts had been made to intimidate him into making a confession. Browne, the detective, in his report, affirmed that a letter written by Senator Foraker in reply to this had been "extremely obstructive" and that Conyers seemed to regard it as a mandate to adhere to the false story told by him before the Senate Committee on Military Affairs, and as absolving him from any and all obligations to aid in uncovering the truth. The sentence in Senator Foraker's letter to which this statement applies is as follows: "I remember you very well as a witness before the Committee, and I am sure you did not there testify to anything except only the truth."

On Dec. 16 Senator Lodge made a speech in the Senate in defense of the President's action, although he disavowed any responsibility for the information sent by the President to the Senate in the special message transmitting the report of the investigation by Browne and Baldwin. Senator Lodge insisted that Senator Foraker's bill which proposed to compel the President to reinstate the discharged men was an unconstitutional usurpation of executive authority. At Senator Foraker's request, further discussion of the question was put over until after the holiday adjournment. The Senate passed a resolution offered by Senator Foraker, calling on the Secretary of War for information regarding the employment of detectives in connection with the Brownsville affray.

INTERNAL WATERWAYS AND NATIONAL RESOURCES. The Internal Waterways Commission, which was appointed early in 1907 and continued its investigation during the year, made a preliminary report, which, on Feb. 26, President Roosevelt sent to Congress with a special message. Regarding this report, the President says: "The commission finds that it was unregulated railroad competition which prevented or destroyed development of commerce on our inland waterways." The report says that commerce was driven from the Mississippi by the railroads while protection was limited to railroads with their convenient terminals giving quicker and more satisfactory service than the waterways. Later, they prevented the restoration of river traffic, by keeping down their rates along the rivers, recouping themselves by higher rates elsewhere. They also acquired water fronts and terminals to an extent which made water competition impossible. The President recommended that adequate funds should be provided by bond issue, if necessary, to improve the inland waterways so that they should be available to their full capacity. The commission in its report recommended that any plans for improving the inland waterways should take account of the present and prospective relation of rail lines to such waterways, and shall ascertain as far as may be whether such waterways when improved will be effectively used in the face of railway competition, and that the relation between railways and waterways be further examined, with the purpose of devising means

of rendering the two systems complementary and harmonious and making such fair division of traffic that rates and management may be coordinated economically and with benefit to the country. The commission recommended also that Congress be asked to make suitable provision for improving the inland waterways of the United States at a rate commensurate with the needs of the people, as determined by competent authorities. Congress failed to take any action on these recommendations, and it failed further to provide for the continued existence of the Inland Waterways Commission. President Roosevelt therefore continued it by executive act and reappointed the former members.

A unique and important conference on the conservation of national resources was begun in Washington on May 13 when the governors, and representatives from all the States of the Union, met at the invitation of President Roosevelt. Many of the most eminent men in business and politics were in attendance and made addresses. Among the most notable addresses were those delivered by Andrew Carnegie on iron and coal in relation to their exhaustion; Elihu Root, urging the States to exercise their sovereignties in preserving their natural resources; James J. Hill, on the wasteful use of the soil. Other speakers were William J. Bryan, John Mitchell, Governor Glenn of North Carolina, Gifford Pinchot, and James R. Garfield, Secretary of the Interior. A committee was appointed to compile statistics of national resources and consider the matter of further conference, and it was resolved that another should be held in 1909. The President on June 8 appointed a national conservation commission of forty-eight members, representing the various States and Territories, including in its membership several Senators and Representatives in Congress, as well as other prominent men interested in the subject of conservation of the nation's resources. This body met in Washington on Dec. 1 and following days under the presidency of Gifford Pinchot, national forester, to prepare a report to the President for transmission to Congress on the resources of the country. The work was divided into four sections, dealing with water, land, forests and minerals, and a day was given to the discussion of each of these subjects and the compilation of inventories and statistics which had been gathered from government reports and the compilations of statisticians, under direction of the committee. At this meeting a joint committee on coöperation was authorized to be composed of six members of State conservation commissions and three members of the national commission to devise ways and means for coöperative work.

The movement for a waterway along the Atlantic coast found expression in the second annual convention of the Atlantic Deep Waterways Association, held in Baltimore in November. More than 500 delegates were in attendance, representing almost every important commercial organization of the seaboard cities. Addresses were made by Rear-Admiral George W. Melville, John F. Stevens, and others. The Lakes-to-the-Gulf Deep Waterway Association, an organization formed to further the development of the Great Lakes and the Mississippi and its branches, met in Chicago on Oct. 7-9. Addresses were made by William J. Bryan and William H. Taft.

The National Rivers and Harbors Congress, composed of nearly 3,000 delegates from forty-four States and Territories, held sessions in Washington from Dec. 9 to Dec. 12. Addresses were made by William H. Taft, Vice-President Fairbanks, President Ransdell, of the Congress, Andrew Carnegie, Joseph G. Cannon, and others. The congress adopted resolutions commending the conservation of the natural resources of the country, and recommending delay until waterway improvement, which it held to be imperative, was well under way. It was resolved that a committee of five should be appointed to draft a bill for introduction into the House of Representatives providing for a bond issue of \$500,000,000 to carry into effect waterway improvement, the provisions for the issuance of these bonds to be similar to those authorizing the bonds for the construction of the Panama Canal. Congress was urged to complete river and harbor projects calculated to fit into and carry into effective use any large, comprehensive, and connected waterway system that may be subsequently adopted. The creation by statute of a commission to study the waterways of this and foreign countries in order to suggest to Congress plans for the expenditure of the money as recommended. Congress was asked also to double the corps of engineers of the army and to give authority to the corps to formulate and propose to Congress plans and projects for river and harbor improvements.

The International Waterways Commission, composed of members from Canada and from the United States to investigate and report upon the waterways of the boundary line between the United States and Canada, made its report on Jan. 5. The commission submitted a report to the two governments recommending that the government of the United States prohibit the diversion of more than 10,000 cubic feet of water per second from the Chicago drainage canal. The commission also submitted a report to the two governments on the international boundary line in Lake Erie, which was a matter of dispute, and out of which grew the seizure by the Canadian vessel *Vigilant*, in Aug., 1906, of a number of fishing nets placed in the middle of the lake by an American fishing company. The report recommended that the commission be authorized to locate, lay down upon a modern chart, and mark the boundary line through Lake Erie.

TREATIES. The year was notable for the number of arbitration treaties ratified between the United States and foreign countries. During the session of Congress the Senate ratified such treaties with the following countries: France, Italy, Mexico, Switzerland, Norway, Sweden, Denmark, Spain, Portugal, Japan, Great Britain, and Netherlands. These treaties are practically identical in form and the first article in each, which reads as follows, will give an indication of their general content: "Differences may arise of a local nature relating to the interpretation of treaties existing between the two contracting parties and which it may not be possible to settle by diplomacy. It shall be referred to the permanent court of arbitration, established at the Hague by the convention of the 29th of July, 1899, providing, nevertheless, that they do not affect the vital interest, independence or the honor of the two contracting States and do not concern the interests of a third party." The treaty with Great Britain

contained, in addition, the reservation that "any matter affecting the interests of a self-governing dominion of the British Empire, is to obtain the concurrence therein of the government of that dominion." As almost all the difficulties between the United States and Great Britain are the outcome of questions relating to Canada, this clause was taken to be the admission of the right of Canada to concur in any treaties or arrangements made between the United States and Great Britain. The ratification of the treaty with Japan was of especial interest, as it marks the first definite result of the resumption of treaty negotiations which were discontinued in the winter of 1906 on account of the assault of Japanese subjects in San Francisco. It is the first arbitration treaty negotiated between Japan and the United States. Negotiations were carried on during the year with Germany for the conclusion of an arbitration treaty. A treaty of arbitration was also signed on Oct. 1 by Secretary Root and Wu Ting Fang, the Chinese minister. The provisions of the treaty follow those negotiated with the countries mentioned above. The first arbitration treaty between the United States and countries of South America was that signed on Dec. 5 by Secretary Root and Mr. Pardo, the Peruvian minister to the United States. In addition to these arbitration treaties the Senate confirmed the adherence of the United States to the convention adopted by the Pan-American conference at Rio de Janeiro in 1906, providing that when a naturalized citizen returns to his native country for a period of two years, that fact shall constitute a renunciation of the acquired citizenship. This convention was agreed upon by the eighteen countries taking part in the Rio Conference. Two additional treaties were ratified with Great Britain. They refer to the question of the boundary line between the United States and Canada and to the question of fisheries. The boundary treaty provides for a commission to determine the boundary between the United States and Canada. The main features of the fisheries treaty provide for the appointment of a joint high commission consisting of two members for each country, who shall have the power to settle all administrative details and adopt regulations for the fisheries. The convention includes all the inland boundary waters between Passamaquoddy Bay, New Brunswick, and Puget Sound, and remains in force four years, after which time the convention may be abrogated upon one year's notice of either of the contracting parties. The Senate ratified the treaties adopted by the Hague Peace Conference relating to the opening of hostilities; the laws and customs of war on land; rights and duties of neutral powers and persons in case of war on land; the laying of automatic submarine contact mines; the bombardment by naval officers in time of war; the adaptation to naval war of the principle of the Geneva convention; prohibiting the discharge of projectiles and explosives from balloons or by any other methods of a similar nature; and a convention rendering inviolable postal correspondence of neutrals or belligerents on the high seas on board a neutral or an enemy's ship, and exempting from capture fishing vessels and vessels engaged in religious, scientific, or philanthropic missions. The convention signed at the Hague Conference for the settlement of international disputes by arbitration was also ratified by the Senate, as was

CONGRESS FOR THE CONSERVATION OF NATURAL RESOURCES HELD IN WASHINGTON IN 1908

**PRESIDENT ROOSEVELT, VICE-PRESIDENT FAIRBANKS, GOVERNORS OF THE STATES, AND NOTABLE GUESTS
PHOTOGRAPHED AT THE DOORS OF THE WHITE HOUSE**

Seated from left to right: Governor Dawson of West Virginia, Governor Harris of Ohio, Governor Hughes of New York, Governor Davidson of Wisconsin, Andrew Carnegie, William J. Bryan, James J. Hill, John Mitchell, President Roosevelt, Vice President Fairbanks, Justice Harlan, Justice Brewer, Justice McKenna, Justice White, Justice Holmes, Justice Day, Justice Moody, Secretary Cortelyou. The most prominent figure in the background, second from the doorway on the right, is Governor Johnson of Minnesota.

the provision for the establishment of an international prize court and the provision relating to the recovery of contract debts by the employment of force. A tariff agreement was negotiated with France under the authority of the Dingley Tariff Act and went into effect on Feb. 1. The most important feature of the agreement is the abatement of 20 per cent of the duty on champagne imported into the United States. France, in turn, agreed to impose only the minimum rates on Porto Rican coffee and mineral oils. Under the terms of the agreement a board of three experts from each country is to be appointed to investigate and report on the customs administrative systems of both countries. The agreement will remain in force until the President of either country gives notice to the other country, on account of any advance of duty imposed by one country upon the commerce of the other. The commissioners appointed to make preliminary arrangements for the new reciprocity treaty between the two countries held session in France during the year. Extradition treaties were ratified between Spain and the United States, and negotiations were carried on for an extradition treaty between the United States and Honduras.

AGREEMENT WITH JAPAN. Perhaps the most notable diplomatic incident of the year was the agreement between the United States and Japan, which took the form of an exchange of notes between Elihu Root, Secretary of State, and Baron Kogoro Takahira, the Japanese ambassador, dated Dec. 1. This agreement marks the culmination of a plan inspired by Mr. Root over two years ago and is a continuation of the policy toward Japan inaugurated by John Hay in 1900. The agreement is in no way a treaty and is not legally binding between the two countries. Neither does it require any action by the Senate. The text of the agreement follows:

1. It is the wish of the two governments to encourage the free and peaceful development of their commerce on the Pacific Ocean.
2. The policy of both governments, uninfluenced by any aggressive tendencies, is directed to the maintenance of the existing status quo in the region above mentioned and to the defense of the principle of equal opportunity for commerce and industry in China.
3. They are accordingly firmly resolved reciprocally to respect the territorial possessions belonging to each other in said region.
4. They are also determined to preserve the common interests of all powers in China by supporting by all pacific means at their disposal the independence and integrity of China and the principle of equal opportunity for commerce and industry of all nations in that empire.
5. Should any event occur threatening the status quo as above described or the principle of equal opportunity as above defined it remains for the two governments to communicate with each other in order to arrive at an understanding as to what measures they may consider it useful to take.

The intent and purpose of the agreement was made plain in a statement issued by Baron Takahira at the time it was made public. He said:

"As will be seen in their wording, the notes are in the form of a declaration and are not a treaty or agreement. They are simply a reaffirmation of what was declared by the two govern-

ments years ago, or a definition of the understanding already existing. It is, however, to be noted that the notes which are exchanged between governments of great moral standing, as those of the United States and Japan, will have a great importance in the carrying out of their common policy.

"Japan has entire confidence in the great moral strength of the United States government, and that the latter fully trust in the strong good faith of the Japanese government has been amply proved by past experience. In this respect it is something like a transaction between trusted friends and it is sincerely to be hoped that the people of each country will have the same confidence as their own government in respect to the declaration of the other, and in doing so there will be everything to gain and nothing to lose, and friendly intercourse and commercial relations will be fully developed."

It was generally believed by statesmen of both countries that this agreement would be the final solution of the difficulties which had been pending for several years between the two countries.

FOREIGN RELATIONS. The relations of the United States with its immediate neighbors on the north and south were unbrokenly cordial during the year. The two treaties made with Great Britain, noted in the paragraph on *Treaties*, arranged for settlement of the questions pending in regard to inland fisheries and to the boundary between CANADA and the United States. A clause incorporated in the general arbitration treaty with Great Britain, providing that all matters at issue relating to the colonies of Great Britain should be submitted to those colonies for approval, was generally taken to mean that Canada was to have a voice in the settlement of matters relating to her interests, pending, or which should pend, between the United States and Great Britain. Vice-President Fairbanks visited Quebec as a representative of the United States in the celebration of the anniversary of the capture of Quebec by General Wolfe and was most cordially received. A movement to associate Canada with the United States in the preservation and conservation of national resources was begun by action of President Roosevelt late in December, in issuing invitations for representatives of Canada and Mexico to join in a conference to be held at the White House on Feb. 18, 1909. Gifford Pinchot, chief forester, visited Canada as the personal representative of President Roosevelt to carry this invitation to the governor-general and the premier of Canada. During and following the insurrections which took place in MEXICO in July, many of the insurrectionists took refuge in Texas and from there made occasional raids into Mexico. On complaint of the Mexican governor, President Roosevelt took stringent measures to suppress these insurrectionists and 15 persons were arrested on Aug. 10 along the Texas border for violation of the neutrality laws in inciting riots and conspiracies. A valuable tract of coal land, bordering on the Rio Grande river, known as Barroteran, passed from the jurisdiction of Mexico to that of the United States, according to the decision of a commission, which was appointed definitely to settle the dispute which has been in progress for several years.

Threatened trouble between PANAMA and Colombia, arising from seizure of the town of

Jurado by Colombian troops, in the latter part of March, resulted in an appeal by the Republic of Panama to the State Department for aid. Secretary Taft in May visited Panama and had conferences with representatives of the Panamanian and Colombian governments and succeeded in obtaining a tentative agreement between them. Troubles threatened also in the election for the presidency of Panama, due to strife among the different factions, and these, too, were adjusted by Mr. Taft. Representations had been made that there was likely to be great fraud in the elections to be held for the presidency on the 12th of July, and these matters having been brought to the attention of the State department, it was pointed out to the Panamanian government that if such frauds were permitted they would be likely to lead to violence, riot, and insurrection, contrary to the interests of the United States, and that it would then be the duty of the United States to preserve order under the treaty and the Constitution of Panama. As a result of this action, it was arranged that a commission of electoral inquiry should be created with full power to investigate the complaints of all parties, and the United States was given power to join in this inquiry, with ample rights of examining witnesses and making such other investigation as should be necessary. An official declaration was made by Panama that it desired and assured an open, fair and free election. In spite of this arrangement, as the date of the election drew near, the bitterness between the factions grew so intense that danger of a revolution was feared and United States marines were dispatched to the Isthmus to guard against an uprising. The electoral investigation, made as provided above, revealed the fact that reports of irregularities in registration had been greatly exaggerated. The election passed off quietly and the results showed the fulfilment of the assurances of the Panama government that it would be honestly and impartially conducted, and that order would be maintained.

The relations of the United States with the CENTRAL AMERICAN States, with the exception of Honduras, as noted below, were peaceful during the year, although in July there were indications of possible disorders. A conference was held between Acting-Secretary Bacon and several representatives of the Central American republics and notices were issued to these governments that strict neutrality must be observed under penalty of discipline from the United States, and Mexico, which state was a party to the understanding. In the latter part of July, President Davila of HONDURAS suddenly canceled the exequaturs of all the foreign consuls in Ceiba, including that of United States Consul Drew Linard. The charge was made that the consuls were in touch with the revolutionists, who were heading the insurrection against President Davila, under the leadership of General Bonilla, former president of the republic. The State department at once demanded an explanation of the action of the government of Honduras, and President Davila responded by forwarding the decree of expulsion, which set forth that the consuls had been in communication with the insurgent forces that were besieging Ceiba; had advised the surrender of the government forces to the revolutionary army of inferior numbers; and had also greatly exaggerated the strength of the enemy. H. Percival

Dodge, the United States minister to Honduras, investigated the matter and reported that the consuls were blameless; and, acting under instructions of the State department, he presented to the government of President Davila a sharp rejoinder, denying the facts upon which the decree was based. No conclusion of the affair had been reached at the close of the year. Only a few months prior to this had diplomatic relations with Honduras been resumed after a long interruption. The United States gunboat *Maricetta* was stationed on the coast of Honduras during the progress of the revolution, but took no active part.

During the progress of the revolution in HAITI, which resulted in the accession of General Simon to the presidency, American vessels were present off the coast of Haiti to protect the interests of American citizens on the island. On Dec. 17, Secretary Root instructed the American minister at Port Au Prince to notify General Simon that the United States had formally recognized the new government, established by him. This action was taken on receipt of the information that General Simon had been unanimously elected president by the Haitian Congress. The relations of the United States with CUBA were without especial incident during the year and they will be found discussed in the article CUBA.

The only difficulties with the countries of South America were those which the United States shared with European countries in connection with affairs in VENEZUELA. Certain claims had long been pending between the two countries, based chiefly on the asphalt concessions granted to American companies by the Venezuelan government. These claims were those of the New York and Bermudez Company, a branch of the General Asphalt Company; the Orinoco Steamship Company; the Orinoco Corporation; and the United States and Venezuelan Company. Another claim grew from the expulsion from Venezuela of A. F. Jaurett, who had conducted a newspaper in Caracas and had been expelled by President Castro on the ground that he had abetted revolution. Attempts had been made to arrange for an arbitration of these claims, but Venezuela gave a final refusal in July, 1907, on the ground that they were separate and should be arbitrated separately and not as a whole, as Venezuela claimed was proposed by the United States. Secretary Root then proposed that the claims be arbitrated separately, but this proposal was rejected early in March, 1908. On March 20, the High Federal Court of Venezuela handed down a decision from which there was no appeal, against the Manao Company and the Orinoco Company, Limited, American concerns, annulling the concessions under which these companies claimed rights in Venezuela. The claims of these companies were included in the matters in dispute between the two governments.

In response to a request from the United States Senate, the State department on March 25 sent to the Senate the special report of William J. Calhoun on the controversy between the New York and Bermudez Company and the government of Venezuela. This report was made in 1905 at the request of President Roosevelt. Mr. Calhoun at that time made a thorough investigation of the dispute and the conclusions at which he had arrived were as follows: First: that the Venezuelan government was entitled to

the action of forfeiture or cancelation of the Hamilton contract because the Bermudez Company had not performed the obligation assumed by it to explore and exploit natural products of the forest and uncultivated land in the State of Bermudez; second, that the sequestration of the company's property as an incident to the adjudication of the cancelation of the Hamilton contract was not justified; third, that the assessment of damages against the Bermudez Company for the breach of the Hamilton contract was made without the company's having a hearing and without any sufficient evidence of the facts upon which the assessment was based; fourth, that the land titles of the company for which it had actually paid a money consideration to the government were ignored in the sequestration proceedings, and that the continued possession of the property by the government was in contravention thereof. On March 30 the Secretary of State sent to the Senate the correspondence between the United States and the government of President Castro on the subject of the American claims, together with a memorandum reviewing the five claims which had been the cause of the controversy. This correspondence revealed the fact that Secretary Root had made numerous efforts to secure justice for the American claims at the hands of President Castro and in the Venezuelan courts, but that his labors had been in vain. President Castro was charged with ignoring all principles of right and justice and taking away from American citizens rights acquired in accordance with the laws of Venezuela.

Late in June diplomatic relations with Venezuela were practically broken off when Jacob Sleeper, secretary of the legation and chargé d'affaires, was recalled by the United States government. This action resulted from the continued refusal of President Castro to arbitrate the claims at issue. It was said that the action of the United States in severing the diplomatic relations was not intended as a threat, but that under the existing condition of affairs the State department did not care to risk the lives of its diplomatic officers in Venezuela, where the plague was prevalent, and where it was felt that they could serve no useful purpose. This action of the United States government was followed on July 9 by the recalling by President Castro of the Venezuelan chargé d'affaires. This action completed the breach in the diplomatic relations between the United States and Venezuela. When Holland in August prepared to take active coercive measures against Venezuela an understanding was said to have been arrived at between the government of Holland and that of the United States, whereby the latter agreed not to interfere in any action to be taken by Holland, providing that Venezuelan territory was not occupied.

The departure of President Castro for Europe in December, and the sudden bloodless revolution which followed and resulted in the accession of the vice-president, Juan Vincente Gomez, to the presidency, brought an end to the strained relations between the two countries. President Gomez completely reversed the foreign policy of President Castro toward the United States and made known his earnest desire that the matters at issue might be peaceably settled. The attitude of President Gomez was made plain to Secretary Root by the Brazilian ambassador in Washington, with whom the Brazilian minister

at Caracas had communicated. Secretary Root formally requested the Navy Department to send an adequate naval force to Venezuela, and at the same time commissioned William I. Buchanan, former minister to the Panama republic, a diplomatist of long experience in South American politics, to act as special commissioner on the part of the United States in the negotiations for the resumption of friendly relations. The battleship *Maine*, the armored cruiser *North Carolina*, the cruiser *Des Moines*, and the dispatch boat *Dolphin* were ordered to Venezuelan waters. Mr. Buchanan was carried as a passenger on the *North Carolina*, and indications at the close of the year were that peaceful settlement would be made of the troubles pending between the two countries.

The visit of the United States fleet to Rio de Janeiro on its way to the Pacific was accompanied by a remarkable display of enthusiastic welcome, and afforded a sincere indication of the friendship toward the United States felt by the government and people of BRAZIL. Considerable interest was shown in the national exhibition held in Rio de Janeiro during the past summer, and many persons from the United States, attended it. ARGENTINA, CHILE and PERU took advantage of the passage of the United States fleet by their coast to indicate their friendly feelings toward the United States. It is an undoubted fact that this cruise along the shores of the South American republics had a marked influence in cementing the friendly relations which had been so greatly furthered by the visit of Secretary Root to South American countries in 1907.

The most important transactions between the United States and GREAT BRITAIN during the year were included in the negotiation and signing of the treaties indicated above and in the paragraph *Treaties*. The *modus vivendi* regarding the Newfoundland fisheries perfected in 1907, pending arbitration at the Hague conference, was continued by agreement between the United States and Great Britain through 1908. A postal arrangement was made whereby a postal rate of two cents an ounce for letters went into effect on Oct. 1. In addition to the arbitration treaty with FRANCE, mentioned in the paragraph on *Treaties*, the most important event between France and the United States was the announcement on Jan. 28 by President Roosevelt of the conclusion of the reciprocity agreement made between the two countries under the Dingley act. Negotiations were carried on during the summer for a new treaty; on Aug. 14 the completion of the basis of a tariff treaty was laid and on Sept. 1 the commission which had been conducting negotiations completed its work. The appointment of Dr. David J. Hill as minister to GERMANY to succeed Charlemagne Tower, who had resigned in 1907, gave occasion to a great deal of unpleasant newspaper gossip owing to reports alleged to have been received from Berlin that Mr. Hill was not acceptable to the German Emperor, chiefly for personal and social reasons. On the publication of this report the German foreign office issued a statement denying the truth of these assertions. Mr. Hill's nomination was unanimously ratified by the Senate on March 31, and he was received in Berlin with the utmost friendliness. An arrangement was made with Germany on Dec. 1 for a 2-cent postage rate on letters, similar to that concluded with Great Britain, the rate to go into effect on

Jan. 1, 1909. This rate applies only to mails transported directly between ports of the United States and Germany, and not to mails carried by steamships calling at English ports.

On Jan. 14, the United States received from SPAIN \$570,000 in full payment of the principal of the Spanish indemnity claims. These claims were the result of depredations of Spanish privateers upon American commerce and of the war between Spain and the American colonies. On June 16 a new postal convention was concluded with ITALY which comprises special arrangements for the transmission of parcels. The refusal of the American consul at Harbin, Manchuria, to recognize the municipal government established by RUSSIA, gave rise to temporary friction which was allayed by the prompt action of the State Department. The consul refused to recognize any authority in Manchuria except that of China, but it was found on investigation that his objections to full recognition of Russian authority were based rather upon the form upon which the Russian local officials proposed to attain their object than the objects themselves. The American consul, Mr. Fisher, was the only foreign official who supported the protests of China against Russian claims. Secretary Root informed the Russian government that Mr. Fisher's action would be supported. An understanding was arrived at between Secretary Root and Baron Rosen, Russian ambassador, by which the threatened friction was allayed. (See CHINA.) The attempt of the Russian authorities to extradite refugees accused of offenses in Russia gave rise to a great deal of discussion during the year. The most conspicuous of these were the cases of Janoff Pouren and Christian Rudowitz, both of whom had fled to this country after the failure of revolutionary attempts in Russia. Pouren was accused by the Russian authorities of attempted murder, robbery, arson, etc. Hearings were held in extradition proceedings before the United States Commissioner in New York City, and Pouren was found guilty and ordered to be deported. Secretary Root refused the issue of a warrant for extradition and ordered a retrial on the ground that it had not been established that Pouren's offenses were not political. Similar action was taken in the case of Rudowitz. The domestic troubles in TURKEY resulted in the recalling of the Turkish minister, Mehmed Ali Bey, and Mundji Bey, the Turkish consul-general at New York, became temporarily chargé d'affaires. The Turkish Legation was raised to ambassadorship to correspond with similar action recently taken in regard to the American Legation in Turkey.

An arbitration treaty was signed with CHINA on Aug. 8. The action of Congress in voting to reduce by about one-half the indemnity of \$24,440,778 imposed upon China on account of the Boxer disturbances of 1900 was received in China with warmest feelings of gratitude. Tang Shao Yi, governor of Mukden Province, was sent by the Chinese government as special ambassador to express the thanks of China to the United States government. He arrived in San Francisco on Nov. 22. It was announced by the Chinese government that the sum remitted should be used to send Chinese students to the United States, and it was stated that from the year when the return of the indemnity begins, 100 students shall be sent to America every year for four years, so that 400 students may be in America by the fourth year, and from

the fifth year, throughout the period of the indemnity payments, a minimum of 50 students will be sent each year. The matter of raising the American Legation at Peking and the Chinese Legation at Washington to embassies was discussed during the latter part of the year, but no conclusion was reached. The American fleet visited Amoy on its Pacific cruise, and was most cordially received.

Discussions and negotiations were carried on during the year in regard to the difficulties pending between the United States and JAPAN on the question of immigration of Japanese coolies to this country and other matters. These culminated in the agreement with Japan noted in the paragraph above. In spite of the publication of many rumors in the press to the effect that many disagreements were being met with in these negotiations, they were carried on between the two governments with the utmost good feeling and with the evident intention on the part of Japan that the grievances complained of by the United States should be checked by all means within its power. In the latter part of 1907, Secretary Root sent to the Japanese government certain suggestions as a basis for bringing about the amicable settlement of the differences between the two countries. These suggestions were understood to be the result of reports of the Immigration Bureau that in spite of the agreement between Japan and the United States by which Japan was to restrict its coolie immigration to continental America, more Japanese coolies were entering the United States than ever before. The Japanese government on Dec. 31 replied to this note, accepting some of the American suggestions and outlining certain plans by which immigration of laborers might be restricted. It was claimed, however, that the statistics of Japanese immigration presented by the State Department were incorrect. On Jan. 25 a memorandum was submitted by Secretary Root suggesting that the difference between American and Japanese statistics might be the result of frauds practised upon the Japanese government. On Feb. 17 a paper was sent to the American ambassador, Mr. O'Brien, outlining, on the part of Japan, plans for the restriction of immigration and the settlement of all differences existing between the two countries. On March 17 the United States sent its reply, approving the suggestions of Japan for the issuance of future passport regulations for the restriction of Japanese coolie laborers from going to the United States. The Japanese government had already issued a regulation providing that no Japanese coolie laborers should be allowed to leave Japan for Hawaii, except when they had relatives in Hawaii. The cordial feeling between the two countries was shown by the warm invitation extended by the Japanese government to the President, that the American fleet should visit Japan on its cruise in the Pacific. This invitation was accepted and the visiting fleet was received with remarkable demonstrations of friendship. Cablegrams were exchanged between the Mikado and President Roosevelt expressing the pleasure of both that the visit had been made. A general treaty of arbitration was ratified by the two countries as noted in the paragraph on *Treaties* above. Conventions were also signed on May 21 in regard to copyrights and inventions in Japan. On Aug. 15 it was announced that two Japanese poaching vessels had been captured by

the revenue cutter *Bear* near St. Paul's Island, the chief island of the Seal group in the Bering Sea.

The visit of the American fleet, cruising in the Pacific, to AUSTRALIA and NEW ZEALAND resulted in bringing the United States and those countries into closer and more friendly relations than ever before. The fleet was received with the heartiest welcome in all the ports at which visits were made, and no efforts were spared to convince the United States of the friendly feeling that existed in these Pacific dependencies of Great Britain.

UNITED STATES MILITARY ACADEMY. West Point, N. Y., founded in 1802. During the academic year 1907, 106 officers and instructors were on duty at the military academy, including eight professors, two assistant professors, and 83 other commissioned officers. The strength of the corps of cadets as authorized by law is 533. Five foreign cadets, two of whom were from Costa Rica, two from China, and one from Venezuela, received instruction in addition to 417 cadets borne on the rolls of the Academy. The class graduated Feb. 14, 1908, numbered 108 cadets; 32 were discharged for deficiency in study, four for physical disability, 16 resigned, and two were dismissed. For the examinations for admission, held in January and February, 1908, 461 candidates were appointed, including principals and alternates, and also five former cadets. Of these 127 qualified and were admitted in March. The superintendent called attention in his annual report to the large and increasing number of appointees who failed to report and to the fact that the corps of cadets contained 116 vacancies, especially in view of the fact that educated officers for the United States army were in great demand. Satisfactory discipline was maintained during the academic year until July 4th, when breaches of discipline developed, resulting in the dismissal of two first-class men and the suspension for one year of six third-class men, with the effect that the usual high standard was maintained. For military administration the corps of cadets was changed to a two-battalion organization, and this step was rendered necessary also by the occupation of the new barracks and the increased size of the corps. Practical instruction was given to the first-class cadets at the Watervliet Arsenal, and at Fort H. G. Wright, and a new six-inch battery for coast defense was installed at the Academy. A provisional department of English History was established at the Academy and Professor John Chester Adams of Yale University was appointed as acting professor. The following buildings were in course of construction or under contract during the year: Post Headquarters Building; North Bachelor Quarters; Gymnasium; Battalion Guardhouse; Chaplain's Quarters and Chapel; four double sets of officers' quarters. The next buildings to be erected are the Riding Hall, the north wing of the North Cadet Barracks, and one triple set of officers' quarters. By Act of Congress approved May 28, 1908, the Board of Visitors to the Military Academy was made to consist of five members of the Committee on Military Affairs of the Senate, and seven members of the Committee on Military Affairs of the House of Representatives, to be appointed by the respective chairmen instead of a Board

of distinguished citizens appointed by the President, Vice-President, and the Speaker of the House of Representatives. The Board of 1908 appointed by the President, being superseded by this Act, had no official existence, but nevertheless acted in such capacity and submitted an informal report to the President. This innovation failed to receive the approval of the Superintendent of the Military Academy. During the year Mrs. Margaret Olivia Sage purchased Constitution Island and became with Miss Anna Bartlett Warner a joint donor of this land to the United States for the use of the Military Academy. Col H. L. Scott is superintendent.

UNITED STATES NAVAL ACADEMY. Annapolis, Md., founded in 1845. The attendance in 1907-08 was 854; in the autumn of 1908, 811. Candidates and alternates to fill vacancies in the Naval Academy are nominated upon the recommendation of a senator, representative, or delegate in Congress, such recommendation being made by the fourth day of March of the year following that in which notice is given by the Secretary of the Navy of a vacancy existing at the Naval Academy. If recommendation is not made by this date the Secretary of the Navy is authorized to fill the vacancy by the appointment of an actual resident of the State congressional district or territory in which the vacancy exists. During the year further progress was made with the new buildings for the Naval Academy and a number of these are now complete. Tuition at the academy is free, and students are allowed \$600 annually by the government for living expenses. Captain C. J. Badger, U. S. N., is superintendent.

UNIVERSALISTS. A religious denomination, whose distinctive tenet is the salvation finally of all men. The first church in the United States was established at Gloucester, Mass., in 1799. The church numbered in 1908 53,158 communicants, 925 parishes, and 724 ministers. The Sunday schools had a membership of 45,574. The parish property was valued at \$10,492,509, and the parish expenses and contributions for the year amounted to \$1,127,773.77. The permanent funds of the General Convention amounted to \$387,251, and of all the conventions, \$952,978. Foreign missions are sustained in Japan and domestic missions are actively carried on in ten States. The educational institutions under the auspices of the denomination include Tufts College at Medford, Mass.; St. Lawrence University at Canton, N. Y.; Buchtel College at Akron, Ohio; and Lombard College at Galesburg, Ill.; together with Dean Academy, Franklin, Mass.; Westbrook Seminary, Deering, Me., and Goddard Seminary, Barre, Vt. The next session of the General Convention will be held in Detroit, Mich., in October, 1909.

UNIVERSITIES, AMERICAN ASSOCIATION OF. See ASSOCIATION OF AMERICAN UNIVERSITIES.

UNIVERSITIES AND COLLEGES. Seven American universities registered more than 4,000 students in 1908: Columbia, 5,675; Harvard, 5,342; Michigan, 5,188; Chicago, 4,700; Minnesota, 4,687; Pennsylvania, 4,555; and Illinois, 4,400. The figures for 1907 were: Harvard, 5,346; Columbia, 5,197; Michigan, 4,953; Chicago, 4,594; Cornell, 4,293; Minnesota, 4,207; Illinois, 4,172; and Pennsylvania, 4,134. Six institutions—Chicago, Columbia, Harvard, Mich-

igan, Wisconsin, and Indiana—registered more than 1,000 students in the summer session of 1908. In general there were more men than women at Eastern universities, more women than men at those in the West. All of the Eastern colleges for women, except Bryn Mawr, gained in numbers. Harvard continued to have the largest number of academic, Cornell of scientific, and Columbia of graduate students. The largest schools of education and of pharmacy were at Columbia, of law and of commerce at New York University, of medicine and of dentistry at Pennsylvania, of architecture at Illinois, of agriculture at Minnesota. The Eastern universities continued to gain in their representation from all parts of the country, the Western institutions, except Michigan, being much more local. Columbia had the most widely distributed representation for the United States, Pennsylvania the largest foreign representation (245), Cornell the largest representation from our insular possessions (32). The number of foreign students in the United States, especially those from the Orient, continued to increase, particularly in the professional schools; and the Chinese government announced its intention to spend the remitted Boxer indemnity in sending one hundred students here annually. There were only 252 American students in Germany in 1908, the number of such students in Europe continuing to decrease, except for the American Rhodes scholars. The first group of these returned in 1908 after having acquitted themselves more than creditably during their three years at Oxford. The annual interchange of professors between American and European institutions was extended from Germany and France to Scandinavia.

THE CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING extended its provision of professional pensions to sixty universities and colleges, including State institutions for the first time, the funds of the Foundation being increased from \$10,000,000 to \$15,000,000 for that purpose. The Foundation published in March elaborate tables of information concerning the one hundred and three universities and colleges which spent more than \$40,000 annually for instruction, and of fifty-four other institutions which were believed to obtain worthy results. Many of the institutions not in these lists the Foundation believed to be unnecessary. Six universities spent annually more than half a million dollars for instruction: Cornell, \$510,000; Yale, \$524,000; Michigan, \$536,000; Chicago, \$699,000; Harvard, \$841,000; and Columbia, \$1,145,000. But the average salary of a full professor, even in the one hundred best institutions, was but \$2,500. Only five institutions paid an average salary of more than \$3,500: Chicago, \$3,600; Leland Stanford, \$4,000; Columbia, \$4,298; Harvard, \$4,403; and the College of the City of New York, \$4,788. In general the endowed universities paid higher salaries than the State institutions; the denominational colleges paid least. In general the Foundation criticised the tendencies to multiply institutions, to expand curricula, and to overvalue material equipment.

THE GENERAL EDUCATION BOARD, which was founded in 1902 and endowed with a capital of \$43,000,000 provided by John D. Rockefeller, appropriated by 1908 about \$2,500,000 to colleges, chiefly denominational, under conditions that secured to them a total of four times that amount. Some \$700,000 was also appropriated for further-

ing high, elementary, rural, and colored schools in the Southern States.

THE ASSOCIATION OF AMERICAN UNIVERSITIES and the NATIONAL ASSOCIATION OF STATE UNIVERSITIES agreed during the year that the ideal university should maintain a worthy graduate school and require two years of college work for admission to its professional school. Graduate work developed steadily, 386 degrees of doctor of philosophy being granted in 1908, as compared with 236 in 1898, the average annual number of doctorates granted during that period being Johns Hopkins, 30; Yale, 31; Columbia, 32; Harvard, 33; and Chicago, 35. Illinois is now in annual receipt of \$50,000 for graduate work, the first specific State grant for that purpose. Columbia inaugurated a movement toward the concentration of highly specialized graduate courses.

There was much activity in university professional schools during 1908. In agriculture Chicago established a three years' graduate course, several universities successfully conducted short winter courses for farmers, and Cornell sent throughout the state a special train bearing agricultural lecturers and exhibits. Harvard successfully inaugurated its graduate school for business training, and Yale announced similar instruction in banking, insurance, corporations, and commercial law. There are now four university schools of ceramics and more of forestry. The facilities for the study of law are increasing even more rapidly than the demand for them. In medicine more universities and more State boards approved a combined academic and medical course of six years, and Harvard made the notable innovation of announcing an extended series of free public lectures on medical subjects. The Massachusetts Institute of Technology developed the first graduate work in its field. In theology the tendency toward university affiliation was emphasized by the removal of Andover Theological Seminary to Harvard and of Union Theological Seminary to new buildings adjoining Columbia. Theology still has, however, only one-half as many students as law and one-fourth as many as medicine, although its investment in buildings and endowments is twice that of medicine and ten times that of law. In fine arts an affiliation became effective between Columbia and the National Academy of Design, and several universities enlarged their offerings in music.

Changes in administration were marked during 1908. The resignations of Presidents Eliot of Harvard, Angell of Michigan, Northrop of Minnesota, and of Chancellor Andrews of Nebraska, occasioned considerable comment concerning the great responsibilities of the university president—public, financial, administrative, educational, and personal—and there were some pleas for their reduction. The apparently arbitrary action of some boards of trustees gave rise to suggestions for the reduction of their powers. Cornell followed the plan of Harvard. Yale, and Columbia in relieving its president by creating the office of secretary of the university; the trustees of Leland Stanford ruled that no professor could be dismissed without their consent; the faculty of the Massachusetts Institute of Technology recommended some advisory relation between faculties and trustees; and representatives of ten New England colleges met to consider general problems of administration. FOUR PRESIDENTS OF IMPORTANT EDUCATIONAL INSTITUTIONS ELECTED IN 1908

the election of new presidents a number of professors were chosen—Professor MacLaurin of Columbia, by Massachusetts Institute of Technology, Professor Hill of Cornell by Missouri, Professor Garfield of Princeton by Williams, Wesleyan, De Pauw, and the Woman's College of Baltimore followed the older custom of choosing clergymen.

Among the colleges Dickinson held its 125th anniversary, honoring its founders, John Dickinson and Benjamin Rush, and its graduates, President James Buchanan, and Chief Justice Roger Taney. Oberlin celebrated its 75th anniversary and its being the first American institution to grant degrees to women. Haverford also celebrated its 75th anniversary with an exhibit of literary work done by alumni. The emphasis of the Carnegie Foundation has now generally established an entrance requirement of at least fourteen units each representing one period of High School work daily throughout one year. In general, also, the colleges are moving toward a curriculum of two years of prescribed work followed by two years of elective. University colleges generally hold that in the latter, utilitarian and cultural ends are not incompatible, but most of the independent colleges continued to hold rather to their ideal of broad, non-technical instruction for mental and moral training and for citizenship. Princeton's preceptorial system has now influenced almost every other institution to establish closer relations between professor and student, and to give greater attention to method in instructing undergraduates. There continued also, perhaps from the same source, a tendency to restrict such student distractions as athletics, clubs, and theatricals, either by direct regulation or by the substitution of residence quadrangles, commons and student unions. A dozen deaths and some three hundred serious injuries were attributed to college football in 1908, and the objections that college athletics as at present conducted conduce neither to health nor scholarship were renewed, but there was no extension of the action of two years ago when California and Leland Stanford adopted the Rugby game, and Columbia abolished intercollegiate football. Public attention was claimed by half a dozen conspicuous instances of student disorder during 1908, but faculty discipline was maintained and several student bodies formally announce their disapproval of such disorder as unsatisfactory in itself, and as bringing discredit upon their institutions and upon student life in general. The same attitude has practically abolished anything like systematic hazing in institutions of the better sort.

At the death of ex-President Grover Cleveland he was instanced by Princeton as an ideal type of a wise and devoted university trustee. The death of ex-President Gilman of Johns Hopkins recalled his services in developing university research, and that of President Hall of Union Seminary his liberalization of theological education. The passing of numerous professors also recalled their distinguished services to scholarship—Professors Norton of Harvard in letters, Bourne of Yale in history, Young of Princeton in astronomy, Brooks of Johns Hopkins in zoölogy, Knapp of Chicago in Spanish, and Nelson of Williams in politics.

The most conspicuous books on higher education during 1908 were: *University Administra-*

tion, by President Charles W. Eliot; *Which College for the Boy?* by John Corbin; *The American College*, by Abraham Flexner; and the life of Alice Freeman Palmer, by George Herbert Palmer.

See also articles on the different universities and colleges.

UPPER AIR. See METEOROLOGY.

UPPER SENEGAL-NIGER. A French colony in West Africa, formed in 1904 out of the Territories of Senegambia and the Niger, minus the former Senegal protectorate, which was re-joined to Senegal. In 1907 certain districts were taken from the colony of Dahomey and added to this colony. The colony comprises the vast hinterland of West Africa, and has no seacoast. It includes two-thirds of the course of the Niger, the valley of the Upper Senegal, and the Sahara northward to the Southern Territories of Algeria. It is the most extensive French colony in West Africa, its area being estimated at over 370,000 square miles, and the population at 8,000,000. The capital is Bamako on the Niger. The entire colony is administered by a Lieutenant-Governor who is under the Governor-General of French West Africa (q. v.). Civil administration prevails throughout, except in the Military Territory of the Niger, which is under a colonel subordinate to the Lieutenant-Governor, and is divided into the districts of Timbuktu and Zinder, each under a lieutenant-colonel. The budget of the Military Territory is distinct from that of the colony. The exports and imports of the colony are included in those of Senegal (q. v.), through whose ports they pass. The Senegal-Niger Railway, 343 miles long, connects Kayes, in Senegal, with Koulikoro, in Upper Senegal-Niger. Small steamboats sail up the Niger from Koulikoro to Timbuktu. Roads and telegraphs connect all important centres.

URUGUAY, officially styled **REPUBLICA ORIENTAL DEL URUGUAY**. The smallest republic of South America, covering an area of about 72,000 square miles. In 1908 the population numbered 1,039,078, against 915,647 (198,154 foreigners) in 1900. Montevideo, the capital, had 312,946 inhabitants on June 30th, 1908. In 1906 there were 6,170 marriages, 31,417 births (8,955, or 27.5 per cent., illegitimate), and 15,083 deaths. In the same year there were 9,177 immigrants, and 6,152 emigrants. Among the immigrants were 3,388 Spaniards, 3,178 Italians, and the remainder Brazilians, French, Germans, English, etc.

EDUCATION. About 45 per cent. of the population over six years of age were illiterate in 1900. Primary education is obligatory. In 1906 there were 619 public primary schools, with 1,218 teachers and 57,638 pupils, and 289 private primary schools, with 805 teachers and 17,242 pupils. There are 150 night schools for adults. Lyceums, or schools of secondary education, have been started in each of the 17 departmental capitals; each school has a director and three teachers. At Montevideo the secondary schools have about 2,600 pupils. A school of arts and trades is supported by the State. Other schools at Montevideo include normal schools, a military college, a national agricultural college, and the national university.

PRODUCTION. Only 21.2 per cent. of the total area is under cultivation. The area and yield

of the principal crops in 1907-8 are shown in the following:

	Hectares	Tons.
Wheat	247,606	202,208
Linseed	25,680	18,372
Oats	3,509	3,467
Barley	2,007	1,889
Canary seed	298	223
Maize *.....	212,154	136,136

* 1906-7.

In 1905-6 there were 1,453 vineyards, covering 4,259 hectares, containing 14,050,214 fruit-bearing vines, and yielding 21,472,773 kilos of grapes. The wine production amounted to 10,494,247 liters. The principal source of wealth is live stock, of which the Rural Society of Uruguay gave in 1908 the following estimates: Cattle, 8,000,000; sheep, 20,000,000; horses, 561,000; mules, 23,000; hogs, 94,000; goats, 21,000. The number of cattle slaughtered in the year ending Oct. 1st, 1908, was 954,120, against 1,193,500 in 1906-7, and 1,182,470 in 1905-6. The export of ox hides in 1907-8 numbered 1,717,536; horse hides, 21,724; sheepskins, 13,715. None of these items vary markedly from earlier years but the export of tallow showed a marked increase. The export of wool in 1907-8 amounted to 95,401 bales, against 82,405 and 75,792 bales, respectively, for the two preceding years. The mineral resources, supposed to be great, have thus far been neglected. There are granite quarries in various parts of the country. The Cunapiro mines, in the department of Rivera, owned by a French syndicate, yielded 117,917 grams of gold in 1907.

FOREIGN COMMERCE. In 1907 the total imports amounted to 34,425,205 gold pesos (1 gold peso equals \$1.034) and the total exports to 35,150,937, against 34,454,915 and 33,402,024 gold pesos respectively for 1906. Of the total imports of 1907, 31,930,324 pesos passed through the port of Montevideo, and of the total exports, 25,388,643. The principal imports in 1906 were, in gold pesos: Foodstuffs, 6,691,377; textiles and apparel, 8,324,493; raw and manufactured materials, 11,095,305; drinks, 1,808,642. The principal exports in 1906 were, in gold pesos: Live stock, 1,099,001; animal products, 30,495,990; agricultural products, 481,924; mineral products, 794,563. To the total imports in 1906 Great Britain contributed 28.3 per cent.; France, 11.6; Germany, 15.8; the United States, over 9 per cent. Of the total exports Great Britain took 5.4 per cent.; France, 21.8; Germany, 12.8; the United States, nearly 6 per cent. According to United States returns for the fiscal year 1907-08, imports from Uruguay amounted to \$1,364,796, and exports to Uruguay, \$3,868,661.

COMMUNICATIONS. In 1906 the railway system had a length of 1,217 miles, all in British hands. There are about 2,240 miles of national, and 3,100 miles of departmental roads. There are about 5,000 miles of telegraph line. River transportation is developing. A regular steamer service is now maintained on the Rio Negro, a tributary of the Uruguay, from its mouth to its confluence with the Rio Tacuarembó, some 144 miles. The latter river was made navigable in 1907 for about 72 miles farther into the interior. These routes will open up an almost virgin territory,

comprising about one-fifth of the total area of the republic and reported to be especially suitable for the cultivation of cotton, tobacco, and other sub-tropical and tropical products. In 1906 the ports of the republic were entered by 14,623 vessels, of 11,004,328 tons, and cleared by 14,388 vessels of 10,854,035 tons. Over two-thirds of the tonnage was in the foreign trade. Montevideo is visited by 20 lines of steamers, 3 lines of steamers plying regularly between this port and Buenos Ayres. The Uruguayan merchant marine (of 100 tons and over) consisted in 1907 of 33 steamers, of 23,508 net tons, and 28 sailing vessels of 19,301 net tons.

BANKS AND MONEY. The Bank of the Republic, the only note-issuing bank, has a nominal capital of 12,000,000 pesos and a paid-up capital of 6,000,000 pesos. Its officials are appointed by the government. On Dec. 31, 1907, its note issue amounted to 13,084,056 pesos. There are 4 British banks, as well as German, Argentine, French, Italian, and Uruguayan banks. The monetary unit is the gold peso (equals \$1.034), but no gold coins have been issued. The silver coins are the peso and its subdivisions. There are also some bronze coins.

FINANCE. The total revenue for the fiscal year 1906-07 was 26,159,411 pesos. The customs receipts for 1907-08 were 13,365,525 pesos, against 12,965,729 in 1906-07. The budget for 1907-08 estimated the total revenue at 20,302,000 pesos and the expenditure at 20,257,462. About one-half the revenue is derived from customs, and about one-half the expenditure is for "national obligations," in which are included the service of the national debt and railway guarantees. The national debt on Jan. 1, 1908, was 128,138,917 pesos.

ARMY AND NAVY. The military forces consist of the active or regular army and the National Guard. The active army is recruited by voluntary enlistments, for terms varying in the different branches from 2 to 5 years. The peace strength of the active army was 280 officers and 5,283 men in 1907.

Service in the National Guard is universal and compulsory, and is divided into 3 bans; the first ban consists of all men fit for military duty between the ages of 17 and 30, and numbers about 15,000; the second ban is a provincial organization consisting of all between 30 and 45 years of age; the third is the territorial army and includes all men between 45 and 60 years of age. The total strength of the National Guard is about 35,000. The field army has a strength of about 30,000 men, not including the 3,834 men of the police force. The navy at the beginning of 1908 consisted of 3 gunboats, aggregating 900 tons, with about 200 officers and men.

GOVERNMENT. The President in 1908 was Dr. Claudio Williman, whose term of office is March 1, 1907—Feb. 28, 1911. In the intervals between sessions of Congress there is a permanent committee of two Senators and five Deputies, who have powers of legislation and administrative supervision. Governors of departments are appointed by the President; their administrative councils are elected.

HISTORY. In November, 1907, a boundary demarcation treaty was negotiated with Brazil. In the same month Congress sanctioned a bill establishing absolute divorce under exceptionally broad conditions. The general elections on November 25th aroused little interest, and the ad-

ministration party secured a large majority of the seats. In December, 1908, a Supreme Court was established and the judicial system was re-organized. On Jan. 26, 1908, the inaugural session of the International Congress of American Students was held at Montevideo. There were over 100 delegates from Argentina, Brazil, Bolivia, Chile, Guatemala, Paraguay, Peru and Uruguay. In his message to Congress in February, 1908, President Williman congratulated the country on the peace and order which characterized the last general and presidential elections. A strike on the Central Uruguay Railroad broke out in February, but it was defeated without much difficulty. A naturalization convention with the United States was signed at Montevideo and sent to the United States for ratification. The annual rural exposition of Montevideo was held in September. These expositions have attained importance on account of the number and quality of live stock exhibited. In October was taken the population census, the results of which are given above.

UTAH. One of the Western States of the American Union. Its area is 84,990 square miles. The population in 1908 was, according to a Federal estimate, 329,525.

MINERAL RESOURCES. The production of copper in Utah in 1907 was 66,418,370 pounds, as compared with 50,329,119 pounds in 1906. The production of coal in 1907 was 1,947,607 short tons, with a spot value of \$2,959,769. In spite of the financial disturbances which curtailed the production in the last three months of the year, the record surpasses that made in 1906 when the production amounted to 1,772,551 short tons. The coal mines of Utah gave employment in 1907 to 2,203 men. In 1907 there was only one strike in the coal mines of the State, and this lasted but four days. There were but six fatal accidents in the coal mines of Utah in 1907. The original estimated total contents of these fields, according to the United States Geological Survey, was 196,458,000,000 short tons. The production in the State since mining began about 1870 is 18,837,182 short tons. The value of the gold product for 1907 was \$5,121,600, as compared with \$5,218,286 in 1906, and \$5,140,920 in 1905. The silver mined was valued at \$7,528,500, as compared with \$7,738,925 in 1906, and \$6,666,028 in 1905. The production of lead amounted to 61,699 short tons, as compared with 56,260 short tons in 1906. The value of the clay products of the State amounted in 1907 to \$633,387, as compared with a value of the product in 1906 of \$634,444. Stone was produced to the value of \$338,382 in 1907, as compared with a value of the same product in 1906 of \$292,745. Other mineral products of the State are zinc, salt, coal products, lime, quicksilver and unclassified, cement, coke, gypsum, iron ores, manganese ores, sulphur and precious stones.

The production of silver and lead in Utah suffered a serious setback in 1908, on account of the general financial conditions and the closing of three smelters by decree of the Federal Courts in smoke damage suits. The gold production was also reduced, as much of the gold in Utah is obtained from copper and lead ores. Many of the mines were closed entirely and others operated under a restricted output. The Director of the Mint estimated the gold production of the State in 1908 at \$3,930,290, against \$5,121,600 in 1907, and the silver production at 7,718,872 fine

ounces, against 11,406,900 fine ounces in 1907. The report of the State coal mine inspector shows a decrease of somewhat more than 6 per cent. in the production of coal, while the production of coke decreased about 60 per cent. The decrease is attributed largely to the financial depression.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1908, according to figures of the United States Department of Agriculture, were as follows: Corn, 323,000 bushels, valued at \$233,000 from 11,000 acres; winter wheat, 1,150,000 bushels, valued at \$978,000 from 5,000 acres; spring wheat, 4,675,000 bushels, valued at \$3,964,000 from 170,000 acres; oats, 2,624,000 bushels, valued at \$1,280,000 from 53,000 acres; barley, 540,000 bushels, valued at \$292,000 from 12,000 acres; rye, 46,000 bushels, valued at \$30,000 from 3,000 acres; potatoes, 1,920,000 bushels, valued at \$1,056,000 from 12,000 acres; hay, 938,000 tons, valued at \$6,941,000 from 375,000 acres. Utah ranks among the leading States in the production of sugar beets. The production of beet sugar in 1908-9 was estimated at 555,555 long tons. Irrigation projects carried on by the United States Reclamation Service have materially increased the agricultural development of the State in recent years. (See IRRIGATION.) Sheep are the only important farm animals in the State. They were estimated at 3,115,000. The wool clipped in 1908 was estimated at 14,700,000 pounds, valued at \$2,231,460.

MANUFACTURES. The recent progress in manufacturing is shown by the increase in the value of the products of factories from \$17,981,600 in 1900 to \$38,926,400 in 1905. The leading industries, the value of their 1905 products and (in parentheses) the percentage increase in value over 1900 were: Flouring and grist milling, \$2,425,790 (46.2); railway repair shops, \$1,886,600 (44); printing and publishing, \$1,466,500 (90.3); confectionery, \$1,004,600 (149); dairy products, \$963,800 (150); and canning and preserving fruits and vegetables, \$801,958 (166). Of the value of products in 1905 Salt Lake City was credited with \$7,543,980 and Ogden with \$2,997,000.

EDUCATION. The school districts of five counties of the State have been consolidated into County School Districts of the first class since the enactment of the law in 1905. The Legislature of 1907 passed a law providing for a levy of one half mill for the establishment and maintenance of public school libraries in the rural districts of the State. A number of libraries have been established in accordance with this provision. The same Legislature enacted a law providing for a State Committee to formulate a State course of study for the public schools outside of cities of the first and second class, to consist of the State Superintendent of Public Instruction, the Principal of the State Normal School and the Principal of the State Normal Training School, and two County Superintendents of Schools to be appointed by the State Board of Education. The State course of study was published in 1908, in compliance with this law. The State Legislature also enacted a law providing for public school teachers' retirement commission. Such an organization was effected in Salt Lake City in 1908. The report of the Superintendent of Public Instruction for the school year 1908 shows the num-

ber of pupils of school age in the State as 89,660, and the number enrolled in the public schools 81,535. The average number of pupils in daily attendance was 66,484. The number of schools in the State was 662. The number of male teachers 544, and female teachers 1,562. The average salary of male teachers per month was \$77.32, and of female \$53.60. Twenty-five new school buildings were erected during the year. The amount paid on the construction of these was \$299,591. The total expenditure for education during the year was \$2,329,965.

POLITICS AND GOVERNMENT. There was no meeting of the State Legislature in 1908. The Federal government on Feb. 1st filed a bill in the District Court at Salt Lake City, charging the Harriman railroad lines with restraint of trade, and asking for an injunction. (See **RAILWAYS**). On March 2nd, Judge Marshall in the Federal Court at Salt Lake City handed down a decision that the Union Pacific Coal Company must answer the charge of violating the Sherman anti-trust law. Judge Marshall sustained the company's demurrer to one count of the indictment and overruled it on a second. The count overruled charged general conspiracy with the Union Pacific Railway, the Oregon Short Line, and a number of individuals to deprive a coal dealer of the right to sell coal at any price he chose. The indictment was the result of a hearing of the Interstate Commerce Commission in 1906.

The Union Pacific Railroad, the Union Pacific Coal Company, the Oregon Short Line Railroad, Everett Buckingham, former General Superintendent of the Oregon Short Line, and J. M. Moore, formerly General Western sales agent of the Union Pacific Coal Company, were found guilty of conspiracy in restraint of trade, on Dec. 3rd.

CONVENTIONS AND ELECTIONS. The Republican State Convention for the nomination of delegates to the National Convention, met on May 7th. Resolutions were adopted declaring the first choice of the delegates for President to be Theodore Roosevelt, and the second W. H. Taft. The Democratic State Convention on June 10th instructed the delegates chosen to vote for W. J. Bryan for President. In the election of Nov. 3rd, the Republicans carried the State by a majority of 13,445 for Taft, and a plurality of 9,538 for the Republican candidate for Governor, William Spry. The most surprising feature of the election was the defeat of the American ticket in Salt Lake County. Salt Lake City, which usually gives the American ticket a substantial plurality, went Republican by 1,100. The detailed vote on the national ticket was as follows: Taft, 61,015; Bryan, 52,601; Debs, 4,895; Hisgen, 87.

STATE OFFICERS: Governor, William Spry; Secretary of State, C. S. Tingey; Treasurer, David Mattson; Auditor, Jesse D. Jewkes; Adjutant-General, E. A. Wedgwood; Attorney-General, A. R. Barnes; Superintendent of Education, A. C. Nelson; Commissioner of Insurance, Secretary of State, ex-officio—all Republicans.

JUDICIARY—Supreme Court: Chief Justice, Daniel N. Straup, Republican; Justices, W. M. McCarty and J. E. Frick; Clerk, H. W. Griffith, Republican.

The State Legislature of 1909 is composed of 18 Republicans in the Senate, 43 Republicans and 2 Democrats in the House. The State repre-

sentation in Congress will be found in the article **UNITED STATES** under the section *Congress*.

VACCINATION. See **SMALLPOX**.

VAGRANCY. Owing to the very unusual amount of unemployment (q. v.) in 1908, there was an abnormal amount of vagrancy and homelessness. To the thousands of habitual tramps in the United States were added many thousands of men who, unable to support themselves because of lack of work, were reduced to the necessity of tramping, begging, or existing on the meagre doles obtainable in city bread lines. The number of tramps in the United States in 1908 was set down at 300,000, though other estimates were as large as half a million. They tend to congregate in the cities, especially during the winter months, and hence greatly increase the problems and difficulties of organized charities and other relief agencies. An especial difficulty is to distinguish the worthy from the unworthy. Moreover, the habitual vagrants, including as they do many persons of criminal tendencies, greatly increase the numbers of crimes in cities in winter. Some States have dealt with the problem in an effective manner. In New England tramps are sentenced to the workhouse; in New Hampshire there is a reward of \$10 for every vagrant arrested, the result being that the State is practically free of them. The National Vagrancy Committee formed in 1907 has developed the proposition of making the vagrant pay his way as he goes. Rochester, N. Y., following the committee's suggestions, has almost freed itself of tramps and their petty robberies. Late in December, Governor Hughes of New York held a conference with several men prominent in organized charity with reference to more effective means of handling the problem of vagrancy in that State. It was proposed that farm colonies be established for vagrants. It was stated that magistrates in city courts feel under the necessity of dealing leniently with vagrants, because of the difficulty of distinguishing the purposeful from the unfortunate. It was stated also that workhouses in many cities were already full. Farm colonies, it was thought, would make possible reformative measures for habitual drunkards and vagrants, and all those who steal rides on railroads, and at the same time permit a distinction of the industrious and honest from the congenitally lazy and untrustworthy. The plan proposed included parole for those worthy, and the punishment of escape by sentence to state prison.

The advisability of maintaining bread lines and soup kitchens in the large cities received considerable discussion in 1908, especially near the close of the year. The maintenance of such bread lines as those at the Bowery Mission and elsewhere in New York City were condemned as fostering the evil they are designed to cure. It was argued that the bread line is an incentive to the tramp to continue in his vagrancy; that it is a temptation to runaway boys and destitute men to fall into habitual pauperism; that it in no way puts men in position to support themselves, and that it is almost the sole survival of that indiscriminate giving to worthy and unworthy alike, which was previously almost universal. The contention that the bread line does not deprive its beneficiaries of the respect of their fellows, nor affront their self-respect, was also disputed. Mr. W. F. Persons, Super-

intendent of the Charity Organization Society, declared that such relief was certainly not conducive to self-respect, or to the respect of others. On the other hand, the relief extended by organized charity was criticised also. It was shown that in four winters charity officials had distributed among men in New York City bread lines 60,000 cards issued by the Joint Application Bureau, a bureau designed to render aid to homeless and destitute men by finding them a chance to earn their bread honestly. Of these cards only 2 per cent. were used, and less than one-half of these beneficiaries returned for aid a second time. To show that the system used by organized charity does not appeal to the majority of destitute men, it was pointed out that in December the call of the Street Cleaning Department for laborers reduced by more than one-half the number in the bread lines and at the Municipal Lodging House. One point made much of was that, while the bread line and the aid extended by such organizations as the Bowery Mission and the Salvation Army, is rendered anonymously so far as the recipients are concerned, the agencies of organized charity and the Municipal Lodging House require registration and some investigation into the character and history of the applicant for aid. It would seem that the majority of destitute men, even those who are worthy, are suspicious of systematized relief work, and feel that they lose caste by formal application for assistance.

In Europe also the amount of vagrancy was increased because of unemployment. In England, where the cost of vagrants is put at £3,000,000 annually, colonization is being resorted to more and more. The effort is also being made to restrict the recruiting of vagrants from the ranks of childhood. An index of the unusual amount of vagrancy may be found in the fact that the number of persons receiving poor law relief in the last three months of 1908 was greater in proportion to population than at any other time in thirty-five years. In London alone the number reached almost 130,000, or 27 per 1,000 of the population.

In Germany similar conditions existed. It was asserted in the Reichstag that the number of unemployed, as shown by sick funds, was at least 400,000. As in the United States and England the cities, especially Berlin, had fully double their customary number of unemployed, destitute and homeless men.

In Switzerland the vagrant is severely handled. Those out of work through temporary accident or misfortune are carefully distinguished from the lazy, the incapable, or the criminal. Every workingman has papers which make it possible for police authorities to tell at once his proper classification. The relief in kind stations supply temporary aid to worthy unemployed, but are not open to unemployed whose papers are not clear in every respect. Men who have been out of work more than three months cannot secure aid at these stations. There are also "home inns," where workingmen and their families may stay for a short time; and in industrial centres "warm rooms" are maintained at either public or private expense, as waiting rooms for unemployed looking for work. Begging and vagrancy are crimes; in some cantons fees are given to the police for the arrest of beggars or vagrants. Such are thrown into penal workhouses to be released

only at official discretion. Such institutions are governed by military discipline, and are more than self-supporting. See UNEMPLOYMENT.

VARIABLE STARS. See ASTRONOMY.

VASSAR COLLEGE. An institution for the higher education of women at Poughkeepsie, N. Y., founded in 1861. The attendance in 1908-9 was 1,014. The total number is limited to about 1,000. The value of the endowment and buildings in 1908 was \$3,423,000, and the annual income approximately \$590,000. There are 98 offices of instruction and a library of 63,000 volumes. A Maid's Club House and the Sanders Laboratory of Chemistry, erected at a cost of \$100,000, were completed in 1908. Among the new professors added in 1908 were I. Woodbridge Riley, Ph. D. (Philosophy), and Charles W. Chamberlain, Ph. D. (Physics).

VENEZUELA. A republic of South America. Area, about 363,800 square miles; population (1906), estimated at 2,619,218. The principal cities are Caracas, the capital, with about 90,000 inhabitants; Valencia, 40,000; Maracaibo, 35,000; Baraquismeto, 32,000.

EDUCATION. Elementary education is free and compulsory. The elementary schools number 1,330. At Caracas are two normal schools. For secondary instruction there are 33 national colleges, besides private colleges, which receive a subvention from the government. For professional and higher education there are the National University at Caracas, the University of Los Andes at Merida, schools of agriculture, engineering, fine arts, a military academy, a nautical school, etc.

PRODUCTION. The mineral resources are great but undeveloped. Gold (556,479 grams in 1906), silver, copper, iron, coal (14,064 tons in 1906), asphalt and salt mines are worked. Salt mining is a government monopoly, leased to a company at an annual rent of 3,500,000 bolivars (1 bolivar equals 19.3 cents). Asphalt is exported. Petroleum of good quality is found in the State of Tachira. Pearl-fishing off the north coast, round the island of Margarita and neighboring isles, yields \$300,000 worth annually. Coffee, cacao, sugar, cattle and rubber are the principal agricultural products exported. Rice has been introduced with considerable success, but it has been found difficult to dispose of it even in the home market, due to the lack of means of transportation. Wheat is grown to a considerable amount in the western part of the country, yet a flour mill in La Guayra finds it cheaper to import wheat from the United States than to buy the home-grown product. Cattle and other live stock are numerous. The general economic backwardness is owing to the want of transportation facilities, which is caused by the topography of the country. The most healthful and habitable part of the country, in which energetic and prolonged work may be carried on, is hedged in from the sea by high mountains. Along the whole northern coast there is hardly a navigable river for any practical distance, and railroad construction is difficult and costly. Owing to their isolation from the world's markets, the inhabitants of the interior produce only what is needed for their own wants. In 1908 the match monopoly was abolished.

FOREIGN COMMERCE. In the fiscal year 1906-07 the total imports amounted to \$10,335,817 and the total exports, \$16,203,972. The chief articles

of import are cereals, flour and kerosene oil from the United States; textiles, machinery, hardware and coal, principally from Great Britain; cement and rice, principally from Germany; wines and silks from France. The principal exports in 1906-07 were: Coffee, 98,992,832 pounds, valued at \$7,593,275, about one-half of it going to the United States; cacao, 26,303,061 pounds, valued at \$2,864,773, two-thirds of it going to France; balata rubber, 3,441,476 pounds, valued at \$1,190,494; cattle, over \$1,000,000, mainly to Cuba. The imports and exports of Puerto Cabello in 1907 amounted to \$1,380,860 and \$2,470,773 respectively. Rubber shipments from Ciudad Bolívar, in 1907, amounted to 258,404 kilos of Para and Ceara, valued at \$348,440, and \$1,455,973 kilos of balata, valued at \$1,092,000. The prospects of the rubber industry are not very good, owing to the system of felling trees in order to extract the gum. The more accessible forests are already becoming exhausted. Regulations have been issued by the government forbidding or restricting this practice. The imports to and exports from the principal countries in 1906-07 were valued as follows: United States, \$2,826,471 and \$5,060,095 respectively; Great Britain, \$3,927,410 and \$1,001,376; Germany, \$2,049,230 and \$584,266; Netherlands, \$954,512 and \$1,925,453. The exports to France and Cuba were, respectively, \$4,073,395 and \$1,046,852. According to United States returns for the fiscal year 1907-08, the imports from Venezuela amounted to \$6,725,184 and the exports to Venezuela \$2,555,863.

COMMUNICATIONS. The roads are mostly cart and mule tracks. The railways have a length of about 540 miles. The German railway from Valencia to Caracas is 288 miles long, with a branch line of 8 miles. The length of telegraphs is 4,550 miles. The Orinoco river system is navigable for about 11,160 miles; its traffic is practically a monopoly of the Orinoco Steamship Company. The Venezuelan merchant marine (of 100 tons and over) consisted in 1907 of 10 steamers, of 2,263 tons, and 9 sailing vessels, of 1,282 tons.

GOVERNMENT. The President of the Republic—in 1908, General Cipriano Castro (see *History*)—is elected for six years by electors chosen by Congress from among its own members, one for each State and the Federal District. He cannot serve two successive terms. The Congress consists of a Senate of 26 members, two for each State, and a Chamber of Deputies elected by States, one for every 40,000 inhabitants or major fraction thereof. The Federal Districts and the more populous Territories also elect Deputies. Senators and Deputies are elected for six years. The presidents of States are appointed by Congress; their legislatures are elected by direct and secret popular vote. The country is divided into 13 States, 5 Territories and a Federal District. The governors of Territories are appointed by the President of the Republic. The Federal District is divided into two sections: the East, with Asunción for its capital, and the West, with Caracas for its capital. Each section has its own governor.

FINANCE, ETC. The revenue and expenditure in 1906 amounted to 49,293,067 and 51,874,694 bolívars respectively. The customs duties yielded 20,544,083 bolívars, the transit duties 5,791,895, and the salt monopoly, 4,038,987. Of the expenditure, 10,271,109 bolívars were for the army and navy, 11,393,222 for the service of the na-

tional debt, and 2,294,443 for education. The debt stood on July 31, 1907, at 230,904,012 bolívars. The army consists of about 8,000 infantry and 1,600 artillery. The navy at the beginning of 1908 consisted of one gunboat, 509 tons, and two destroyers, of 771 tons.

HISTORY.

INTERNATIONAL DIFFICULTIES. During the year 1908 the international relations of Venezuela, under the guidance of President Castro's dictatorial hand, continued to move in stormy waters. To the old quarrels with Colombia, France, Great Britain and the United States, new ones were added. In January the contract of the government with the English corporation having the Venezuelan salt monopoly was revoked. In March the Colombian agent sent to settle the disputes with Venezuela regarding navigation and boundaries, reported to his government the failure of his mission. In the same month, the decision of the lower court against the New York and Bermudez Asphalt Company was affirmed by the Superior Court. In addition, a fine of \$5,000,000 was imposed on this company for promoting the Matos rebellion. Ill-feeling was heightened by the opening of the mail bags intended for the United States cruiser *Tacoma*. In April, Castro made known his refusal to consider the American demands. In the same month the port of La Guayra was closed, owing to the prevalence of a disease which was believed to be the bubonic plague. The sanitary condition of interior cities was also reported to be very bad. Venezuelan commerce was almost destroyed by the quarantine against Venezuelan ports established by foreign countries. The cattle export to Cuba was stopped by a quarantine decree issued by Governor Magoon. Other Central and South American countries took similar action. A considerable falling off in the revenues of the government was the result. In June the United States withdrew its legation at Caracas and placed its diplomatic affairs in the hands of the Brazilian legation. On July 1, the Court of Cassation, the court of last appeal, sustained the judgment of the lower courts against the Asphalt Company. Two weeks later the Venezuelan government withdrew its chargé d'affaires from Washington, so that diplomatic relations between the United States and Venezuela were entirely severed. Consular and trade relations, however, were not interrupted. In August, Castro refused to allow the Brazilian Minister to take charge of French affairs. In the same month the Venezuelan Civil Court of First Instance fined the French Cable Company \$5,000,000 for having given aid to the Matos rebellion.

TROUBLE WITH THE NETHERLANDS. The difficulties between the Venezuelan and Dutch governments which led to the patrolling of the Venezuelan coast by three Dutch warships toward the close of the year, are described in the article **NETHERLANDS**, paragraphs on *History*, but may here be briefly mentioned. They began in the spring when the Dutch Minister to Venezuela, M. de Reus, reported that the plague had broken out at La Guayra, whereupon the Dutch colony of Curaçao established a quarantine. President Castro denying that the plague was a menace retaliated with a decree prohibiting the transshipment at Curaçao of goods destined for Venezuela (May 14). The Venezuelan government also protested against Dutch filibustering and smuggling. The transshipment decree seriously injured the trade of Curaçao,

which further complained of the seizure of Dutch vessels on the high seas and the opening of their mails. The Dutch Minister protested vigorously, and an indiscreet letter of his reflecting on the course of President Castro appeared in the press. Castro sent him his passports on July 22, declaring that he was not a friendly medium of communication. On July 25 a Curaçao mob attacked the house of the Venezuelan Consul at Willemstad, forcing him to take refuge at the German consulate. Diplomatic relations were now severed. The Dutch, on ascertaining that the United States government would not oppose the use of force without occupation of territory, planned a naval demonstration and demanded of Venezuela the recall of the transshipment decree of May 14, at the same time expressing regret for the action of the mob at Willemstad. President Castro refused the demand on Sept. 12, and on Oct. 20 ordered the defence of La Guayra on account of the Dutch threat of naval demonstration on Nov. 1. Three Dutch war vessels began to cruise in Venezuelan waters on Dec. 2. On Dec. 12, the Dutch cruiser *Gelderland* seized a Venezuelan coast guard vessel, sent the crew ashore, and took the vessel to Curaçao. The act was explained as a reprisal for the unfriendly acts of Venezuela and it was denied at The Hague that it meant war. On Dec. 11, the Venezuelan Foreign Minister in a note to the diplomatic body protested energetically against this and other instances of aggression on the part of the Dutch. On Dec. 14, Acting President Gomez issued a decree calling the acts of the Dutch a "true invasion of Venezuelan territory," and declaring the country in a State of defense. At this juncture occurred the popular demonstration at Caracas against the Castro régime, which was followed by changes in the cabinet and the announcement by President Gomez of a new policy (see following paragraph). On Dec. 22 it was announced that the transshipment decree had been revoked and that negotiations for the settlement of the dispute would be opened. Trade between the two countries was now resumed, and on Dec. 28 The Hague Foreign Office declared that the difficulties with Venezuela were provisionally at an end and that the government would take no further action in pressing its demands but await the issue of the conciliatory measures proposed by the new government at Caracas.

REACTION AGAINST CASTRO. Meanwhile President Castro had sailed for Europe to undergo a surgical operation, landing at Bordeaux on Dec. 10, and Vice-President Gomez became Acting President. After a short visit to Paris, Castro went on to Berlin for surgical treatment by a German specialist. Rumors abounded as to the nature of his errand, the vast amount of money he had taken with him, and the true reason for his departure at this time. It was said that he had seen that the tide was turning against him and that he had left Venezuela to escape the consequences and without thought of return. On the other hand, it was thought by some that he intended to negotiate in person with foreign governments concerning matters in dispute, but there was evidence that he was not received in this official capacity either in Paris or Berlin. Agitation against him began in Venezuela after his departure and Acting President Gomez was repeatedly urged to join in his overthrow. Finally, on Dec. 16 came the news of a popular tumult in Caracas, where a mob shout-

ing "Down with Castro," wrecked the office of the Venezuelan Lottery Company, a government monopoly, and of a Castro newspaper, attacked the offices of Castro's friends and tore down the inscription in his honor in the public buildings. For some hours the mob controlled the city, but the trouble subsided when Acting President Gomez threatened to employ the military. There was no demonstration against the Netherlands or other foreign powers. Castro's hold on the people had for some time past been growing weaker. Aside from his arbitrary administration, he was blamed for the international difficulties, the falling off of foreign trade, the establishment of monopolies and the failure to take measures to check the spread of the plague. On Dec. 20 Castro's partisans were arrested on a charge of plotting to kill Gomez and his supporters, the political prisoners of the Castro régime were released, and Castro's letter of credit was cancelled. On the following day Gomez dismissed the Castro Cabinet and appointed new Ministers representing the various political factions. President Gomez was said to have had no sympathy with his former chief's foreign policy and the first acts of the new government showed a more conciliatory attitude toward the matters in dispute. On the 24th Castro's decree permitting trade with Colombia at only a few points was revoked, and on the same day José de J. Paul, Minister of Foreign Affairs under Castro, sailed for Paris and The Hague, to negotiate with France and the Netherlands for a settlement of pending disputes.

For further details see *NETHERLANDS, History*, and *UNITED STATES, Foreign Relations*.

VERMONT. One of the North Atlantic States of the American Union, belonging to the New England group. Its area is 9,564 square miles. The population in 1908, according to a Federal estimate, was 353,739.

MINERAL RESOURCES. The products of stone form the chief mineral resources of Vermont. Of these, marble and granite form the larger part of the production. In the quarrying of marble Vermont greatly surpasses any other State. The value of this product in 1907 was \$4,596,724, as compared with a value of \$4,576,913 in 1906. Granite was produced in the State in 1907 valued at \$693,889, which was a great reduction of the value of the product of 1906, which was \$2,934,853. The total value of the stone products of the State in 1907 was \$7,313,739, as compared with a value of the same product in 1906 of \$7,526,466. Slate is produced in large quantities. The value of the product in 1907 was \$1,477,259, as compared with a value of \$1,413,341 in 1906. Manufactures of clay products in 1907 amounted to \$109,500 and to \$315,968 in 1906; 88,550 gallons of mineral water was produced in 1907, valued at \$19,948, as compared with 77,500 gallons valued at \$22,150 in 1906. Other products which are comparatively limited in output are coal products, clay products, lime, mineral waters, metallic paint, sand and gravel, talc, and soapstone. According to the figures of the United States Geological Survey, from whose reports the statistics given above are taken, the value of the total mineral production of the State in 1907 was \$9,464,857, as compared with a value in 1906 of \$9,452,504.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm

crops in 1908, according to figures of the United States Department of Agriculture, were as follows: Corn, 2,499,000 bushels, valued at \$1,949,000, from 62,000 acres; spring wheat, 23,000 bushels, valued at \$23,000, from 1,000 acres; oats, 2,664,000 bushels, valued at \$1,652,000, from 80,000 acres; barley, 462,000 bushels, valued at \$323,000, from 14,000 acres; buckwheat, 176,000 bushels, valued at \$123,000, from 8,000 acres; potatoes, 1,971,000 bushels, valued at \$1,321,000, from 27,000 acres; hay, 966,000 tons, valued at \$14,041,000, from 870,000 acres; tobacco, 347,000 pounds, valued at \$45,110, from 210 acres. The hay crop of 1908 showed a considerable decrease from that of 1907, which was 1,416,000 tons. The farm animals in the State on January 1, 1909, were estimated to number as follows: Horses, 93,000; dairy cows, 288,000; sheep, 227,000; swine, 98,000. The output of dairy and poultry products is large.

MANUFACTURES. A comparison of the censuses of 1900 and 1905 on the basis of industries carried on in factories shows an increase in the number of wage-earners from 28,179 to 33,106, and in the value of products from \$51,515,000 to \$63,083,600. The values credited to the leading industries in 1905, and (in parentheses) the percentage increase over the 1900 values were: Butter and cheese, \$6,416,400 (16.7); lumber and timber products, \$5,888,400 (no change); marble and stone work, \$4,955,000 (99.5); monuments and tombstones, \$4,615,300 (18.4); paper and wood pulp, \$3,831,400 (13.2); flour and grist mill products, \$3,206,000 (15.8); textiles, woolen goods, \$4,698,400 (82.6); hosiery and knit goods, \$1,988,700 (8.4); and other goods, \$1,086,522 (8.7). Burlington produced \$6,355,700 of the value of products, Barre, \$3,373,000 and Rutland, \$2,522,800.

EDUCATION. The Legislature of 1906 passed several measures of great importance to the advancement of education in the State. It provided for a system of district supervision, and this was put into operation on July 1st, 1907. From that period to July 1st, 1908, there were 20 supervision unions formed, and for the second supervision year beginning July 1st, 1908, six unions were formed. The operation of the system has been very successful. During the first year of its existence, there was an increase, in the twenty unions of two or more towns, over the previous year, of more than 200 teachers' meetings held; nearly 4,000 visits by the Superintendent, and 40,095 days' attendance by the pupils. The Legislature sequestrated three funds to make a permanent school fund for the State: the United States Deposit Fund, amounting to \$669,086.74; the Huntington Fund, \$211,131.46, and the War Claims Fund, granted in 1904 to the State, \$240,000, amounting in all to \$1,120,218.20. Measures were passed by the Legislature providing for the transportation of pupils who were not conveniently situated for attending schools. This law did away with a great number of small schools in rural communities, most of which numbered less than ten pupils. A law was passed classifying high schools and specifying the conditions that should govern them. The total number of pupils in the State in 1908 was 65,781. Of these 41,135 were between the ages of 8 and 18 years. The number of male pupils was 33,057; female

pupils, 32,724. The average attendance per day was 48,606. There were in the State in 1908, 2,484 public schools. Of these 832 were graded schools. There were 2,165 school house in the State. The male teachers numbered 354, and the female teachers 3,561. The average wages per month was, \$30.32 for men in ungraded schools, and \$48.16 in graded schools; \$32.02 for women in ungraded schools, and \$39.08 in graded schools. The total sum raised for educational purposes in the State in 1908 was \$2,016,014.62.

FINANCE. The Report of the State Treasurer for the fiscal year ending June 30th, 1908, shows that there was a balance on hand July 1st, 1907, of \$484,080. The total receipts for the year 1908 were \$1,852,437, and the total disbursements were \$1,819,284, leaving cash on hand and in banks June 30th, 1908, to the amount of \$517,234. The chief sources of revenue were taxes from savings banks and trust companies, \$402,479; from railroads, \$237,970, and from insurance companies, \$108,043. The chief disbursements were on account of the permanent school fund \$237,554; distribution of the State school tax of 1907, \$152,064, and the distribution of the State highway tax of 1907, \$98,310. The permanent school fund on July 1, 1908, amounted to \$470,835, and the Agricultural College fund to \$135,500.

POLITICS AND GOVERNMENT. Redfield Proctor (q. v.), United States Senator from Vermont, died on March 4th, and on March 24th Governor Proctor appointed John W. Stewart to serve in his place until his successor should be elected. On October 21st Carroll S. Page, Governor of the State from 1890 to 1892, was elected to fill the unexpired term. W. P. Dillingham was reelected Senator to succeed himself.

CONVENTIONS AND ELECTIONS. Town and city elections were held on March 2nd. The interest centred in the vote for or against license. No-license made decided gains. Barre and St. Albans changed from "wet" to "dry," while Burlington swung from no-license to license. The Republicans generally elected their town officers. The Republican State Convention on April 29th chose uninstructed delegates to the National Convention. The Democratic State Convention met on June 26th. A resolution to instruct the delegates for the National Convention for W. J. Bryan was defeated. Nominations were made for a State ticket, and James E. Burke was nominated for Governor. The Republican party on July 1st nominated Lieutenant-Governor George H. Prouty for Governor. In the State election, held on September 1st, the Republican candidate for Governor received a plurality of about 26,000. The entire Republican ticket was elected, but the Democrats increased their membership in the House of Representatives from 32 to 42. In the election of November 3rd the Republican party carried the State by a plurality of about 28,000. The detailed vote for national and State tickets; Taft, 39,552; Bryan, 11,496; Chafin, 799; Hisgen, 804. Prouty, 45,598; Burke, 15,953.

OTHER EVENTS. On October 27th an explosion and fire which destroyed the Boston and Maine and Canadian Pacific grain elevator at Richford, caused the death of thirteen persons, including two women.

STATE OFFICERS. Governor, George H. Prouty; Lieutenant-Governor, John A. Mead; Secretary of State, Guy W. Bailey; Treasurer, Edward H.

Deavitt; Auditor, Horace F. Graham; Attorney-General, J. G. Sargent; Superintendent of Education, Mason S. Stone; Commissioners of Insurance, E. H. Deavitt and Guy W. Bailey—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, John W. Rowell; Assistant Justices, Loveland Munson, John H. Watson, Seneca Haselton; Clerk, M. E. Smilie—all Republicans, except Haselton.

The State Legislature of 1909 is composed of 28 Republicans and 2 Democrats in the Senate, 201 Republicans, 31 Democrats, 3 Independent Democrats, and 1 Independent Republican in the House. The State representation in Congress will be found in the article UNITED STATES, under the section *Congress*.

VETERINARY SCIENCE. Quite a step was taken during the year 1908 toward the advancement of veterinary education in the United States. Inasmuch as over 800 veterinarians were employed by the United States Department of Agriculture in the various kinds of work conducted by the Bureau of Animal Industry it was important that men be well equipped to thorough education to fill these positions. With this in view the Secretary of Agriculture appointed a committee of five prominent veterinarians to obtain information regarding the courses of instruction given at the various veterinary colleges throughout the United States. In the report of this committee recommendations were made as to the matriculation examination and course of instruction necessary to qualify graduates for admission to the Civil Service examination for the position of Veterinary Inspector in the Bureau of Animal Industry. As only eleven out of nineteen veterinary colleges visited were so rated that their graduates are recommended as eligible to the United States Civil Service examination it is quite evident that the investigation will result in the raising of the standard of the veterinary colleges.

TUBERCULOSIS. Tuberculosis in 1900 continued to receive more attention than any other disease. In October the International Congress on Tuberculosis was held at Washington, D. C., at which all phases of this, the greatest medical problem before the people, was discussed. Dr. Robert Koch and his followers repeated the view that while human beings may be infected by bovine tubercle bacilli, serious disease from that cause occurs very rarely and therefore measures against tuberculosis should be directed primarily against the propagation of the human tubercle bacilli. This, however, was not the view held by a great majority of the bacteriologists that have investigated the disease who consider tuberculosis in cattle a most serious menace to public health, and one that urgently calls for eradication. Among the foremost in this latter view was Dr. Theobald Smith, of Harvard University, who first called attention to the differences between the tubercle bacilli found in man and in cattle. He maintained that perhaps half of certain kinds of tuberculosis in children, such as those of the glands of the neck and the abdomen, are due to infection from milk; that while these bacilli can be modified to a certain extent, such modification does not mean a change of type, and that any transformation from one type to the other has still to be demonstrated. Dr. E. C. Schroeder of the Bureau of Animal Industry, in repeated tests and bacteriological examinations, found that the most common way in which the tubercle bacilli leaves the body of infected cattle

is in the faeces. An examination of 172 samples of milk sold in the District of Columbia showed that 70 per cent. of these samples contained cattle faeces. The presence of faeces in milk from tuberculous herds was conclusive evidence that the milk also contains tubercle bacilli.

HOG CHOLERA. Further investigations by the Bureau of Animal Industry, coöperating with State Agricultural Experiment Stations, demonstrated that the serum-simultaneous method of immunization could be practically applied, and that it would undoubtedly prevent a large part of the annual loss of millions of dollars in the United States, due to hog cholera. This method consisted of the injection on one side of the body of a pig with a suitable quantity of serum obtained from hyperimmunized hogs and simultaneously on the other side of the body of a quantity of virulent blood taken from a hog sick of hog cholera. Experiments showed that hogs in this way were given a firm immunity that lasts six months, and probably much longer.

TEXAS FEVER OR BOVINE PIROPLASMOSIS. The work of eradicating the cattle tick was continued by the United States Department of Agriculture under the appropriation of \$150,000, in coöperation with the various States interested. During the fiscal year ended June 30th, 1908, there were released from quarantine in California 21,136 square miles, in Texas 660 square miles, in Oklahoma 2,612 square miles, in Arkansas 3,071 square miles, in Tennessee 3,820 square miles, in North Carolina 6,312 square miles and in Virginia 3,181 square miles, a total of 40,798 square miles. In addition to these States, active operations were carried on in South Carolina, Georgia, Alabama, Mississippi, Louisiana and Missouri. A total of 2,271,436 inspections were made during the year. That the work of eradication carried on during the last three years had resulted in freeing more than 64,000 square miles of territory was sufficient proof that a complete eradication of cattle tick from this country is possible. Besides the State coöperation, that of the individual cattle owner is the most necessary in the work of eradication.

FOOT AND MOUTH DISEASE. This was one of the contagious diseases of live stock that the United States quarantine against importations of domestic animals had since the outbreak in New England in 1902-03 prevented from entering the country until 1908. In November, 1908, the disease was discovered in cattle at Dansville, Pennsylvania. A quarantine was immediately declared by the Secretary of Agriculture against the interstate movement of cattle, sheep, swine and goats from the several counties in that vicinity. The disease was found to have been introduced with cattle shipped from Buffalo (N. Y.) stock yards. Upon further investigation the infection was found to have originated in Wayne County, Michigan, and to have in some manner been brought there from abroad, probably in such material as straw, merchandise, clothing or biological products, or with the effects of immigrants. The disease was also found to have spread in New York and into Maryland through the shipment of stocks from Buffalo, and these localities were quarantined. By the coöperation of national and State officials the affected herds were slaughtered and buried in great trenches, and

all infected barns disinfected. On December 31st the disease appeared to be well in hand with every prospect of a complete eradication. The disease is a highly contagious one among many animals, and even man is not immune. It is due to an ultra-microscopic organism. The disease is characterized by acute fever, accompanied by the appearance of small vesicles or blisters in the mouth and around the coronets of the feet and between the toes.

VIADUCT. A single track railway viaduct recently completed at Westerburg, Germany, is peculiar in its design, in that, instead of having two-bent braced towers to support the several spans, single rocker bents are used. The truss system also, instead of being either continuous, or a series of simple spans, consists of a succession of cantilevers. It crosses the valley of the Holzbach at a maximum height of 73 feet, and has a total length of 742 feet. There are five openings, alternately 142 and 158 feet long, the middle and end ones being short, and the suspended spans long. The length of the latter is 110.6 feet, while each cantilever arm is 23.7 feet. The depth of truss is constant, being 15.8 feet, and the distance, centre to centre of trusses, is 10.8 feet.

VICTORIA. A state of Australia. Area, 87,884 square miles; population at the end of 1906, 1,231,940. Melbourne, the capital, had an estimated population of 526,400 on the same date. For details regarding population, education, production, etc., see AUSTRALIA. The executive power is vested in a Governor appointed by the Crown and acting through a responsible Ministry. The Parliament consists of a Legislative Council of 35 members elected for six years, and a Legislative Assembly of 68 members elected for three years. The members of the former are elected upon a property franchise; those of the latter are elected by universal manhood suffrage. The Governor is Sir Thomas D. G. Carmichael. The Premier is Sir Thomas Bent.

The pure food and market supervision acts were declared by the premier, Sir Thomas Bent, to have reduced the death rate to a point lower than that of any other country except New Zealand, namely, to 12 per thousand. In June, Sir T. D. Gibson Carmichael was appointed governor. Parliament was opened the first week of July, and among the measures proposed was a plan for the levying of land taxes in a manner that should promote subdivision and render the occupation of private lands more profitable. The financial condition was declared to be excellent, public burdens during the last five years having been greatly diminished, according to the premier, and public indebtedness reduced. In the first weeks of December a vote of no confidence was passed and the governor sanctioned a dissolution. The question at issue for the next election was the retention of Sir Thomas Bent as premier.

VIELÉ, HERMAN KNICKERBOCKER. An American author, painter and engineer, died on Dec. 14th, 1908. He was born in New York City on Jan. 31st, 1856. He was educated in civil engineering by his father, and practiced his profession for many years, engaging in painting and writing as a pastime. In later years the latter subjects engaged more and more of his attention; and in 1900 he retired from engineering practice in order to devote himself

exclusively to art and literature. His paintings attracted some attention, but he is best known for his verse, and for his novels. These are: *The Inn of the Silver Moon* (1900); *The Last of the Knickerbockers* (1901); *Myra of the Pines* (1902); and *Random Verse* (1903). His last novel, *Heartbreak Hill*, appeared a few months before his death.

VILLAS, WILLIAM FREEMAN. An American political leader, Postmaster-General, and Secretary of the Interior, in the Cabinet of President Cleveland, and United States Senator from Wisconsin, died on Aug. 27th, 1908. He was born at Chelsea, Vt., on July 9th, 1840, graduated at the University of Wisconsin in 1858, and at the Albany Law School in 1860. In 1862 he joined the Union Army as captain of Company A of the Twenty-third Wisconsin Volunteers, and for the bravery he displayed in several engagements was promoted to the rank of lieutenant-colonel. His regiment took part in the siege of Vicksburg, and he remained in command until the fall of 1863, when he resigned his commission and resumed his law practice at Madison, Wis. He soon gained considerable prominence as a lawyer, and in 1875 was made a member of the commission appointed to revise the Statutes of Wisconsin. From 1881 to 1885 he was a professor in the University of Wisconsin Law School. In 1876 he was chosen Wisconsin member of the Democratic National Committee, a position he filled continuously for ten years. In 1884 he was elected a delegate-at-large to the Democratic National Convention, of which he was chosen permanent chairman. The following year he entered President Cleveland's Cabinet as Postmaster-General, and he remained in charge of that department until 1888, when he became Secretary of the Interior. At the end of Mr. Cleveland's first administration, he returned to his law practice, and in 1891 was elected United States Senator from Wisconsin for the term ending in March, 1897.

VIRGINIA. One of the South Atlantic States of the American Union. Its total area is 42,627 square miles. The population, according to a Federal estimate made in 1908, was 2,012,746.

MINERAL RESOURCES. In common with most of the other coal producing States, the coal production of Virginia in 1907 increased largely over the production of 1906. The amount mined in the former year was 4,710,895 tons, as compared with 4,254,879 tons in 1906; the value of the product in 1907 was \$4,807,533, as compared with a value in 1906 of \$4,183,991, the first time in recent years the average price per ton of coal in Virginia exceeded one dollar. Although the coal fields of southwestern Virginia, from which the present production chiefly comes, are of comparatively limited extent, the high quality of the coal and the number and thickness of the beds give promise of a considerably increased production in the next few years. In 1907 there were employed in the mines of Virginia 6,670 men. The number of mining machines used in the State increased from 37 in 1906, to 77 in 1907. There were no labor disturbances of any kind in the coal mines of Virginia in 1907. The manufacture of coke in 1907 shows a slight decrease over the amount produced in 1906. The figures for the former year were 1,445,280 short tons, as compared with 1,557,659 short tons in 1906. The

value of the product, however, was slightly greater in 1907 than in the previous year. The value of the product for the former year was \$3,765,733, as compared with \$3,611,659 in 1906. The production of iron ore fell off slightly in 1907, as compared with the amount produced in 1906. There were produced in 1907, 786,856 long tons, valued at \$1,538,920, as compared with 828,081 tons, valued at \$1,579,817 in 1906. The amount of pig iron produced in 1907 was 478,771 long tons, as compared with 483,525 long tons in 1906. The products of clay fell in value from \$1,966,078 in 1906, to \$1,611,335 in 1907. The value of the various kinds of stone produced in 1907 was \$760,488, a substantial increase over the value of the product for 1906, which was \$606,343. The greater part of the stone produced is granite and limestone. Other important mineral products are coal products, building stone, talc and soapstone, pyrite, mineral waters, lime, slate, zinc, sand and gravel, manganese ores, barytes; also unclassified, arsenic, asbestos, cement, copper, gypsum, lead ochre, quartz, precious stones, salt, and sand-lime brick. Gold was produced in the State in 1907 to the amount of 400.93 fine ounces, valued at \$8,288. There were produced 58,880 pounds of copper, valued at \$11,766. According to the figures of the United States Geological Survey, from whose reports the statistics given above are taken, the value of the total mineral production of the State in 1907 was \$19,313,182, as compared with a value in 1906 of \$24,650,814.

Careful estimates indicate that the production both of coal and coke in the State decreased from 40 to 50 per cent. in 1908, as compared to 1907. This decrease is attributed entirely to the effect of the panic, as there were no strikes, lockouts or other labor troubles during the year. Most of the decreased production occurred during the first part of the year, in which period the output was a bare 40 per cent. of that for the corresponding period of 1907. The gain in the latter half of the year was due largely to the strike of the miners in Alabama, which caused furnace men to turn to Virginia mines for their fuel supply.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1908, according to figures of the United States Department of Agriculture, were as follows: Corn, 50,050,000 bushels, valued at \$35,536,000 from 1,925,000 acres; winter wheat, 8,892,000 bushels, valued at \$8,981,000 from 780,000 acres; oats, 3,820,000 bushels, valued at \$2,101,000 from 200,000 acres; barley, 84,000 bushels, valued at \$58,000 from 3,000 acres; rye, 188,000 bushels, valued at \$154,000 from 3,000 acres; buckwheat, 360,000 bushels, valued at \$259,000 from 20,000 acres; potatoes, 5,016,000 bushels, valued at \$3,612,000 from 57,000 acres; hay, 618,000 tons, valued at \$7,570,000 from 470,000 acres; tobacco, 114,100,000 pounds, valued at \$10,497,200 from 140,000 acres. The production of corn increased considerably in 1908 over 1907, when the crop was 46,025,000 bushels. In the production of tobacco the State ranks third, being surpassed only by Kentucky and North Carolina. The tobacco crop of 1908 was a marked increase over that of 1907, which was 74,556,000 pounds, while the acreage increased from 98,100. The number of farm animals Jan. 1, 1909, was estimated as follows: Horses, 314,000; mules, 53,000; dairy cows, 294,000; other animals, 578,000; sheep, 517,000;

swine, 806,000. The wool clipped in 1908 was estimated at 1,687,500 pounds, valued at \$470,813.

MANUFACTURES. That very considerable progress was made from 1900 to 1905 is shown by the increase in the capital employed in industries carried on in factories from \$92,299,000 to \$147,989,000, of the number of wage-earners from 66,223 to 80,285, and of the value of products from \$108,644,000 to \$148,856,000. Of the wage-earners in 1905, 11,990 were women and 3,240 were children under 16. The value of products of principal industries in 1905 and (in parentheses) the percentage increase over 1900 were: Flour and grist mill products, \$13,832,000 (54.7); lumber and timber products, \$13,040,800 (12.1); chewing and smoking tobacco and snuff, \$10,662,000 (no change); railway repair shops, \$8,693,000 (38.5); cigars and cigarettes, \$6,105,900 (26.1); tanned and finished leather, \$5,829,800 (23.6); iron and steel, \$4,859,000 (41.7); fertilizers, \$4,659,000 (36.4); cotton goods, \$4,484,000 (68.9); planing mill products, \$4,224,000 (57.2); printing and publishing, paper and wood pulp, hosiery and knit goods, and woolen goods also had considerable values. Of the value of products, \$28,202,600 was due to Richmond; \$9,053,900 to Newport News; \$5,900,000 to Norfolk; \$5,890,500 to Petersburg; \$5,544,900 to Roanoke; \$4,965,400 to Lynchburg, and \$4,774,800 to Danville.

EDUCATION. The State Superintendent of Education issues only biennial reports, and the latest statistics available are those for the year 1906-7. At that time there was an enrollment in the State of 257,654 white and 111,677 colored pupils. The average attendance was 158,891 white, and 63,676 colored. The attendance and enrollment were less than in 1906, the reason given being the scarcity of labor and the presence of contagious diseases. The high schools in 1907 numbered 213, with a total enrollment of 9,196. There were 7,248 white and 2,220 colored teachers. The total expenditure for school purposes in 1907 was \$3,308,086, showing an increase of 40 per cent. in two years.

POLITICS AND GOVERNMENT. There was no election for State officers in Virginia in 1908. Among the measures passed at the legislative session of 1908 was one providing for the execution of condemned criminals at the State penitentiary by electricity. Several important judicial decisions were rendered during the year. On Jan. 15th, Judge Pritchard of the U. S. Circuit Court of Appeals decided the case of the Merchants' Coal Company vs. the Fairmont Coal Company, reversing the Circuit Court of the U. S., which had granted an injunction restraining the appellant, an independent coal company, from prosecuting its complaint against the Baltimore and Ohio Railroad. The case related to an alleged discrimination in the distribution of cars on the part of the railroad, which caused damage to independent coal producers. By a decision rendered on March 12th, the State Supreme Court declared that the city of Norfolk had the right to tax wharf property, valued at \$1,000,000, belonging to various railroads. The United States Supreme Court, on Nov. 30th, reversed the decision of Judge Pritchard, which held the two-cent passenger rate law proposed by the Virginia Corporate Commission to be void because confiscatory. The decision did not

pass upon the question of confiscation, but on the procedure adopted by the Southern Railway and five other railroads, which sought the intervention of the Federal Courts before exhausting the remedies provided by Virginia law. (See RAILWAYS.) As a result of failure to reach an agreement between the employees and officials of the Southern Railway in regard to wages, President Finley of the railroad on Feb. 25th referred the question to the Interstate Commerce Commission and the Commissioner of Labor under the Erdmann Act.

CONVENTIONS AND ELECTIONS. The Republican State Convention at Lynchburg on April 8th selected delegates to the National Convention, and instructed them to vote for W. H. Taft for President. On June 11th the Democratic State Convention at Roanoke took similar action in regard to W. J. Bryan. In the election of Nov. 3rd, the Democratic plurality was about 30,000, which was a slight decrease from the Democratic plurality of 1904. The detailed vote for the national ticket was as follows: Bryan, 82,906; Taft, 52,573; Chaffin, 1,111; Debs, 256.

OTHER EVENTS. In January the Seaboard Air Line Railway was placed in the hands of receivers by the Federal Court (see RAILWAYS). There were outbreaks of lawlessness in various parts of the State during the year. In May three men were killed near Philpott, Henry County, as the result of an old-time family feud. In August Portsmouth was the scene of a riot, which broke out on account of an alleged attack by a negro on a white woman, whites and blacks trying to lynch the man, since electrocuted. To hold the enraged mob in check the militia patrolled the streets. In the latter part of September a party of desperadoes terrorized Arvonnia, in Buckingham County. The disturbance was the result of reports by people of the county of illicit distilleries run by four men. On April 15th a shortage of 125,000 was discovered in the bank at Mecklenburg. The cashier confessed to having permitted a prominent business man to overdraw his account without the consent of the officers of the bank.

LEGISLATION. Among the important measures passed at the legislative session of 1908 were the following: A child labor law was enacted (see CHILD LABOR). Several important measures were passed relating to injunctions. A law was passed providing for electrocution as the death penalty. Measures were enacted for the retirement and pensioning of public school teachers. The selling or giving away of cocaine was forbidden, and measures were passed regulating the practice of pharmacy. Several important measures were enacted relating to railroads.

STATE OFFICERS. Governor, Claude A. Swanson, Dem.; Lieutenant-Governor, J. T. Ellyson; Secretary of Commonwealth, D. Q. Eggleston; First Auditor, Morton Marye; Treasurer, A. W. Harman, jr.; Superintendent of Instructions, J. D. Eggleston; Attorney-General, W. A. Anderson; all Democrats.

JUDICIARY. Supreme Court of Appeals: President, James Keith; Justices, S. G. Whittle, John A. Buchanan, George M. Harrison and Richard H. Cardwell; Clerk of the Court, H. Stewart Jones; all Democrats.

The State Legislature of 1908 was composed of 35 Democrats and 5 Independents and Republicans in the Senate and 86 Democrats and 14

Independents and Republicans in the House. The State representation in Congress will be found in the article UNITED STATES, under section Congress.

VIRGINIA, UNIVERSITY OF. An institution of higher learning at Charlottesville, Va., founded in 1819 by Thomas Jefferson. The attendance in 1907-8 was 788 and in the autumn of 1908 it was 766, distributed as follows: Arts, 295; law, 284; graduate students, 32; applied science, 101; medicine, 189. The four years' high school course is accepted for all departments except medicine, in which latter department, in addition to the high school course, one year of college work is required. Tuition is free to Virginia students in the academic schools, and there are a number of scholarships. The annual income is \$210,000. The staff of instruction, now about 100, has been doubled since 1905. The university campus was opened in 1908 and great development was made in the facilities for the schools of science and medicine. The president is Edwin A. Alderman.

VIRGIN ISLANDS. A group of islands in the West Indies, forming a Presidency of the Leeward Islands. Area, 58 square miles; population (1906), 4,908. Sugar and cotton are grown, and fishing is carried on. In 1907-8 the imports and exports amounted to £7,009 and £6,027, respectively. The revenue was £3,791, the expenditure £4,367. The Commissioner in 1908 was R. S. Earl.

VITAL STATISTICS. Statistics for the City of New York for the year 1908 exhibited an increase in the birth rate and a decrease in the death rate over previous years. Dr. Darlington, Commissioner of Health, showed that the death rate for the city had been steadily decreasing for the previous five years. The total number of deaths was 73,171; that is, a rate of 16.52 per thousand of population. This is the lowest mortality in the history of the city. Deaths from typhoid fever were decreased by 197, malaria 42, smallpox 7, whooping cough 184, diphtheria and croup 317, influenza 77, pulmonary tuberculosis 573, spinal meningitis 778, apoplexy 1,116, acute bronchitis 735, pneumonia 2,823 and bronchial pneumonia 149. There was a decrease of 3,015 in the deaths of children under 5 years of age. The advance of sanitary science and popular education in hygiene was believed to account for the low mortality. The total number of births was 126,863, a rate of 28.86 per thousand, the highest in the city's history.

Dr. J. P. Nichols, basing his deductions on the available statistics of living births in all parts of the world, aggregating 693,785,722, says that ordinarily there is a constant excess of male over female births. In the United States in 8,377,527 white births there were an average of 1,059 sons for every 1,000 daughters. An aggregate of 649,415,411 European births gave an average of ratio of 1,057 sons for every 1,000 daughters. The Mussulman or Arabian population of Algeria gives a ratio of 1.191 sons to 1,000 daughters. In India the ratio is 1.075, in Japan 1.047. The colored race of the United States gives the lowest ratio, 778,443 births yielding 1,009 male to 1,000 female births.

SMALLPOX. There was a total of 35,174 cases of smallpox in the United States, with 76 deaths. The States which had any considerable number of cases were: California, 986 cases, 6 deaths;

Colorado, 271 cases; Illinois, 2,067 cases; Indiana, 2,064 cases, 7 deaths; Iowa, 2,488 cases, 4 deaths; Kansas, 3,458 cases, 3 deaths; Michigan, 2,091 cases, 9 deaths; Minnesota, 7,031 cases, 6 deaths; Missouri, 863 cases, 5 deaths; Montana, 732 cases; New York, 846 cases, 1 death; North Carolina, 1,256 cases; Ohio, 863 cases, 3 deaths; Oregon, 664 cases; Tennessee, 676 cases, 1 death; Texas, 3,161 cases, 1 death; Utah, 575 cases, 1 death; Virginia, 396 cases; Washington, 596 cases, 3 deaths; Wisconsin, 1,925 cases, 4 deaths.

PLAGUE. There were 41 cases of plague in the United States, all in California, with 16 deaths. The disease was distributed in all parts of the world, India being the heaviest sufferer with 205,769 cases and 163,126 deaths. China had 1,073 cases and 1,005 deaths. Egypt, 1,317 cases, 708 deaths; Japan, 1,785 cases, 1,437 deaths. Among the South American countries Brazil had 180 cases, 99 deaths; Chile, 290 cases, 70 deaths; Peru, 1,437 cases, 750 deaths. These statistics of plague are compiled from the *Public Health Reports of the United States Marine Hospital Service* and are, as regards foreign countries, admittedly incomplete and incorrect, although the best obtainable.

YELLOW FEVER. There were only 2 cases of yellow fever in the United States, these occurring in Galveston, Texas, and both died.

VIVISECTION. The usual amount of antivivisection agitation was observed during 1908, both in the United States and England, without, however, rousing much public interest or support. Bills strictly regulating animal experimentation were introduced in the legislatures of New York and New Jersey. There was a joint hearing in the Senate Chamber on March 25 before the Senate and Assembly Judiciary Committees of New York. Delegates from New York City, Buffalo, Syracuse and other parts of the State appeared in opposition to antivivisection legislation. The argument in favor of the bills was divided into two parts. First, it was argued that animal experimentation had not been of incalculable benefit to humanity, and denial made of its benefit, not even excepting the antitoxin treatment for diphtheria and meningitis. Second, it was averred that the experimenters worked in secret, and that, working in this way, their natural brutality led them to inflict most atrocious cruelties on weak and defenseless animals. A hearing was held in March before the Legislative Committee of the New Jersey Assembly on the antivivisection bill. Four men and two women were present as advocates and spoke in favor of the bill, while about 250 physicians and educators attended to present the scientific side of the case. According to the *Journal of the Medical Society of New Jersey*, the advocates of the bill disclaimed opposition to animal experimentation, but wanted such regulations, restrictions and inspections as would practically prevent the progress of medicine. They wished such experimentation confined to medical schools. In the widespread public discussion of vivisection, the newspapers, with few exceptions, gave their support to animal experimentation.

VOIT, CARL VON. A German physiologist, died on Jan. 31, 1908. He was born at Amberg on Oct. 31, 1831, studied medicine at Munich and Würzburg and chemistry at Göttingen, became professor extraordinarius in physiology at

Munich in 1860 and professor ordinarius and conservator of the Physiological Institute there in 1863, which chair he held at the time of his death. His investigations prompted the invention of the Pettenkofer respiration appliance, and, with Pettenkofer, he determined the amount of metabolism in a healthy person on different diets, as well as the metabolism of patients suffering from various diseases, experiments which established a scientific basis for the principles of nutrition. His publications include *über die Entwicklung der Erkenntnis* (1879), *Physiologie des allgemeinen Stoffwechsels und der Ernährung*, in Hermann's *Handbuch der Physiologie* (1881), and numerous contributions to the *Zeitschrift für Biologie*, of which he was one of the founders.

VOLCANOES. The year 1908 seems to have been a period of subsiding activity for most of the volcanoes. As an exception to the general rule, the volcanic Bogosloff island group, in the Aleutian chain, which had previously been the scene of many explosive outbreaks whereby new islands were brought into existence and old ones destroyed, was reported to have undergone further changes. The islands are rarely visited and no details of the last disturbance have as yet come to hand. Considerable interest was manifested in connection with the Italian earthquake of December 28 and its possible bearing with regard to the volcanoes of the same region, but the latter showed no abnormal activity. See **EARTHQUAKES**.

WAKE. One of the group of islands in the Pacific Ocean belonging to the United States. It is in the direct route from Hawaii to Hongkong, about 2,000 miles from the former and 3,000 from the latter. The island was acquired in January, 1899. Others among the group of islands in the Pacific in the possession of the United States are Christmas, Penrhyn, Midway and Marcus. The Midway Islands are occupied by a colony of telegraphers, who have charge of the relay in the cable line connecting the Philippines with the United States. A camp of United States marines is also stationed there. In all there are about forty persons on the island.

WASHINGTON. One of the Western States of the American Union. Its area is 69,127 square miles. The population in 1908, according to a Federal estimate, was 646,799.

MINERAL RESOURCES. Although a good part of the market for Washington coal in California has been lost through the increased production of fuel oil in that State, Washington shared the general increase in the production of coal in 1907. The total amount produced was 3,680,532 short tons, with a spot value of \$7,639,801. As compared with the production of 1906, this was an increase of 404,348 short tons in quantity and of \$1,771,367 in value. In November and December, owing to the financial disturbance, the output of the mines was curtailed by 33 per cent. The number of men employed in the coal mines of the State increased from 4,529 in 1906 to 5,945 in 1907. There were 36 fatal accidents in the mines of the State in 1907. The stone products for 1907 were valued at \$920,254, of which granite composed the larger part. The production in 1906 was valued at \$738,652. Other mineral products of the State were coal products, lime, coke, gold, sand and gravel, copper, silver; also, unclassified, antimony,

arsenic, lead, mineral waters, platinum, tungsten and zinc. According to figures of the United States Geological Survey, from whose reports the statistics given above are taken, the value of the total mineral production of the State in 1907 was \$11,617,706 as compared with a value in 1906 of \$9,936,143. The production of gold in Washington was probably greater in 1908 than in 1907, and the output was \$262,300. Most of the mining activities concentrated in Stevens, Ferry and Okanogan Counties. Concentrating operations were begun in the Metaline lead mining district, which is still suffering from lack of transportation facilities. It is estimated that the coal production of Washington in 1908 was between 20 and 25 per cent. less than that of the preceding year. The records of the State coal mining inspector showed that for the first six months of 1908 the total production was 1,229,146 short tons; it is estimated that the total production for the year will be something over 2,800,000 tons, as compared with 3,680,532 tons in 1907.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1908, according to the United States Department of Agriculture, were as follows: Corn, 332,000 bushels, valued at \$252,000, from 13,000 acres; winter wheat, 14,112,000 bushels, valued at \$11,572,000, from 576,000 acres; spring wheat, 13,050,000 bushels, valued at \$10,701,000, from 870,000 acres; oats, 8,633,000 bushels, valued at \$4,144,000, from 194,000 acres; barley, 5,185,000 bushels, valued at \$3,007,000, from 170,000 acres; rye, 58,000 bushels, valued at \$52,000, from 3,000 acres; potatoes, 4,560,000 bushels, valued at \$3,055,000, from 28,000 acres; hay, 839,000 tons, valued at \$9,229,000, from 373,000 acres. The agricultural development of the State has been greatly stimulated in recent years by several large irrigation projects, undertaken by the United States Reclamation Service. The greater part of the area thus made available is devoted to the production of fruits. (See **IRRIGATION**.) The number of farm animals on Jan. 1, 1909, is estimated as follows: Horses, 320,000; mules, 5,000; dairy cows, 195,000; other cattle, 381,000; sheep, 799,000; swine, 197,000. The wool clipped in 1908 is estimated at 4,080,000 pounds, valued at \$632,000.

EDUCATION. According to the reports of the State superintendent the school population (ages 5 to 21) in 1908 numbered 247,997 and in 1907, 235,061. The total enrollment in public schools in 1908 was 198,214, and in 1907, 188,989. The average daily attendance in 1908 was 142,275, or 71.77 per cent. of the enrollment, and in 1907, 130,750. The private school enrollment in 1908 was 8,580. The average length of the school term in 1908 was 136 days. Only six States west of the Appalachian Mountains and only three west of the Mississippi River had a longer school term. The number of teachers in 1908 numbered 6,424, and in 1907, 6,209. Of these, 5,142 were women. The average monthly salary of men teachers was \$75.65, and of women teachers \$58.99. The number of high schools in 1908 was 217, with a total enrollment of 14,715. The total expenditures for public schools in 1908 were \$7,211,466.68, and in 1907, \$5,649,856. The total value of the permanent school funds and of productive school lands was \$15,585,900, while there were 1,114,469 acres of unleased school land, valued at \$22,411,978. The State educational institutions are the university at Seattle,

the State college at Pullman and State normals at Ellensburg, Cheney and Bellingham.

FINANCE. The report of the State Treasurer for the years Oct. 1, 1906, to Sept. 30, 1908, show a balance in the treasury on Sept. 30, 1906, of \$1,077,560. The total receipts into all funds in that period were \$10,854,281 and the total disbursements, \$11,053,375. Of the amounts received into the general fund, that from taxation amounted to \$2,729,177; from liquor license fees, \$108,175; from the sale and lease of tide lands, \$223,881. The permanent school fund had cash on Sept. 30, 1908, amounting to \$299,909. The State Board of Finance has invested permanent institutional funds to the amount of \$475,850. These funds are: University fund, scientific school fund, agricultural college fund, and other State institutions. The amount of the State debt on Sept. 30, 1908, was \$967,576, which was a reduction of \$125,406 since October, 1906.

CHARITIES AND CORRECTIONS. The Board of Control, which has charge of the charitable and correctional affairs in the State, has full power, by a law of 1907, to govern and manage the following institutions: The Western Washington Hospital for the Insane at Steilacoom, the Eastern Washington Hospital for the Insane at Medical Lake, the State Penitentiary at Walla Walla, the State Training School at Chehalis, the State Soldiers' Home at Orting, the Institution for the Feeble-Minded at Medical Lake, and the State School for the Deaf and Blind at Vancouver. The number of inmates at these institutions on Sept. 30, 1908, was as follows: Western Washington Hospital for the Insane, 1,180; Eastern Washington Hospital for the Insane, 609; State Penitentiary, 920; State Training School, 216; State Soldiers' Home, 327; School for Deaf and Blind, 120; Institution for Feeble-Minded Children, 154. The total expenditures for the maintenance of these institutions for the two years ending Sept. 30, 1908, were \$1,102,095. The Board of Control, in its annual report, recommends the separation of the State School for the Deaf and Blind into two separate institutions. It recommends, also, the construction of new buildings for the State Institution for Feeble-Minded Children, as the present structures are entirely inadequate.

POLITICS AND GOVERNMENT. The local political interest of the year centred in the direct primary elections, held for the first time under the new law, on Sept. 8. The most important question at issue was the Republican nomination for senator. Senator Levi Ankeny was a candidate for reelection, and opposed to him was Wesley L. Jones, a Congressman from the State. A spirited campaign preceded the primary, which resulted in the nomination of Mr. Jones by a decisive plurality. Samuel G. Cosgrove was nominated by the Republicans for governor, defeating Henry McBride, who was the candidate of the faction headed by Senator Ankeny, and also defeating A. E. Mead, the incumbent. The working of the primary law in general gave great satisfaction, but criticism was made by leaders in both parties of the participation of Democrats in the Republican party, and *vice versa*.

CONVENTIONS AND ELECTIONS. The Republican State Convention on May 14 selected delegates to the National Convention, instructed to vote for W. H. Taft for president. The Democratic State Convention instructed the delegates chosen to vote for W. J. Bryan. The results of the primary election are noted in the paragraph above.

**A group of Exposition Buildings showing progress reached six months before the opening of the Fair

**ALASKA-YUKON-PACIFIC EXPOSITION
SEATTLE, WASHINGTON**

In the election of Nov. 3 the Republicans carried the State by a plurality of about 50,000, electing all the State officers. The detailed vote for national and State tickets was as follows: Taft, 106,062; Bryan, 58,691; Chafin, 4,700; Debs, 14,177. Cosgrove, 110,190; — (Dem.), 58,126.

OTHER EVENTS. Arrangements were made in April, after efforts extending over 15 years, for the entrance of the Great Northern Railway into Tacoma over the tracks of the Northern Pacific from Seattle. The Spokane, Portland & Seattle, a J. J. Hill railroad, was completed in September from Pasco to Vancouver. The year was marked by heavy railroad construction in the State. The Chicago, Milwaukee & Puget Sound, an extension of the C., M. & St. P., built across Washington, and the North Coast Railroad also pressed far along construction of a similar line. The Atlantic battleship fleet, commanded by Rear Admiral C. S. Sperry, visited the Puget Sound cities May 21-26. The Alaska-Yukon-Pacific Exposition, arranged for the year 1909, on the ground of the University of Washington, was practically completed as far as its buildings were concerned at the end of 1908. This exposition, which is discussed under **EXPOSITIONS**, promised to be one of the most successful exhibitions ever held in the United States.

STATE OFFICERS. Governor, Samuel G. Cosgrove, Rep.; lieutenant-governor, M. E. Hay; secretary of state, S. H. Nichols, Rep.; treasurer, John G. Lewis, Rep.; auditor, C. W. Clausen, Rep.; adjutant-general, to be named, Rep.; attorney general, W. P. Bell, Rep.; commissioner public lands, E. W. Ross, Rep.

JUDICIARY. Supreme Court: Chief justice, Wallace Mount; associate justices, R. O. Dunbar, H. D. Crow, M. A. Fullerton, F. A. Rudkin, Stephen J. Chadwick—all Rep.; clerk, C. S. Reinhart.

The State Legislature for 1909 is composed of 39 Republicans and 3 Democrats in the Senate, 89 Republicans and 6 Democrats in the House. The State representation in Congress will be found in the article **UNITED STATES**, under the section *Congress*.

WASHINGTON, CITY OF. See **DISTRICT OF COLUMBIA**.

WASHINGTON ACADEMY OF SCIENCE.

A society organized for the assistance of research and the prosecution of any business pertinent to an academy of science, founded in 1898. It acts as a Federal head of the affiliated societies. Its membership in 1908 was 344. It has published ten volumes of proceedings. The president is Charles D. Walcott, and the corresponding secretary is Frank Baker.

WATER PURIFICATION. At the end of 1908 it was evident that the whole of the city of Philadelphia soon would be supplied with water by slow sand filtration. This would give that city a group of plants having by far the largest aggregate water filtering capacity available to any city in the world, and approached only by the various filtration plants under the direction of the Metropolitan Water Board, London, England. Some of the Philadelphia plants had been in use for a number of years previously, with a marked effect in reducing typhoid fever in that city. At Pittsburg, also, the criminally excessive typhoid rate of many years' standing was reduced in 1908 by getting the new slow sand filters into operation. The projected plant for

filtering the Croton supply, New York City, was held up during 1908 by the financial depression and other causes. There was a strong tendency manifested by water engineers to lighten the work of water filters by some preliminary treatment. In the case of rapid or mechanical filters, a coagulant, like sulphate of alumina, has been used for years past, combined with more or less of an opportunity for sedimentation. Recently, coagulants have been recommended for use with slow sand filters, chiefly for temporary use when the water is unusually turbid. The recommendation had been followed in but few instances, as yet, but it was likely to be tried. Already coagulants had been used to hasten the natural deposition of suspended matter in settling reservoirs at water works having no filters. The provision of settling reservoirs, both with and independent of filtration plants, was becoming more common. Double filtration of water is also gaining in favor and use. Generally speaking, the first set of filters to receive the water consist of some coarse material, with high straining efficiency. These are usually known as preliminary or roughing filters, and are more extensively used at Philadelphia than elsewhere. The treatment of water by ozone has been practiced on a relatively small scale at a few European water works plants for some years past, and was adopted at Lindsay, Ont. Several companies were experimenting with the process in the United States. The ozone treatment cannot come into general use until cheaper and less troublesome means of generating ozone have been devised. Lower cost is made all the more necessary by the fact that before the ozone can be applied the organic matter must be removed from the water, or else prohibitively large quantities of the ozone will be consumed in oxidizing the organic compounds and large numbers of bacteria remain unaffected. The processes required to eliminate the organic matter will also reduce the bacteria to such an extent that it hardly pays to go to the expense and trouble of the ozone treatment to effect a further reduction. Instead, it is generally far cheaper and simpler to carry the preliminary or preparatory treatment further and avoid the complication and expense of the high-voltage electric plants required to produce the ozone.

WATER SUPPLY. See **WATER WORKS**; **AQUEDUCTS**; **IRRIGATION**.

WATER WORKS. The enlargement and extension of old works, the addition and improvement of purification plants and measures for the suppression of waste continued in 1908 to be the main features of water-works activity. The examinations and detailed reports of the water-works and other fire protection facilities of the cities of the United States which have been carried on in behalf of the fire insurance interests for some years past are having a salutary effect through analyzing the character and capacity of the several works and pointing out their weak as well as their good features. These reports (by the Committee on Fire Prevention, National Board of Fire Underwriters, 135 William street, New York City) deal with the ownership, organization, source and mode of supply, consumption, pressure, distributing system, valves and hydrants of each water-works examined, besides taking up in like detail the fire department, building department, etc.

Uniform accounts and reports for water-works are given detailed attention in an appendix to a special report of the United States Bureau of the Census published in 1908 ("Statistics of Cities Having a Population of over 30,000: 1908"). The appendix includes a discussion and "tentative classification" of water-works accounts, by Mr. Le Grand Powers, of the Bureau of the Census, and a suggestion for "uniform reports of general and physical data," by M. N. Baker, editor of *Engineering News*. The bulletin just named contains a table of physical and financial statistics of 117 water works owned by cities of 30,000 population and upward in 1906. These works included 24,134 miles of mains, they represented a total capital outlay of \$622,000,000, and a present valuation of \$572,000,000. The outstanding indebtedness on the 117 works was \$281,000,000. The combined gross earnings of the works, including estimates of the value of services rendered the cities, were \$60,000,000, and the gross operating expenses, plus interest on present value, depreciation and an estimated allowance for taxes, were \$55,000,000, showing net earnings of \$5,000,000 (all figures here given in round numbers). It should be understood that few, if any, of the water works of the country make up yearly financial statements on the plan adopted by the Bureau of the Census. The common and very misleading practice is to omit from yearly costs of the water service all interest charges save those on bonds actually outstanding, and also to omit depreciation and taxes (i. e., taxes that would have been paid the city under private ownership. There is also generally omitted from the credit side of municipal water works accounts allowances for fire protection, street and sewer use, city buildings, etc.

Standard specifications for cast-iron water pipe were adopted by the American Water Works Association in 1908. They are largely the same as those adopted by the New England Water Association some years ago. A number of notable railway water supply systems have recently been put into operation, each to supply water stations on many miles of roads. The Indian Creek system for the Pennsylvania Railroad (see *Engineering News*, April 9, 1908) is one of a number of like systems built since 1903 to serve the Pennsylvania Railroad between Philadelphia and Pittsburg, and designed to obviate the water shortages and abnormally high corrosive qualities which have given trouble during recent droughts. The Indian Creek system, for stations near and easterly from Pittsburg, includes a 231,000,000-gallon storage reservoir on that stream, eleven distributing reservoirs with a combined capacity of 49,000,000 gallons, and 135 miles of 36 to 10 inch cast-iron pipe connecting the various reservoirs and water supply stations.

WATSON, THOMAS E. An American politician, candidate of the People's Party for president in 1908. He was born in Columbia County, Georgia, on Sept. 5, 1856, attended Mercer College, Georgia, and was admitted to the bar of that State in 1875. He was a member of the Georgia Legislature from 1882 to 1883, was Democratic elector-at-large in 1888, and a member of Congress (Populist) from 1891 to 1893. As a congressman he was instrumental in securing the first appropriation ever made for the free delivery of mails. In 1896 the People's

Party National Convention nominated him for vice-president. He was also the presidential candidate of the same party in 1904 and in 1908, polling a popular vote of about 117,000 in the former year and of about 90,000 in the latter. He published *Tom Watson's Magazine* in 1905, the publication of which was suspended the following year, when he started *Tom Watson's Jeffersonian Magazine* at Atlanta. He is also the author of *The Story of France* (1898), *Life of Thomas Jefferson* (1900), *Life of Napoleon* (1902), *Life and Times of Thomas Jefferson* (1903), *Bethany, a Study and Story of the Old South* (1904), *Political and Economic Handbooks* (1908), *Waterloo* (1908). See **PRESIDENTIAL CAMPAIGN**.

WEIHAIWEI. A territory on the north coast of the Province of Shantung, China, leased to Great Britain in 1898. Area, 285 square miles; population (1901), 130,792, including 4,000 on the island of Liu Kung. In addition there is a British sphere of influence embracing 1,500 square miles. The native city of Weihaiwei has 2,000 inhabitants. The trade is small. At present the only use of Weihaiwei to Great Britain is as a rendezvous and health resort for the China squadron. The revenue for 1907-8 was estimated at \$71,233 (silver), the expenditure at \$169,528, and the grant in aid at £10,000. The commissioner in 1908 was Sir J. H. S. Lockhart.

WELLESLEY COLLEGE. An institution for the higher education of women at Wellesley, Mass., founded in 1875. In 1908-9 the attendance was 1,283. The college has an endowment of approximately \$1,000,000 and its approximate income is \$500,000. There are 106 officers of instruction and 60,000 volumes in the library. The college has 22 graduate students in residence. A gymnasium and a new dormitory will shortly be added to the buildings of the college. The college offers to graduates a fellowship of \$1,000 per annum and thirty scholarships of \$170 each, and to undergraduates about 50 other scholarships. Work was carried on during the year on the new library, toward which \$125,000 was given by Andrew Carnegie. The president is Miss Caroline Hazard.

WESLEYAN METHODIST CONNECTION IN THE UNITED STATES. An evangelical denomination of Methodist principles, founded in 1843 by members of the Methodist Episcopal Church who strongly opposed slavery. In 1908 the denomination had 19,134 communicants, 600 churches and 524 ministers. In the 499 Sunday schools were enrolled 19,180 scholars and 1,880 teachers. Among the educational institutions controlled by the denomination is Houghton Seminary at Houghton, N. Y. In addition to this, the Educational Board in 1908 authorized the building of a new school of preparatory grade at Miltonvale, Kansas, which is to be ready for use in September, 1909. The Indiana conference also has a school under its own control, but which will soon come under denominational control, and the same may be said of the preparatory school located at Central, S. C. The official paper is the *Wesleyan Methodist*, published at Syracuse, N. Y. The highest authority of the church is the quadrennial General Conference.

WESLEYAN UNIVERSITY. An institution of higher learning at Middletown, Conn.,

founded in 1831. In 1907-8 the attendance was 316 and in the autumn of 1908 it was 320. There are 34 officers of instruction. The university library contains about 78,000 volumes. The endowment is about \$1,500,000 and the annual income is approximately \$200,000. The college has been for several years without a president, but in 1908 Rev. William A. Shanklin, D. D., LL. D., was elected to that office and will be installed at the commencement of 1909.

WESTERN AUSTRALIA. A state of Australia. Area, 975,920 square miles; population at the end of 1906, 261,746. Perth, the capital, had an estimated population of 53,800 on the same date. For details regarding population, education, production, etc., see AUSTRALIA. The executive power is vested in a governor, appointed by the crown and acting through a responsible ministry. The Parliament consists of a Legislative Council of 30 members, elected for six years, and a Legislative Assembly of 50 members, elected for three years. The suffrage for both houses is based upon a property qualification, irrespective of sex. The present governor is Admiral Sir Frederick G. D. Bedford. The premier is Newton James Moore.

On July 20 the government programme was announced by the premier, N. J. Moore. It included the establishment of secondary schools and a university, the building of 400 miles of railway and the amendment of the liquor laws.

WESTERN RESERVE UNIVERSITY. An institution of higher learning at Cleveland, Ohio, founded in 1826. The student enrollment in 1908-9 was 1,016, and the faculty numbered 213. The university includes eight departments: Adelbert College, undergraduate, men; College for Women, undergraduate; Graduate School, Medical School, Dental School, Law School, Literary School and the School of Pharmacy. The university libraries include 93,868 volumes, and the value of grounds and buildings is \$3,400,000. The president is Charles F. Thwing, LL. D.

WEST VIRGINIA. One of the South Atlantic States of the American Union. Its area is 24,170 square miles. The population, according to a Federal estimate made in 1908, was 1,115,606.

MINERAL RESOURCES. In 1907 West Virginia was obliged to yield second place to Illinois in the amount of coal produced, thus making its rank third among the States in production. In spite of this, however, West Virginia's coal production of 1907 showed an increase over the production of 1906 of 4,801,233 short tons in quantity and \$6,794,691 in value. The total amount produced was 48,091,583 short tons, with a spot value of \$47,846,630. The output in 1906 was 43,290,350 short tons, valued at \$41,051,939. The total number of men employed in the coal mines of the State in 1907 was 59,029. In 1907 there were 1,533 machines used in mining, as compared with 1,322 in 1906. There were 729 men killed in the coal mines of West Virginia in 1907, of whom 484 were killed as the result of gas and dust explosions. Most of these perished in the terrible disaster at the Monongah mines of the Fairmount Coal Co. in December. The natural gas output was valued in 1907 at \$16,670,962, as compared with \$13,735,343. Other important mineral products in the State were clay products, building stone, coal products, lime, glass sand,

sand and gravel, salt, and mineral waters; also, unclassified, abrasive materials, bromine, Portland cement, iron ores and zinc. According to figures by the United States Geological Survey, from whose reports the statistics given above are taken, the value of the total mineral production of the State in 1907 was \$92,487,960, as compared with a value in 1906 of \$90,694,588.

Owing to conditions more favorable for the cheap production of coal, the decrease in the output of the State in 1908 was less than that in some other States. It is estimated that the output for 1908 will show a decrease of between 10 and 15 per cent. which will reduce the tonnage to an amount about equal to that of 1906. Most of this decrease is apparent in the northern counties of the State. The report of the State Department of Mines which covered the fiscal year ending June 30, 1908, showed that the production during that period was about 755,000 short tons. There was a decided falling off in the coke-making industry, particularly in the New River Kanawha district, and the prices were unusually low.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1908, according to figures of the United States Department of Agriculture, were as follows: Corn, 23,962,000 bushels, valued at \$18,451,000, from 768,000 acres; winter wheat, 4,693,000 bushels, valued at \$4,834,000, from 361,000 acres; oats, 1,805,000 bushels, valued at \$1,011,000, from 95,000 acres; rye, 130,000 bushels, valued at \$110,000, from 10,000 acres; buckwheat, 378,000 bushels, valued at \$306,000, from 21,000 acres; potatoes, 2,856,000 bushels, valued at \$2,428,000, from 34,000 acres; hay, 899,000 tons, valued at \$9,889,000, from 620,000 acres; tobacco, 4,650,000 pounds, valued at \$651,000, from 6,200 acres. The farm animals, Jan. 1, 1909, numbered as follows: Horses, 195,100; mules, 12,000; dairy cows, 247,000; other cattle, 538,000; sheep, 709,000; swine, 375,000.

EDUCATION. A commission was appointed in July, 1906, to revise the school laws. The result was the issue of the revised and rearranged laws in 1908. Many progressive steps, educationally, are provided by this law, which of itself is a distinct advance in all that relates to the development of education. There is a slow movement toward the consolidation of schools, but district high schools are being established all over the State. The number of volumes in school libraries increased from 49,966 volumes in 1904 to 176,760 in 1908. A statement of the State superintendent gave the school census in 1908 (ages 6 to 21) as 351,966, of whom about 15,000 were colored. The total enrollment was 205,057 and the average daily attendance 165,103. The high school enrollment (in about 60 high schools) was about 4,150. Teachers numbered 8,262, of whom 3,826 were men, a larger proportion of male teachers than in any other State except Arkansas. The average monthly salary of all teachers in 1908 was \$37.66 for all grades of certificates, and the average length of the school term was 135 days. The total expenditure for school purposes was \$4,271,153, of which almost 80 per cent. was raised by local taxation. By a constitutional limitation of 1902, the permanent school fund cannot exceed \$1,000,000, at which amount it has remained for several years.

FINANCE. The report of the treasurer for the period ending Sept. 30, 1908, shows a balance in the State fund of \$278,989. The receipts dur-

ing the year were \$3,382,131 and the disbursements were \$3,482,317, leaving a balance on hand in this fund on Sept. 30, 1908, of \$178,804. The receipts of the general school fund for the year were \$615,264 and the disbursements, \$762,270, leaving a balance on hand, including the balance on hand Oct. 1, 1907, of \$509,352. The aggregate balance in the treasury on Sept. 30, 1908, was \$691,857 and the grand total of all funds in the treasury and invested was \$1,688,157. The receipts from the Morrill fund for the years 1907-8 were \$65,000 and the disbursements, \$61,000.

CHARITIES AND CORRECTIONS. The following sums were expended during the year for charitable and correctional institutions: West Virginia Asylum, \$74,800; Weston Hospital for Insane, \$170,000; Second Hospital for Insane, \$93,150; West Virginia Reform School, \$57,250; Industrial Home for Girls, \$20,400; West Virginia Colored Institute, \$28,600; Bluefield Colored Institute, \$5,550; West Virginia Colored Orphans' Home, \$4,000; West Virginia School for Deaf and Blind, \$9,133. The total charges for criminals for the year amounted to \$68,530.

POLITICS AND GOVERNMENT. A proposed constitutional amendment to prevent the manufacture and sale of intoxicating liquors, except for scientific and medicinal purposes, in the State passed the House of Representatives by a vote of 67 to 12, but was defeated on Feb. 14 in the Senate by a vote of 19 to 11. A conflict between rival factions of the Republican party in the State attained wider than local interest, and an attempt was made to reconcile the opposing forces by President Roosevelt and other Republican leaders. The regular Republican organization nominated for governor Charles W. Swisher. He had the support of Senator Scott and other prominent State Republicans. An organization known as the Lincoln Republicans refused to accept Mr. Swisher as its candidate, and nominated Arnold Scherr, State Auditor, for governor. The leaders of the party claimed that the troubles in the Republican politics of the State were due to the intermeddling of Federal officeholders. After many ineffectual attempts to reconcile the differences of these factions, a compromise was arrived at, by which W. E. Glasscock was accepted as candidate for governor by both.

CONVENTIONS AND ELECTIONS. The Republican State Convention for the nomination of delegates to the National Convention met on April 27 and instructed the delegates chosen to vote for W. H. Taft for president. On May 28 the Democratic State Convention chose delegates instructed to vote for W. J. Bryan for president. The Democratic State Convention for the nomination of candidates for the State ticket selected, on July 30, Louis Bennett for governor. The events in connection with the Republican nomination for governor are noted in the paragraph above. In the election of Nov. 3 the Republicans carried the State for Taft by a plurality of about 26,000, electing Glasscock governor and the entire State ticket. The detailed vote on the national and State tickets was as follows: Taft, 137,869; Bryan, 111,418; Chafin, 5,139; Debs, 3,670. Glasscock, 130,807; Bennett, 118,909.

OTHER EVENTS. On Jan. 30 nine miners were killed in an explosion in the New River colliery, near Hawks' Nest. The breaking down of a train filled with excursionists, near Pennsboro, on

Aug. 20, resulted in the death of 20 persons and the injury of many more.

STATE OFFICERS. Governor, Wm. E. Glasscock; secretary of state, Stuart F. Reed; treasurer, E. F. Long; auditor, John S. Darst; attorney-general, Wm. G. Conly; superintendent of schools, M. P. Shawsley; adjutant-general, N. S. Burlew—all Republicans.

JUDICIARY. Supreme Court of Appeals: President, George Poffenbarger, Rep.; associate justices, Henry Brannon, Rep.; William N. Miller, Rep.; L. Judson Williams, Rep.; Ira E. Robinson, Rep.; clerk, W. B. Mathews, Rep.

The State Legislature for 1909 is composed of 25 Republicans, 5 Democrats in the Senate; 60 Republicans, 25 Democrats and 1 Prohibitionist in the House. The State representation in Congress will be found in the article UNITED STATES, under the section *Congress*.

WETMORE, GEORGE PEABODY. An American legislator, United States senator (Republican) from Rhode Island. He was born in London, England, on Aug. 2, 1846, graduated at Yale in 1867 and at the Columbia Law School in 1869. He was a presidential elector in 1880 and 1884 and was governor of Rhode Island from 1885 to 1887. In 1889 he was an unsuccessful candidate for United States senator, but was elected to that office for the term 1895-1901 and was reelected for the term 1901-07. On Jan. 21, 1908, he was elected for the third time, his term expiring March 3, 1913.

WHEAT. The winter wheat crop matured a little earlier than usual in 1908 and very perceptibly earlier than in 1907. The crop was harvested on July 1 fully 200 miles farther north than on the same date of 1907. The Hessian fly damaged the crop to some extent in the Southwest, the injury being greater in southern Kansas than in any recent year. Heavy rainfall in June also did some damage, especially west of the Missouri River. June weather conditions were very favorable over the spring wheat area. The *American Agriculturist* estimated the condition of winter wheat on July 1 at 83.2 and that of spring wheat at 96.6. Later in the season the spring wheat crop suffered to some extent from drouth, but the crop on the whole was very satisfactory. The secretary of agriculture estimated the production to be 1.5 per cent. above the 5-year average and the total value at 23.3 per cent. above it. The total yield of winter wheat was 437,908,000 bushels, produced on 30,349,000 acres, and of spring wheat, 226,694,000 bushels, grown on 17,208,000 acres, the total area and production for both spring and winter wheat being 47,557,000 acres and 664,602,000 bushels, respectively. The leading winter wheat States were the following: Kansas, 78,182,000 bushels, on 6,108,000 acres; Indiana, 45,169,000 bushels, on 2,721,000 acres; Nebraska, 40,317,000 bushels, on 2,265,000 acres; Ohio, 33,328,000 bushels, on 2,083,000 acres, and Illinois, 30,212,000 bushels, on 2,324,000 acres. Among the spring wheat States the following led in production: Minnesota, 68,557,000 bushels, on 5,350,000 acres; North Dakota, 68,428,000 bushels, on 5,899,000 acres; South Dakota, 37,862,000 bushels, on 2,958,000 acres, and Washington, 13,050,000 bushels, on 870,000 acres. The world's production of wheat in 1907 was 3,108,526,000 bushels, of which the United States furnished 634,087,000 bushels, European Russia, 455,000,000 bushels; France, 369,970,000 bushels; British India, 315,-

386,006 bushels; Austria-Hungary, 185,059,000 bushels, and Italy, 177,543,000 bushels. The United States produces at present about 50,000,000 bushels of durum wheat annually, about half of which is exported. The spring wheat grown in Minnesota and the Dakotas in 1908 was regarded as the best in quality for the last 15 years.

WHEELOCK, JOSEPH. An American actor, died on Sept. 28, 1908. He received his dramatic training in the old stock company school, which aimed at uniform discipline and coöperation in a theatrical company, rather than at the individual brilliance of the performers. Although he never became a star, he was a competent and versatile performer. His most successful work was done in serio-comic plays at the Madison Square Theatre, New York city, under A. M. Palmer's management. He was one of the founders and the first president of the Actors' Home of America.

WHISKEY. See LIQUORS, FERMENTED AND DISTILLED.

WHITEWAY, Sir WILLIAM VALLANCE. A Newfoundland statesman, once premier and attorney-general of Newfoundland, died on June 24, 1908. He was born at Little Hempston, Totnes, Devonshire, England, on April 1, 1828; was educated at the Totnes Grammar School and was called to the bar in Newfoundland in 1852. In 1862 he became a queen's counsel and three years later was elected to the House of Assembly, serving as speaker of that body until 1869. He was delegate to the convention called at Ottawa to consider the question of confederation with Canada, and from 1873 to 1878 was solicitor-general. In 1877, as counsel for Newfoundland before the Fishery Commission at Halifax, he succeeded in obtaining an award of \$1,000,000 for the colony. He was premier and attorney-general of Newfoundland from 1878 to 1885 and again from 1889 to 1897.

WHITTIER, CHARLES ALBERT. An American merchant and soldier, died on the steamship *Mauretania* en route for Europe on May 14, 1908. He was born in Bangor, Me., in 1840, and graduated at Harvard in 1860. He began to study law, but at the beginning of the civil war joined the volunteer army as a lieutenant. He served throughout the war in the Army of the Potomac and at its close was adjutant-general of the Second Corps. After the war he became a successful merchant in Boston. He was appointed an assistant inspector-general with the rank of lieutenant-colonel of volunteers in 1898 and saw service in Cuba and the Philippines, later becoming a brigadier-general, and resigning in 1900. He was afterward interested in the American-China Development Company and in 1905 he sold the Hankow-Canton Railroad, owned by it, to the Chinese government.

WHYTE, WILLIAM PINKNEY. An American statesman, died in Baltimore on March 17, 1908. He was born in Baltimore on Aug. 9, 1824, was admitted to the bar in 1846 and had a long and successful career as a lawyer, although many years of his life were given to the public service. He was in the Maryland Legislature in 1847-48, comptroller of the treasury of that State in 1853-55, United States senator in 1868-69, governor of Maryland from 1871 to 1874, again United States senator from 1875 to 1881, mayor of Baltimore in 1882-83, attorney-general of Maryland from 1887 to 1891, and in 1906 was

again appointed to the Senate, to succeed Senator Gorman, serving until his death. He was a sympathizer with the South during the Civil War and was always a Democrat in politics. He distinguished himself in his first term in the Senate by his able defense of the administration of Andrew Johnson.

WILDER, ALEXANDER. An American physician and author, died on Sept. 19, 1908. He was born in Verona, N. Y., on May 14, 1823, graduated at Syracuse Medical College in 1850 and practiced in Syracuse. In 1852-53 he did editorial work for Syracuse newspapers, in 1858-71 was similarly employed on the staff of the *New York Evening Post*, and thereafter edited the *Transactions of the National Eclectic Medical Association* (1876-95), and of the *Eclectic Medical Society of New York* (1870-72). He also edited the *Metaphysical Magazine*. His many publications include: *Our Darwinian Cousins* (1873), *Serpent and Siva Worship* (1875), *Vaccination a Fallacy* (1879), *Psychology as a Science* (1884), *Paul and Plato* (1885), *Ethics and Philosophy of the Zoroastrians* (1885), *Egypt and the Egyptian Dynasties* (1899), *Ganglionic Nervous System* (1900), and *Evil* (1907).

WILHELMJ, AUGUST EMIL DANIEL FERDINAND. A German-English violinist and concertmaster, died on Jan. 24, 1908. He was born in Usingen, near Wiesbaden, Germany, on Sept. 2, 1845. While he was yet a mere child he was placed by his father, who was himself an accomplished amateur violinist, under the instruction of Conrad Fischer, *kapellmeister* to the Duke of Nassau, with whom he made such progress that at the age of 9 he appeared at a public concert in Wiesbaden. His father, however, still uncertain as to the genuineness of his son's talents, took him to play before Liszt. The latter received him enthusiastically and obtained his admittance to the Leipzig Conservatory, where he studied under David, Hauptmann and Richter (1861-64). In 1864 he went to Frankfort to study under Raff, and a year later made his first concert tour through Switzerland. In 1866 he toured Holland, and in the latter part of the same year played at the Covent Garden Theatre, London, where he was enthusiastically received. In 1867 he scored equally emphatic successes in Paris and Florence. In 1868 he went to St. Petersburg, where he lived for some time with the composer Berlioz. After an extensive tour throughout Europe (1870-74) he went to England, and remained there until 1876. In this year he journeyed to Bayreuth, where he was principal first violin and *concertmeister* at the first performance of Wagner's "Ring" cycle of music dramas. On his return to England he organized the Wagner Festival at London, in 1877, and induced Wagner himself and Hans Richter, Wagner's conductor at Bayreuth, to be present and to participate in the concerts. He made a triumphal tour through the United States in 1878 and then started on a journey around the world, in the course of which he played in nearly every civilized country on the globe. He returned to Germany in 1886, and settled at Blasewitz, near Dresden. In 1892 he was called to London as head professor of the violin at the Guildhall School of Music. He occupied this post until his death.

WILLIAMS COLLEGE. An institution of higher learning at Williamstown, Mass., founded in 1793. The attendance in November, 1908, was

487, about 50 per cent. being from the State of New York. The endowment of the college is \$1,500,000 and the annual income about \$170,000. Henry A. Garfield, who was elected president in 1907, was installed in this office with impressive ceremonies at the beginning of 1908.

WINDWARD ISLANDS. A group of West India islands. Excluding Barbados (q. v.) and Tobago (see TRINIDAD), they constitute a British colony, subdivided into the colonies of Grenada (q. v.) with Carriacou, St. Lucia (q. v.) and St. Vincent (q. v.) with the minor Grenadines. The seat of government is on Grenada. The principal products are mahogany, cedar and other valuable woods, gums, vanilla, sugar, coffee, cacao, spices, fruits, cotton and rubber. The imports in 1907 amounted to £288,665, the exports to £417,299. There is one governor, but no common legislative council, tariff or treasury. Each division is under an administrator, subordinate to the governor—in 1908, Sir Ralph Ch. Williams. The revenue in 1907-8 was £79,871, expenditure, £68,383, and public debt, £123,670.

WINE. See LIQUORS, FERMENTED AND DISTILLED; FRANCE.

WINTER CHOLERA. A generic term popularly applied to a form of intestinal disorder appearing during the cold season in cities and towns along the shores of the Great Lakes. It is characterized by symptoms varying in intensity from a slight bowel disturbance lasting two or three days to a clinical picture resembling in its severe toxemia and collapse, true Asiatic cholera. Epidemics of the disease occurred in several widely separated localities in 1908. Lansing and Escanaba, Mich., suffered most, but many scattered epidemics were reported from Ohio, Wisconsin and contiguous States. The disease was found on investigation to be due solely to sewage contaminated drinking water, the shallow margin of the lakes serving both as a receptacle for sewage and a source of public water supply. As might be expected, the disease is not due to a specific germ, but is caused by a mixed infection of several intestinal bacteria, those of typhoid and dysentery being found in the dejecta of victims of the disorder. Individual cases take on the characteristics of the predominating infection. The advent of the disease in the winter months is explained by Breitenbach in the *Journal of the American Medical Association* by the absence of the purifying effects of sunlight on these shoal waters, and the stagnation caused by ice formation.

WIRELESS TELEGRAPHY. In the department of wireless telegraphy the ratification by the governments of the world of the Berlin convention of 1906 (the regulations adopted by which came into operation on July 1, 1908) has given a great impetus to the development of wireless stations and the standardization of wireless telegraphy methods. A number of important stations of long range were erected and equipped in various parts of the world; two by the United States government at Nome and Fort Gilbert, Alaska, numerous stations equipped by the Canadian government throughout Canada, a privately owned station on the Caribbean coast giving service to South America, a station in Hawaii communicating directly with San Francisco, a distance of 2,000 miles, and numerous others. The station in Paris, using the Eiffel tower as a mast, is being equipped with

new and powerful apparatus with the expectation of getting into direct communication with New York. Transatlantic communication by the Marconi Company between Glace Bay, Nova Scotia, and Clifden, Ireland, has been carried on with a certain degree of commercial success since the opening of this service in Oct., 1907, but the business done by this company, compared with that which passes over the Atlantic cables, is very small. On his visit to Canada, aboard the *Indomitable*, the Prince of Wales was able to exchange messages constantly with other members of the royal family, on both the outward and the homeward bound voyages, by way of the high power stations at Clifden and at Glace Bay. The strategic value of wireless is, therefore, immense. On the financial side there had grown up a feeling of distrust in new wireless enterprises, and this was confirmed by the failure in 1908 of the Amalgamated Radio Telegraph Company, which had a nominal capital of \$2,250,000.

WIRELESS TELEPHONY. The development in wireless telephony during 1908 was chiefly along the lines previously established. The apparatus employed was considerably improved and the distance of transmission correspondingly increased. For regular service a distance of 50 nautical miles is the maximum that can yet be counted on, although under certain special conditions distances up to 250 miles have been covered. The wireless telephones installed on the Pacific fleet of the United States in 1907 were said to have been a success, and the results of the tests made by the British admiralty in Sept., 1908, were even better than anticipated. Messages were sent, by the De Forest system, from the cruiser *Furious* and the destroyer *Veloce*, out at sea, to the Vernon Torpedo depot in Portsmouth Harbor, a distance of 40 miles, the Hertzian waves having to cross the Isle of Wight to reach Vernon.

WISCONSIN. One of the North Central States of the American Union. Its area is 56,066 square miles. The population according to a Federal estimate made in 1908 was 2,356,874.

MINERAL RESOURCES. According to figures given by the United States Geological Survey, the aggregate value of mineral products in the State fell from \$21,805,775 in 1906 to \$13,832,395 in 1907. The most valuable single products of the State are stone products, which were valued in 1907 at \$2,492,141, an increase over the figures of 1906, which were \$1,871,945. In 1906 the most valuable product was mineral water, which, in 1907, however, fell to \$1,526,703 from a value of \$2,422,694 in 1906. The clay products in the State were valued in 1907 at \$1,127,819, as compared with \$1,227,342. The value of the zinc produced in the State in 1907 was \$1,802,214, a substantial increase over the value in 1906, which was \$1,348,954. The value of the lime produced in 1907 was \$733,996, a decrease over the value of 1906, which was \$769,808. Among other important mineral products of the State are lead, sand and gravel, cement, coke, graphite, metallic paint, pig iron, crystalline quartz, and zinc white.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1909, according to the figures of the United States Department of Agriculture, were as follows: Corn, 49,674,000 bushels, valued at \$30,301,000 from 1,474,000 acres; winter wheat,

1,228,000 bushels, valued at \$1,130,000 from 63,000 acres; spring wheat, 2,100,000 bushels, valued at \$1,932,000 from 120,000 acres; oats, 73,085,000 bushels, valued at \$34,350,000 from 2,350,000 acres; barley, 24,750,000 bushels, valued at \$14,355,000 from 825,000 acres; rye, 5,225,000 bushels, valued at \$3,710,000 from 275,000 acres; buckwheat, 304,000 bushels, valued at \$231,000 from 20,000 acres; flaxseed, 400,000 bushels, valued at \$460,000 from 25,000 acres; potatoes, 20,160,000 bushels, valued at \$12,096,000 from 252,000 acres; hay, 3,988,000 tons, valued at \$31,904,000 from 2,346,000 acres; tobacco, 39,550,000 pounds, valued at \$3,955,000 from 35,000 acres. The production of beet sugar in 1908 was estimated at 20,500 long tons. The numbers of farm animals by thousands on Jan. 1, 1909, were as follows: Horses, 662,000; mules, 5,000; dairy cows, 1,462,000; other cattle, 1,114,000; sheep, 1,044,000; swine, 1,834,000. The wool clipped in 1908 was estimated at 5,312,000 pounds, valued at \$1,063,750.

EDUCATION. The law enacted in 1907 granting special State aid of fifty dollars per year for a period of three years to ungraded rural schools, provided certain requirements in the way of heating and ventilation and other equipments were complied with, has already been taken advantage of by 3,093 out of a total of 6,466 schools. This has contributed greatly to the health and comfort of the children attending such schools and has made the schools more efficient in general. The Legislature of 1907 enacted a law increasing from twelve to twenty the number of county training schools for rural school teachers, which may be established and receive special State aid. The full number of such schools has been established, and, as other counties desire that their teachers should have the advantages of the training which these schools afford, it is not unlikely that the Legislature of 1909 will provide for an increase in their number.

The report of the superintendent of education for the school year ending June 30, 1908, shows the number of children in the State of school age, 775,607; number enrolled in the public schools, 464,771; the average daily attendance, 309,415. The number of teachers in the public schools was 14,659. The total enrollment in the three four-year high schools was 24,287. The average monthly salary of the male teachers under city superintendence was \$113.76; in schools under county superintendence, \$64.27; the average monthly salary of female teachers in schools under city superintendence was \$53.69, and in schools under county superintendence \$40.81. The permanent school fund of the State on June 30, 1908, was \$3,845,529. The school fund apportionment made in Dec., 1908, was \$1,765,281. The total expenditures on graded and ungraded schools during the year was \$10,694,294.

FINANCE. The statement of the State treasurer showed a balance of all funds July 1, 1907, of \$1,279,586.79. The receipts for the fiscal year following, July 1, 1908, were \$10,417,473.49; disbursements from July 1, 1907, to July 1, 1908, were \$9,969,012.49, leaving a balance on hand July 1, 1908, of \$1,728,047.79. The accounts are carried under twenty-nine different funds, of which the general fund, the school fund income, and the funds of the various State educational institutions are the most important.

The different sources of revenue for the general fund are: Railway companies' license funds, 5 per cent.; life and fire insurance company taxes, 10 per cent.; legacy tax, 5 per cent. The school funds income, which is apportioned to counties, is derived mainly from the one mill tax. The total assessed valuation for the fiscal year 1908 was \$2,478,561,786, of which about 75 per cent. was realty. There is no State debt, except \$2,251,000, held in the trust funds for educational purposes.

CHARITIES AND CORRECTIONS. During the last biennial period many improvements were made in the various institutions of the State. A sanitarium for tuberculosis in the incipient form was opened at Wales Nov. 1, 1907, at a cost of approximately \$200,000. In the latter part of 1908 there were about 80 patients. At the Wisconsin Workshop for the Blind in Milwaukee, there were in 1908 nearly 50 blind artisans. The State in 1908 completed three dormitories at the Wisconsin Home for Feeble-Minded, which will give that institution an additional capacity of 300. The cost of this improvement was about \$75,000. A new cell wing was completed at the Wisconsin State Prison, which increases the capacity of that institution about 300, the cost of the improvement being about \$200,000. A Bindery Twine Plant was erected during the year at the State prison, which cost the State about \$250,000. A \$75,000 addition was built at the State Reformatory. About \$50,000 worth of additional buildings were constructed at the School for the Deaf at Delavan, and about \$20,000 worth of buildings at the School for the Blind at Janesville. The insane population of the State on Aug. 30 was 6,205. Of this number there were 4,131 in the county asylums, and 1,892 in hospitals for treatment of the acute insane. The current expenses of the county asylums amounted to \$633,264.69. The population of the State institutions at the close of the fiscal year 1908 was as follows: State Hospital, 608; Northern Hospital, 625; School for the Deaf, 199; School for the Blind, 85; Industrial School for Boys, 364; State Prison, 653; State Public School, 181; Home for Feeble-Minded, 757; State Reformatory, 280; Tuberculosis Sanitarium, 75. The total current expenses of the institutions for that period were \$659,299.02. This amount was exclusive of expenditures for buildings and improvements.

POLITICS AND GOVERNMENT. The chief local political event of the year was the primary election held on Sept. 1. The main issue was the nomination for United States senator for which Senator Isaac Stephenson was a candidate for reelection. He was the successful candidate at the primary, although the nomination was strongly opposed by Senator La Follette, largely through whose efforts the primary law was passed, and who had formerly received the assistance of Mr. Stephenson in bringing about legislation on railroad and other matters, which has made the State notable. The movement for no-license received a setback in the local elections held on April 7, when a majority of the towns voted for license. The question was at issue only in the smaller cities and towns of the State. The Federal nine-hour law, governing the length of time railway telegraphers may work, was declared unconstitutional by Judge Tarrant, at Milwaukee, on April 14, while at the same time he decided the State eight-hour law valid. The decision is based on the ground

that the Federal government exceeds its authority when it attempts to regulate intra-State commerce. Suit was brought on Jan. 13 against the Chicago, Milwaukee and St. Paul railroad for knowingly violating the eight-hour employee law, which went into effect on Jan. 1. The suit is a test case and will be carried through the courts as rapidly as possible. On Nov. 1, the first conviction was obtained under the anti-tipping law, passed in 1905. In January, twenty-three foreign life insurance companies left the State as the result of legislation passed in 1907.

CONVENTIONS AND ELECTIONS. The Republican State convention for the selection of delegates to the national convention chose delegates instructed to vote for W. H. Taft for President. The Democrats on Feb. 14 chose delegates to the national convention instructed to vote for W. J. Bryan. The results of the local election held on April 7 are indicated in the paragraph above. In the primary elections described in the preceding paragraph candidates for governor were also nominated. Gov. J. O. Davidson received the Republican nomination and John A. Aylward the Democratic. In the elections of Nov. 3 the Republicans carried the State for Taft by a plurality of about 75,000, electing the entire State ticket. The detailed vote on national and State tickets was as follows: Taft, 247,747; Bryan, 166,632; Chafin, 11,564; Debs, 28,164. Davidson, 242,935; Aylward, 165,977.

OTHER EVENTS. The severest drought in the State in many years was accompanied in September and October by disastrous forest fires, which caused the loss of several lives and the destruction of property valued at millions of dollars.

STATE OFFICERS. Governor, J. O. Davidson; lieutenant-governor, John Strange; secretary of state, James A. Frear; treasurer, Andrew H. Dahl; adjutant-general, C. R. Boardman; attorney-general, Frank L. Gilbert; State superintendent of schools, C. P. Cary; commissioner of insurance, Geo. E. Beedle—all Republicans.

JUDICIARY. Supreme Court: Chief justice, John B. Winslow, Dem.; associate justices, Wm. H. Timlin, Rep.; R. G. Siebecker, Rep.; J. E. Dodge, Dem.; Roujet D. Marshall, Rep.; John Barnes, Dem.; J. C. Kerwin, Rep.; clerk, Clarence Kellogg, Rep.

The State Legislature of 1909 is composed of 28 Republicans, 4 Democrats, and 1 Social Democrat in the Senate, 80 Republicans, 17 Democrats, and 3 Social Democrats in the House. The State representation in Congress will be found in the article UNITED STATES under the section Congress.

WISCONSIN, UNIVERSITY OF. An institution of higher learning at Madison, founded in 1848. The attendance in 1907-8 was 4,013; for 1908-9 over 4,500. The enrollment in the former year was distributed as follows: College of letters and science, 1,760; college of engineering, 921; college of agriculture, 694; graduate school, 443; college of law, 157; school of music, 150; course in pharmacy, 32; college of medicine, 25. In addition to this number the correspondence course registration was over 1,400. The summer session of 1908 had 1,027 students, including those in the graduate school, college of letters and science, engineering, agriculture, law and medicine. There were 395 offices of instruction. The income of the university is over \$1,100,000,

practically all of which is received from the State and from the United States government. The Legislature has recently provided \$300,000 annually for the construction of new buildings. The building for animal husbandry and the woman's gymnasium and clubhouse were completed in 1908. By the will of William F. Vilas, of the class of '58, the university will receive an endowment of over \$2,000,000 for a memorial theatre, for research professorships and for graduate fellowships. New chairs were established in mining, engineering, and in pathology, pharmacology and toxicology in 1908. New courses have recently been added in chemistry, agricultural training of teachers, and journalism. The work in medicine has been extended to include the first two years of a standard medical college course. In 1907-8 566 degrees were granted of which 22 were the degree of Ph.D. and 83 were the Master's degree. The president is C. R. van Hise.

WISTER, ANNIS LEE (FURNESS). An American writer known for her translations from the German, died on Nov. 15, 1908. She was born in Philadelphia in 1830. In 1864 she began publishing her translations of well-known German novels. Chief among many books that she translated are: *Old Mam'selle's Secret* (1868); *The Second Wife* (1874); *Violetta* (1886); and *The Owl's Nest* (1888). In 1888 she published a complete edition of her translations in 30 volumes. She also published (in collaboration with Dr. F. H. Hedge) *Metrical Translations and Poems* (1888).

WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL. An organization for the promotion of temperance and for kindred purposes, organized in Nov., 1874, at Cleveland, Ohio. It had in 1908 about 10,000 local unions with a membership, including children's societies, of over 600,000. Forty distinct departments of work (under six divisions, I, Organization; II, Preventive; III, Education; IV, Evangelistic; V, Social, and VI, Legal), presided over by as many women experts, are conducted by the organization, which claims that largely through its influence, every State in the Union has on its statute books laws requiring the study of scientific temperance in the public schools. The organization has also secured many laws prohibiting the sale of tobacco to minors; raising the age of consent; providing for the better protection of women and girls; the appointment of police matrons; the establishment of industrial homes for girls and of houses of refuge for erring women, and has done various other legislative work of an important and elevating character. It publishes two papers, *The Union Signal*, a weekly journal of the temperance reform, and *The Crusader Monthly*, for young people. President, Mrs. Lillian M. N. Stevens, Portland, Maine; vice-president-at-large, Miss Anna A. Gordon, Evanston, Ill.; corresponding secretary, Mrs. Frances Pride Parks, Evanston, Ill.; recording secretary, Mrs. Elizabeth Preston Anderson, Valley City, N. D.; assistant recording secretary, Mrs. Sarah H. Hoge, Lincoln, Va.; treasurer, Mrs. Elizabeth P. Hutchinson, Evanston, Ill.

WOMAN'S COLLEGE OF BALTIMORE. An institution for the higher education of women at Baltimore, founded in 1888. The college has only one course of study leading to the one degree of Bachelor of Arts. Much of its curric-

ulum is required. The attendance in 1908 was 341 students, with 28 teachers. Dr. John Franklin Goucher resigned as president in Nov., 1907, after twenty years of successful administration. Rev. Eugene Allen Noble was chosen to succeed him. The plant of the college is valued at \$1,400,000; its endowment is estimated at \$700,000 and its expenditures at \$70,000.

WOMAN SUFFRAGE. Like its predecessor the year 1908 was a notable one in woman suffrage annals. While the record for 1908 discloses fewer practical successes, it shows an aggressive agitation attracting world-wide attention. In England, the United States, France, Holland, Denmark, Scandinavia, Switzerland, Bulgaria, South Africa, Victoria and even in Japan and Turkey, the extremes of Asia, the woman's movement compelled attention. England was the chief storm centre. There the movement is carried on mainly by the National Union of Suffrage Societies and the Woman's Political and Social Union, representing respectively the conservative and the radical elements. The Women's Freedom League also represents a radical element. The members of the radical groups, commonly called "suffragettes," a name first given in derision but adopted by the agitators themselves, continued the aggressive and militant policy begun in 1907, and even many conservatives joined in. They organized street parades and monster demonstrations; they attempted to "rush" the House of Commons; they displayed everywhere large signs bearing their battle cry, "Votes for women"; and they continually "pestered" members of the government on public occasions by means both legal and illegal. On June 13 occurred in London a parade of fully 10,000 women, followed by a meeting in Albert Hall, where several notable speeches were made. On June 21 a huge demonstration was made in Hyde Park. This was said to have been the largest political demonstration ever held. Women came to London on more than thirty special trains and reached the park in seven different processions. Resolutions were passed and a copy was delivered by Miss Christabel Pankhurst to Premier Asquith. Another great demonstration was that of June 30, when tens of thousands of persons packed themselves into Parliament Square and neighboring streets while the House of Commons was in session. Several thousand special and mounted police were required during several hours to maintain order. Again on Oct. 13 Parliament was rushed by a crowd numbering fully 50,000. As a result of this outbreak Mrs. Pankhurst and other leaders were arrested and sentenced to three months' imprisonment, they having refused to give bond to keep the peace. A special feature of the year's agitation in England was the activity of the women in by-elections. They claimed to be instrumental in the defeat of at least fifteen of the government's candidates. As one instance among many of the methods adopted to force themselves on public attention may be cited the interruption and final defeat of an attempt by Mr. Winston Churchill to make a speech at Dundee. His opponent was a daring suffragette armed with a large bell. Still more notorious was the incident of Nov. 8, when two suffragettes chained themselves to the lattice work in front of the women's gallery in the House of Commons and began shrilly to demand votes for women. They were released only

by tearing away part of the lattice and filing their chains. The disorder resulting from these tactics led to many arrests, and more than two score of the leaders were sentenced to jail. A more or less organized anti-suffrage movement developed during the year. This was led by the novelist, Mrs. Humphry Ward, and founded its basis in the contention that the majority of women, and particularly those of the more intellectual classes, do not desire the suffrage. Tending to offset the force of this contention was the success attending the organization and development of suffrage sentiment among the women workers in the mills of Lancashire and Cheshire. A considerable number of working women's societies having both industrial and political purposes, were affiliated with the National Union of Suffrage Societies. Their appeal was made mainly to working men and rested on the plea that industrial rights and the improvement of industrial conditions can be secured only by the use of political power. The chances of success in England were apparently greatly reduced by the accession of Mr. Asquith, an avowed opponent, to the premiership, in succession to Mr. Campbell-Bannerman. Under the lead of the latter the House of Commons on Feb. 28 voted in favor of a woman suffrage bill by 271 to 92 on its second reading. The government, however, steadily refused to allow the bill to reach a final reading. The new premier has consented to favor a woman suffrage measure provided that it be sufficiently democratic and that an overwhelming majority of women be shown to desire the ballot.

In March and April the methods of the English suffragettes were communicated to the United States through a visit of Mrs. Borrmann Wells and other English agitators. They organized the Progressive Woman Suffrage Union in New York city. Frankly sensational methods of compelling attention, such as street parades and open air meetings on street corners, were adopted. Preceding the visit of the English suffragettes the Interurban Suffrage Club of New York city had held a series of public meetings including a legislative hearing at Albany (Feb. 19) and a big rally at Cooper Union (Feb. 27). Late in May and early in June a group of suffragists led by Mrs. Harriet Stanton Blatch traveled by trolley up the Hudson valley holding open air meetings. The most notable of these was held at Poughkeepsie near Vassar College. In June a proposed amendment to the Oregon constitution granting equal suffrage to women was defeated by a large majority in the referendum vote. The most effective argument used against the proposal was that the majority of women did not care for the ballot. The leaders at once began a new campaign and in September filed an initiative petition which will bring the matter before the voters again in 1910.

In July the Iowa Supreme Court sustained the right of women of that State under a law of 1894 to vote on questions of taxation. The new constitution of Michigan, ratified in November, gives taxpaying women the right to vote on questions involving the expenditure of public funds. Efforts to secure the adoption of suffrage planks by the national conventions of the Republican and Democratic parties were unsuccessful. The agitation of the subject along suffragette lines was revived early in December, through the coöperation of English and Ameri-

can leaders. Notable suffragist and anti-suffragist meetings were held in New York city on Dec. 4. The anti-suffragist meeting, held under the auspices of the National League for the Civil Federation of Women, was addressed by Rev. Dr. Lyman Abbott, and heard letters from President Roosevelt and Elihu Root. This meeting was invaded by a few suffragettes who succeeded in creating considerable disturbance. The other meeting, held at Carnegie Hall, was probably the largest demonstration ever held in this country in the interest of woman suffrage. Addresses were made by Mrs. Philip Snowden, an English leader of the movement, and by New York clergymen.

The immediate result of the year's agitation in the United States has been to arouse widespread interest in the question and to secure expressions of opinion from many, in positions of power. While the agitation has centred at New York city, the suffragists claim to have made progress in California, Oklahoma, Wisconsin, Georgia, Louisiana, South Dakota, Indiana and Washington. At the meeting of the National Woman Suffrage Convention at Buffalo in October a National Council of College Equal Suffrage Leagues was formed, as a result of interest among college women.

The International Woman Suffrage Alliance meets in the United States in 1909. The 1908 congress of this alliance was held at Amsterdam, Holland, in July. Delegates to this congress came from Sweden, Germany, Austria, Hungary, Russia, Bohemia, Bulgaria, Italy, Switzerland, Belgium, Great Britain, United States and South Africa, and Australia, Norway and Denmark, those from these last three countries being officials. All delegations reported progress toward the achievement of political equality. The overthrow of the liberal government early in the year had carried with it the proposal of the liberals to enlarge the franchise by constitutional revision so as to include men and women on equal terms.

This defeat of a bright prospect in Holland was partially offset by the granting of the municipal suffrage to women on the same terms as that exercised by men by the Danish parliament. This stimulated the woman suffragists of Denmark to active agitation for the parliamentary suffrage. A national association with 8,000 members was formed and on the last Sunday in July forty meetings were held in different cities to discuss the issue. France seems not to have experienced an organized campaign of agitation, but nevertheless had the question brought forward in a practical manner through the candidacy of Mlle. Jeanne Laloë for election to the Municipal Council of Paris on the Socialist ticket. She was hailed as the first French suffragette and her candidacy fell little short of success. The legality of her candidacy was disputed but settled temporarily in her favor. The large vote she received, taken in connection with socialist favor for female suffrage and with the strength of socialism in France, points strongly toward practical success in that country. In Norway the council has proposed a modification of the law of 1907 whereby 300,000 women received the full franchise, so as to grant suffrage to women on equal terms with men. In Finland twenty-five women sat in Parliament as against nineteen in 1907. In November Victoria, Australia, granted women the right to

vote for members of the State parliament. Women thus possess right in all Australia to vote for members of State and national parliaments.

WOMEN IN INDUSTRY. One of the most important court decisions of the year affecting labor was the decision of the Supreme Court of the United States in the case of *Muller vs. State of Oregon*. Muller, the proprietor of a laundry in Portland, Ore., was convicted of employing adult women more than ten hours per day, thus violating a State law of 1903 forbidding the employment of adult women for more than a ten-hour day in factories, mechanical establishments, and laundries. This law being upheld as constitutional by the Oregon Supreme Court in 1906, Muller appealed his case to the United States Supreme Court. This court affirmed the constitutionality of the law. While this case dealt with the employment of women in laundries, it was nevertheless considered by the friends of the protection of female workers, as a test case of the power of States to limit the freedom of contract of adult women. Mr. Louis D. Brandeis, of Boston, donated his services and in cooperation with Miss Josephine Goldmark of the National Consumers' League, submitted a most comprehensive and telling brief. The unusual character of this brief consisted in the fact that it was devoted not only to the legal aspects of the case, but to the physical, moral and economic effects of long hours for women workers. This brief furnished the basis and tenor of the court's decision, handed down Feb. 28. On the broad ground of the difference in the physical constitution and functions of women as compared with men, the court held the State justified in exercising its police power in special legislation with reference to the conditions under which she works. Justice Brewer, for the court, said: "As healthy mothers are essential to vigorous offspring, the physical well-being of woman becomes an object of public interest and care, in order to preserve the strength and vigor of the race." Being based on such broad grounds the decision lays a solid basis for the constitutionality of State laws in general, limiting the hours of women's work to such as shall certainly be no menace to health. The great importance of this decision is apparent when it is known that twenty States now have statutes similar to the Oregon law, but much doubt has existed as to their constitutionality.

The efforts of the National Trade Union League to arouse a feeling of solidarity and of community of interests among working women met with considerable success during 1908. The league is stimulating the formation of unions among women workers in the industrial centres of the United States. New organizations were formed in 1908 at Detroit, Milwaukee and St. Louis. In the fall three days' sessions of the league were held at Chicago and New York and a shorter one at Boston. At Chicago 77 delegates were present, 55 from Chicago and the others from 21 cities in ten different States. At New York 75 delegates were present representing cities in Connecticut, New York, New Jersey, Delaware and Pennsylvania. At Boston delegates from Fall River, Brockton and other centres assembled for one afternoon's discussions. It is believed that these meetings will not only bring about a sympathetic feeling among women workers which will make possible common action, but will also discover and

develop the leadership existing in the ranks of working women. The Massachusetts Legislature reduced the number of legal hours for women's work from 58 to 56 per week, except in seasonal trade, when the average for the year must not exceed 56 hours per week.

SPAIN. A decree issued in March for the first time introduced in Spanish law a limitation on the employment of women in certain harmful industries. The law applies to all children under sixteen and to all women under twenty-five years of age. Among the places prohibited to these workers are chemical works, match factories, type foundries, glass and lead works, and slaughter houses. This new law taken in connection with recently promulgated decrees prohibiting the night work of children under fourteen and limiting the hours of children between ten and fourteen years of age to six hours a day in mills and factories and to eight hours in shops and offices, gives Spain a high rank in the present movement for the protection of women and children in industry. See **CHILD LABOR**.

WOMEN'S CLUBS, GENERAL FEDERATION OF. A body organized in 1892. It is composed of more than 4,500 women's clubs, having a membership in the United States and foreign countries of about 800,000. Clubs applying for membership must contain no sectarian or political test in their constitution, the object of the federation being social, literary, artistic, or scientific culture. The officers in 1908 were as follows: President, Mrs. Philip M. Moore; first vice-president, Mrs. Josiah M. Cowles; second vice-president, Mrs. John Dickinson Sherman; recording secretary, Mrs. Henry H. Dawson; corresponding secretary, Mrs. Frank M. Shiek; treasurer, Mrs. George O. Welch; auditor, Mrs. L. L. Blankenburg.

WOOL. See **STOCK RAISING**, section *Sheep*.

WORMELEY, KATHERINE PRESCOTT. An American author and translator, died on Aug. 4, 1908. She was born of American parents at Ipswich, England, in 1829, and came to the United States at an early age. During the Civil War she was connected with the United States Sanitary Commission, served as nurse on board the Federal hospital transports, and became superintendent of nursing at the Lovell Hospital in Portsmouth Grove, R. I. She published a history of the United States in 1863. At the close of the rebellion she published an account of her war-time experiences under the title *The Other Side of the War*. Another volume on the same subject, *The Cruel Side of War*, appeared in 1899. She became well known for her translations from the French, which include an edition of Molière's plays (1892), and the famous *Works of Honoré de Balzac* (40 vols., 1883-97), which is the standard English translation of that author.

WORTHINGTON, GEORGE. Second Protestant Episcopal bishop of Nebraska, died on Jan. 7, 1908. He was born in Lenox, Mass., on Oct. 14, 1840. After a brief business career he graduated at Hobart College in 1860, and at the General Theological Seminary in 1863. In 1864 he was ordained priest. After serving various rectorships in New York he went to Detroit in 1868, where he remained until 1875. In 1884 he was offered the bishopric of Nebraska, but declined. In 1885, however, on being again offered this office, he accepted it. In 1901 ill health compelled his removal to New York

city, although he still retained the administration of his Nebraska diocese. From this date until his death he also had charge of the Protestant Episcopal churches of Continental Europe.

WRESTLING. The national championships of the Amateur Athletic Union were decided at Madison Square Garden Concert Hall on April 13. The events and winners follow: 105 pounds, R. Schwartz, Boys' Club, New York; 115 pounds, G. Mehnert, Turn Verein, Newark; 125 pounds, L. A. Dole, Yale University; 135 pounds, G. S. Dole, Yale; 145 pounds, M. Weily, German-American A. C.; 158 pounds, C. Anderson, Swedish Gymnasium, Boston; heavyweight, J. Gunderson, Dover Sporting Club, New York. In the professional wrestling world there were two important bouts. George Hackenschmidt defeated Joe Rogers in two falls, and Frank Gotch won the heavyweight championship from Hackenschmidt, when the latter refused to continue after an hour and forty-five minutes had elapsed without either scoring a fall. The fourth annual intercollegiate championships were won by Yale with a total score of 10 points. Pennsylvania scored 6, Princeton and Cornell 3 each, and Columbia 0. Events and winners were: 115 pounds, Yerger, of Pennsylvania; 125 pounds, L. A. Dole, of Yale; 135 pounds, G. S. Dole, of Yale; 145 pounds, Waite, of Pennsylvania; 158 pounds, Parker, of Yale; 175 pounds, Foster, of Yale; heavyweight, Talbot, of Cornell. See **OLYMPIC GAMES**.

WRIGHT, JOHN HENRY. An American archaeologist, died on Nov. 25, 1908. He was born at Urumya, Persia, on Feb. 4, 1852, graduated at Dartmouth in 1873, and later studied at Leipzig. In 1878 he became associate professor of Greek at Dartmouth. During 1886-7 he was professor of classical philosophy at Johns Hopkins. In the latter year he was appointed professor of Greek at Harvard, and became dean of the graduate school in 1895. During 1906-7 he was president of the American School of Classical Studies at Athens. He edited the *American Journal of Archaeology* from 1897 to 1906 and was also editor of *A History of All Nations* (24 vols., 1902).

WRIGHT, LUKE E. An American diplomat, and secretary of war. He was born in Tennessee in 1847. He studied law and began practice in Memphis, Tenn. For eight years he was State attorney-general. He was a Democrat in political belief, but declined to support Bryan in 1896, and allied himself with the "gold" wing of the Democratic party. From 1900 to 1904 he was a member of the United States Philippine Commission, serving as president from 1903 to 1904, when he became civil governor, succeeding William H. Taft. Later he was appointed governor-general, which position he held until 1906. He was ambassador to Japan from 1906 to 1907, and on July 1, 1908, took the war portfolio in President Roosevelt's cabinet. In 1903 he received the degree of LL.D. from Hamilton College.

WRIGHT, ORVILLE and WILBUR. American inventors and aeronauts. Both in Europe and the United States, they were the most important figures in the aeronautical developments of the year. Their heavier-than-air machine were successfully tested in 1908. Orville was born in Dayton, Ohio, on Aug. 19, 1871, a son of Bishop Milton Wright of the church of United Breth-

ren in Christ, and had a public school education. Wilbur was born near Millville, Ind., on April 16, 1867, and also was educated in the public schools. They began to study aviation in about 1896, at which time they had in Dayton a small shop in which they repaired and built bicycles, and four years afterward were making actual experiments with machines of their own invention and manufacture. By 1903 they had produced a machine in which they could remain in the air a minute at a time; and by 1905 they had so improved their machine that they could rise or descend practically at will, describe curves, and remain in the air for several minutes. In 1906 they built several machines, and in May, 1908, they conducted a number of public experiments at Kill Devil Hill, N. C. For their subsequent remarkable performances, and a description of their machines, see AERONAUTICS.

WÜLLNER, ADOLF. A German physicist, died in Oct., 1908. He was born in Düsseldorf on June 13, 1835, studied physics at Bonn, Munich and Berlin, and after teaching at Marburg, Aix-la-Chapelle and Bonn, became professor in the technical school at Aix. He made special investigations of the specific heat of liquids and gases; of vapor tension, refraction indices and the variability of absorption and emission spectra. His publications include: *Lehrbuch der Experimentalphysik* (1862, 6th ed., with Hagenbach, 1907); *Einleitung in die Dioptrik des Auges* (1866), and *Kompendium der Physik* (2 vols., 1879).

WYCKOFF, WALTER AUGUSTUS. An American sociologist, died on May 15, 1908. He was born in Mainduri, India, on April 12, 1865, graduated at Princeton in 1888, and for a year studied and traveled in Europe. In July, 1891, he traveled on foot across the American continent, starting without any money and determined to make his living as a day laborer. In this way he spent eighteen months working as a farm hand, on railroads, as a hotel porter, as a lumberman, and in many other occupations of the daily wage-earner. The results were incorporated in the books, *The Workers—East* (1897), and *The Workers—West* (1898), wherein he reveals a breadth of understanding unequalled in the whole literature of sociological vagabondry of which his books were the pioneers. In 1893 and 1894 Mr. Wyckoff was employed as a private tutor, and traveled twice around the world. He was appointed social science fellow at Princeton in 1884, lecturer on sociology there in 1895, and assistant professor of political economy in 1898. In further description of his experiences during his trip across the continent, he published *A Day With a Tramp, and Other Days* (1900).

WYOMING. One of the Western States of the American Union. Its area is 97,914 square miles. The population in 1908, according to Federal estimate, was 107,387.

MINERAL RESOURCES. The aggregate value of the mineral products of the State in 1907, according to figures given by the United States Geological Survey, was \$10,671,574, which was a considerable increase over the value of the production in 1906, which was \$9,063,849. In addition, there were miscellaneous products including antimony, copper, lead, lime, lithia minerals, natural gas, pearls, pottery and stone to the value of \$1,743,304. The production of coal

in Wyoming exceeded that of any preceding year. The figures for 1907 were 6,252,990 short tons, with a spot value of \$9,372,668, which is a gain over the output of 1906 of 118,996 short tons. The gain in production, however, was insignificant when compared with the gain in value. The product of 1906 was valued at \$8,013,528, while that of 1907 was \$9,732,668, a gain of over 21 per cent. The coal mines of the State gave employment in 1907 to 6,645 men, as compared with 5,934 men in 1906. The production of copper showed a remarkable increase in 1907 over 1906. In the former year, 3,026,004 pounds valued at \$605,201 were produced, as compared with 106,177 pounds, valued at \$20,492 in 1906. The production in 1905 was 2,530,531 pounds, and the falling off in 1906 was due to local causes. The other mineral products of the State are relatively unimportant. They include clay products, gold, gypsum, lime, silver, stone, and precious stones. The Director of the Mint estimated the output of gold for 1908 as probably equal to or slightly exceeding that of 1907, which was \$9,400. It was estimated that the coal production of the State in 1908 did not exceed 60 per cent. of that of 1907. This decrease resulted from financial conditions, and from an oversupply of fuel mined during the summer and fall of 1907.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in 1908, according to figures of the United States Department of Agriculture, were as follows: Corn, 84,000 bushels, valued at \$64,000 from 3,000 acres; spring wheat, 1,275,000 bushels, valued at \$1,084,000 from 50,000 acres; oats, 2,839,000 bushels, valued at \$1,420,000 from 78,000 acres; barley, 140,000 bushels, valued at \$91,000 from 4,000 acres; rye, 22,000 bushels, valued at \$16,000 from 1,000 acres; potatoes, 948,000 bushels, valued at \$628,000 from 6,000 acres; hay, 504,000 tons, valued at \$3,730,000 from 252,000 acres. The number of farm animals, Jan. 1, 1909, was as follows: Horses, 135,000; sheep, 6,591,000; cattle, 900,000; swine, 19,000. Wyoming ranks first in the number of sheep. The wool clipped in 1908 was 36,000,000 pounds valued at \$5,644,800.

EDUCATION. The compulsory education law, passed at the session of the Legislature of 1907, had a good effect on the attendance of pupils in the schools of the State. In 1907 there were in the State 26,794 pupils of school age (6 to 21 years), and in 1908 there were 28,769 pupils of school age. In 1907 there were enrolled in the schools 19,795 pupils and in 1908 21,390. There were in the State in 1907 787 teachers, and in 1908, 899. The average number of days of attendance of pupils in 1907 was 91, and in 1908 this was increased to 99. The number of women teachers as compared with men teachers is on the increase. Of the total number of 899, there were but 115 men teachers in 1908. There was a marked increase in the salaries paid to men and women in 1907. The average salaries paid to men amounted to \$74.14 and was in 1908 \$85.26. For women the average salary paid in 1907 was \$49.50 and in 1908 it was \$53.05. The average for both sexes was \$69.15, making an increase of \$7.33 in the average monthly salary in one year. The total amount expended for school purposes during the school year 1907-8 amounted to \$584,970.03.

FINANCE. A statement of the State treasurer gave the balance on hand Oct. 1, 1907, as \$243,-

506.79; the receipts for the fiscal year following were \$881,716.29, and investments repaid \$99,446.36; the expenditures were \$697,199.87 and the investments for permanent funds, \$182,448.80, leaving a balance on Sept. 30, 1908, of \$353,419.50. The bonded debt Oct. 1, 1908, was \$182,000.

CHARITIES AND CORRECTIONS. At the close of the biennium, ending Sept. 30, 1908, the population of the State institutions was as follows: Hospital for Insane, Evanston, 140; General Hospital, Rock Springs, 31; General Hospital, Sheridan, 27; Soldiers' and Sailors' Home, Buffalo, 45; and the State Penitentiary, Rawlins, 257, of whom five were United States prisoners. The State also maintains the Big Horn Hot Springs Reserve at Thermopolis. Delinquent boys and girls are sent to industrial schools at Golden and Denver, Col., and the State deaf and blind are sent to schools in neighboring States. The delinquent in 1908 numbered 11 boys and 3 girls, the deaf 12, and the blind 2. The total expenses for charities and corrections during the biennium aggregated \$349,239.33.

CONVENTIONS AND ELECTIONS. The Republican State convention on May 7 elected delegates to the national convention instructed to vote for W. H. Taft for President, and on May 14 similar action was taken by the Democrats in regard to W. J. Bryan. There was no election for State offices in 1908. In the election of Nov. 3, the Republicans carried the State for Taft by a plurality of about 5,000. The detailed vote was as follows: Taft, 20,846; Bryan, 14,918; Debs, 1,715. F. W. Mondell was reelected a member of the House of Representatives.

OTHER EVENTS. By an explosion in Mine No. 1 of the Union Pacific Coal Mine at Hanna on March 28 over sixty miners were killed. The State gained several thousand population during the year, chiefly among farmers from the Mississippi Valley and adjoining States west; who made homestead entries with a view to applying by farming methods in semi-arid districts. There was a considerable amount of railroad building in 1908.

STATE OFFICERS. Governor, B. B. Brooks; secretary of state, Wm. R. Schnitger; treasurer, Edward Gillitte; auditor, Leroy Grant; adjutant-general, P. A. Gatchell; attorney-general, W. E. Mullen; superintendent of education, A. D. Cook—all Republicans.

JUDICIARY. Supreme Court: Chief justice, Chas. N. Potter; associate justices, Cyrus L. Beard, Richard A. Scott; clerk, W. H. Kelly—all Republicans.

The State Legislature of 1909 is composed of 21 Republicans and 2 Democrats in the Senate, 45 Republicans and 5 Democrats in the House. The State representation in Congress will be found in the article UNITED STATES under the section Congress.

X-RAYS. See PHYSICS AND CANCER.

YACHTING AND MOTOR BOATING. The yachting and motor boating season of 1908, although somewhat affected by the financial depression, was nevertheless a most successful one, when the number of boats built and races run is considered. There were six ocean races, three for sailing yachts and three for power boats. These comprised two from Marblehead to Bermuda, two to Fire Island Lightship and return, the Lipton cup race to Cape May and return, and one from Marblehead to New Ro-

chelle. The Bermuda race, 675 miles, was won in Class B by H. Morss's schooner *Dervish*, and in Class C by E. J. Bliss's sloop *Venona*, the winners' time being respectively 109h. 23m. 45s. and 100h. 16m. The Bermuda race for power boats was won by J. Craig's *Alisa Craig* in 66h. 32m. 30s. The Fire Island Lightship race (93 miles) for sail boats was won by the yawl *Sakana*, owned by the Haviland brothers, in 20h. 2m. 9s. The Fire Island race for 50-foot power boats was won by J. H. Hadley's schooner, the *Alabama*, in 6h. 49m. 30s. F. Thompson's schooner, the *Shamrock*, won the Lipton cup race to Cape May and return (225 miles) in 54h. 57m. 30s. The Marblehead to New Rochelle race (270 miles) for power boats was won by S. W. Granbery's *Irene II* in 32h. 33m. The trans-Pacific race from San Pedro to Honolulu (2,500 miles) was won by the schooner *Lurline* of the South Coast Yacht Club, California, in 13d. 21h. 31m. 43s. Two international contests were held, the international dory race, held under the auspices of the Amsterdam Yacht Club, Holland, which was won by the *Tautog*, owned by G. G. Fry, of the American Yacht Club, and the international motor boat race at Huntington, L. I., won by E. J. Schroeder's *Dixie II*. *Dixie II* also won the American Power Boat Association's Gold Challenge cup, the International Championship cup, and the special mile championship. A remarkable feature of the motor boating season was the increase in speed gained. The best record up to 1908 was between 25 and 26 nautical miles an hour. This was advanced in 1908 to over 31 nautical miles an hour.

YALE UNIVERSITY. An institution of higher learning at New Haven, Conn., founded in 1701. The attendance in all departments in the year 1907-8 was 3,306, divided as follows: Graduate department, 360; academic, 1,351; Sheffield Scientific, 895; theological school, 65; law school, 294; medical school, 154; art school, 41; school of music, 87; school of forestry, 59. During the year there were two losses among the faculty from death, in the academic department, Professor Thomas D. Seymour, who died on Dec. 31, 1907, and Professor Edward Gaylord Bourne, who died on Feb. 24, 1908. Professor Seymour was Hillhouse professor of Greek, and Professor Bourne was professor of American history. Dr. Joseph Barrel was appointed professor of structural geology and Professor Max Farrand of Leland Stanford, Jr., University, was appointed professor of American history. Two members of the faculty retired during the academic year, Professor Tracy Peck of the academic department, and Professor John H. Niemeyer of the art school. The place left vacant by Professor Peck will be taken by Professor George Lincoln Hendrickson, of Chicago. A directory of living graduates was published during the year, which showed the total number of alumni now living to be 14,806. Of these 3,848 were in law; 1,432 in engineering, 1,673 in education, and 1,274 in the ministry. During the year, Leete Oliver Memorial Hall, a recitation hall for the Sheffield Scientific School, was completed, and the transfer to the university of the title to the Hillhouse property, a tract of land about 30 acres in extent, within two blocks of the present university centre, was made. Two buildings were in course of construction at the end of the year, Carnegie Swimming Hall, and Haughton Hall, a dormitory for the academic department. The total funds and

assets of the university on June 30, 1908, were \$9,640,246, and the income was \$1,163,608. Gifts received during the year, not including certain specific gifts to income, amounted to \$1,263,444. The principal items constituting these gifts were: From the Yale alumni fund, \$63,149.90; from the estate of the late Archibald Henry Blount, \$337,291.73; by bequest of the late Lura Currier, \$100,000; by bequest of the late D. Willis James, \$95,250; by bequest of the late Benjamin D. Silliman, \$50,000; by contributions to the university endowment and extension fund, \$335,665.94; by bequest of the late Charles J. Stille, \$38,032.42; by balance of the William B. Ross library fund, \$122,220.16. The university endowment and extension fund amounted on June 30, 1908, to \$2,225,999.27. The library contained 550,000 volumes. The president is Arthur T. Hadley.

YELLOW FEVER. See VITAL STATISTICS.

YOUNG, CHARLES AUGUSTUS. An American astronomer, died on Jan. 4, 1908. He was born on Dec. 15, 1834, at Hanover, N. H., a son and grandson of successive occupants of the chair of physics at Dartmouth; graduated there in 1853 and for the next two years taught Latin and Greek at Phillips Academy, Andover, meanwhile studying theology at the Seminary there. He became professor of mathematics and natural philosophy at Western Reserve in 1857, and remained there until 1862, when he joined the Eighty-fifth Regiment of Ohio Volunteers, with which he served until 1866, when he resumed his professorial work, taking the chair of natural philosophy and astronomy at Dartmouth. In 1869 he observed the solar eclipse at Burlington, Ia., and verified the gaseous composition and solar substance of the corona. With an improved solar spectroscope, which he devised, he made important observations, and in 1876 he made the first use of a grating spectroscope. In 1870, at Jerez, Spain, he discovered the "reversing layer" of the solar atmosphere, for which discovery, with others, he was awarded in 1890 the Jannsen medal of the French Academy of Sciences. In 1877 he became professor of astronomy at Princeton, where he remained until his retirement in 1905. He headed the Princeton solar eclipse expedition of 1878, and he was also in charge of the solar eclipse observations at Wadesboro, N. C., in 1900. Another of his important achievements was his experimental verification of Doppler's principle as applied to light with the result that he made an accurate measurement of the velocity of the sun's rotation. Professor Young invented an automatic spectroscope which astronomers have quite generally adopted. His publications include: *The Sun* (1882); *A General Astronomy* (1889); *Elements of Astronomy* (1890), and a *Manual of Astronomy* (1902).

YOUNG MEN'S CHRISTIAN ASSOCIATIONS. The first association was organized in London in 1844. They now exist in every continent. America, 10 countries; Europe, 24; Asia, 9; Africa, 5, Australasia, 3. Total membership, 810,892; 1,118 buildings valued at \$48,677,076; 1,370 paid general secretaries. World's committee, No. 3 Ru General Dufour, Geneva, Switzerland; R. Sarasin Warnery, chairman; Paul des Gouttes, treasurer; Charles Fermaud, Christian Philidius, general secretaries. North America: 1,939 associations; 446,032 members; 630 buildings, valued at \$39,138,411; 2,544 employed officers. Men in educational classes, 44,831; in

physical work, 187,110; in Bible classes, 88,549. By departments, 83,466 members in railroad associations; 51,999 in student associations; 9,198 in colored associations; 70,532 in boys' departments. In city associations 64,425 men in industrial occupations. Specialized work is being done for railroad men; students in college and professional, theological, preparatory and high schools; colored men in cities and colleges; reservation Indians; men and boys in country districts; enlisted men of the army and navy; industrial workers of all kinds, and immigrants. Current expenses: Local work, \$6,182,926; State and provincial work, \$418,969; internal committee—home work, \$221,843; foreign mission work, \$168,556. International employed secretaries, home field, 66; foreign mission field, 68. North American International Committee, 124 East 28th street, New York; Lucien C. Warner, chairman; F. B. Schenck, treasurer; R. C. Morse, general secretary.

YOUNG TURKS. See TURKEY; BULGARIA; BALKAN QUESTION.

YOUNG WOMEN'S CHRISTIAN ASSOCIATIONS, NATIONAL BOARD OF. Was formed in Dec., 1906, consisting of thirty members. Headquarters are at 125 East 27th street, New York. The national association which the board represents is made up of 167 city and 5 mill village associations with a membership of 115,616 and 536 student associations with a membership of 116,529. The national board has two coördinate departments for home and foreign work. The home department has sub-committees for publications, conferences and conventions, secretarial training, city and student work, and for work in manufacturing and industrial centres. The official organ is *The Association Monthly*. Nine summer conferences with an attendance of 3,440 were held in 1908; the second biennial convention will be held in St. Paul, April, 1909. A new training school for secretaries was opened in New York city, Oct., 1908. Under the direction of the world's committee at London, 10 of whom are members of the American national board, there are 13 American secretaries engaged in foreign association work: 7 in India, 1 in Japan, 4 in China, and 1 in South America. President of the national board, Miss Grace H. Dodge.

ZANZIBAR. A British protectorate on the east coast of Africa, comprising the islands of Zanzibar (987 square miles), Pemba (596 square miles), and Lamou (56 square miles). The population, estimated at 250,000, consists mainly of negroes, 20,000 East Indians, and 10,000 Arabs; the last are the dominant race. Zanzibar, the capital, has 50,000 inhabitants. The products are chiefly cloves, copra, chillies, rubber, copal, hides, and ivory. The export of copra in 1907 was 143,163 cwts., against 157,445 cwts. in 1906; but the value of the 1907 export was the highest on record. The crop of cloves, the great staple of the islands, for the season 1907-8 was an exceptionally good one, being estimated at not less than 200,000 bales. The imports in 1907 amounted to £1,232,957; the exports, to £1,070,067. The latter included cloves, £410,119; copra, £137,633; ivory, £57,502; rice and cereals, £37,929; rubber, £16,993; skins, £14,324; copal, £12,657. The trade is mainly with East Africa, British India, Great Britain, Germany, and France. The port of Zanzibar was entered

in 1907 by 388 ships of 482,465 tons (278,354 German, and 122,740 British). A light railway of 7 miles was built by an American company. It is being extended from the town of Zanzibar to the plantations in the north of the island. The present Sultan is Seyyid Ali Bin Hamud, who succeeded his father on July 18, 1902. His authority nominally extends over the coast of the British East Africa Protectorate 10 miles inland. All public expenditures must receive the consent of the British agent and consul-general—in 1908, Basil S. Cave. There is a British garrison of 400 men.

ZELLER, EDUARD. A German theologian and historian of philosophy, died on March 19, 1908. He was born at Kleinbottwar, in Württemberg, on Jan. 22, 1814, and was educated at Tübingen and afterward at Berlin, where he was influenced by Hegel. In 1840 he became *privatdocent* at Tübingen, and here began his study of the history and basis of the Christian religion, which prompted his subsequent researches in the history of Greek philosophy. He was appointed in 1847 to the chair of theology at Berne, and in 1849 to the corresponding professorship at Marburg, but opposition to his theological views caused his transfer to the chair of philosophy in the latter university. In 1862 he became professor of philosophy at Heidelberg, and in 1872 took the corresponding chair at Berlin, where he continued his active work as a teacher until 1895, when he retired. During his early career, he was one of the founders of the *Theologische Jahrbücher*, which reflected the philosophical and historical methods of David Strauss and Christian Bauer, and the Hegelian idea of development. His principal published work, *The Philosophy of the Greeks in Its Historical Development*, was produced chiefly in the years 1844 to 1852, but was subsequently much revised and enlarged, and the latest edition was printed in 1902. It has been translated into English, and other European languages, and is considered the most important text-book on its subject. Zeller's other works include *Das Theologische System Zwinglis* (1853); the important *Die Apostelgeschichte kritisch untersucht* (1854); *Vorträge und Abhandlungen* (1865); *Staat und Kirche* (1872); *David Friedrich Strauss* (1874); *Grundriss der Geschichte der griechischen Philosophie* (1883; 8th ed., 1907); and *Friedrich der Grosse als Philosoph* (1866). In his later years he abjured the Hegelian philosophy and adopted that of Kant.

ZEPPELIN, FERDINAND, COUNT VON. A German aeronaut, who made several remarkable flights in his dirigible balloon, in 1908. He was born in Constance, Baden, on July 8, 1838, studied at the Polytechnic School in Stuttgart, and then in the military school in Ludwigsburg. He became an officer in the army in 1858, and after considerable military service, in 1890 began to study airships, and in 1900, at Friedrichshafen, on Lake Constance, began his experiments with a dirigible balloon of large size and with engines of considerable power. This type of balloon was developed by him, and he was remarkably successful in the early part of the summer of 1908, until his airship was wrecked. For a description of his airship, and aerial voyages, see the article **AERONAUTICS**.

ZINC. The production of primary spelter, a crude metallic zinc derived from ore, in the United States from domestic and foreign ores

in 1908 was reported by the United States Geological Survey at 210,424 short tons, worth at the average price about \$20,000,000, as compared to 249,860 tons in 1907, 224,770 tons in 1906, and 203,849 tons in 1905. Imports of zinc ore comprised 23,500 tons of duty-free calamine (silicate ore), valued at \$220,000, and 30,500 tons of dutiable ore (carbonate and sulphide), valued at \$383,000. These imports, of which 6,500 tons were dutiable ore from Canada, the remainder being from Mexico, show a decrease of about 50 per cent. from the quantities of the corresponding ores imported in 1907, which were 81,973 tons and 28,867 tons, respectively. The exports of zinc ore show an increase, being 26,108 tons, worth \$877,745, compared to 20,352 tons in 1907. The imports of spelter show a decrease of 50 per cent. being 881 tons, worth \$85,000, compared to 1,778 tons in 1907. The exports of spelter show a marked increase, being 2,648 tons, valued at \$238,000, as against 563 tons in 1907. The exports of zinc dross were 8,680 tons, in value \$483,000, compared to 9,593 tons in 1907. Prices maintained a uniform but very gradual ascent throughout the year. The average New York price of prime western spelter for the year was 4.73 cents per pound, the extreme range in value being from 4.32 to 5.15 cents per pound, as compared with 4.254 cents (Dec.) to 6.837 cents (March) in 1907. Zinc is also used in pigments, such as zinc oxide, leaded zinc oxide, zinc lead oxide, and lithoplane, which are prepared direct from the ore. In 1908 the output of these was estimated at 65,100 tons valued at \$5,876,040, as against 85,390 tons valued at \$7,731,100 in 1907.

ZIONISM. See **JEWS**.

ZOOLOGICAL SOCIETIES. The German Zoologische Gesellschaft held its eighteenth meeting at Stuttgart, June 9 to 11. The opening address was by Professor Zschokke on "The Conditions of Mid-European Fauna During the Ice Age." The eighth international zoological congress was scheduled to meet at Gratz during the summer of 1910 under the presidency of Professor L. V. Graff. For award at the time the following prizes were announced: The Emperor Alexander III Prize for a paper on "The Role of Mechanical Phenomena in the Transformation of Animal Forms," the Emperor Nicholas II prize for a monographic study of a group of Platyhelminthes, and the Alexander Kowalevsky prize, founded by the Zoological Society of St. Petersburg, to be awarded to a candidate selected by them. Zoologists of all countries except Austria were invited to compete for the other two, the rules forbidding competition by the natives of the country in which the congress meets. The Swiss Naturforschende Gesellschaft met Aug. 30 to Sept. 2 at Glarus. The Italian zoological and anatomical society met Sept. 1 to 4 at Bormio-Bagni. The seventy-eighth annual meeting of the British Association for the Advancement of Science was held in Dublin beginning Sept. 2 under the presidency of Francis Darwin. The address before the zoology section was by S. F. Harmer. (See **ZOOLOGY**.) The American Society of Zoologists with Professor W. M. Wheeler, president of the Eastern branch, as presiding officer, met at Baltimore, Dec. 28 to 30, in conjunction with Section F of the American Association for the Advancement of Science. Professor E. B. Wilson, as vice-president of Section F, delivered the annual address, taking for

his subject, "Recent Researches on the Determination and Heredity of Sex." (See BIOLOGY.) The Naples Association for Promoting Laboratory Research by Women announced for the fourth time a prize of \$1,000 to be awarded in 1909 for the best paper on a chemical, physical or biological subject, written by a woman.

ZOOLOGY. Zoölogical research for the year 1908 seemed not to have shown any very new developments, a great deal of research having been carried on along established lines of descriptive anatomy, embryology, and in systematic work. At the same time, a great deal was done in the newer fields of experimental embryology and cytology. The discovery of a few years ago, that the egg contains different "formative materials," which are visibly distinct, and have distinct functions in forming the embryo, was followed by the discovery that these materials could, without interfering with the regular course of development, be thrown by a centrifuge into a regular stratified arrangement. The use of the centrifuge was the most recent addition to the technique of experimental embryology, and in the United States, especially by Lillie, Morgan, Conklin and their students, was used a good deal, the purpose of the experiment being an analysis of the method of working of the formative forces at work in the production of the embryo. Wilson and others have continued their studies of the chromosomes. (See YEAR BOOK for 1907, article BIOLOGY.) Other developments of zoölogical investigation along experimental lines which have continued through the year are Regeneration and Regulation, and in the study of the reactions of animals to stimuli of various sorts, where the zoologist and the psychologist apparently meet on common ground. As president of the section of zoölogy at the meeting of the British Association for the Advancement of Science, S. F. Harmer spoke especially on problems connected with the study of the Polyzoa. As bearing on Weismann's theory that the appearance of variations is produced largely through union of two individuals in sex reproduction, he shows that these reproduce by budding, but nevertheless show very great variations. The address dealt mainly with the morphology of the avicularia and vibracula, which he regards as protective structures, especially adapted for protecting the animal against encrusting organisms, like other colonies of Polyzoa. These organs vary much in different genera, and he considers it probable, though not easy to demonstrate, that the variations follow Mendel's law. Dr. G. R. Wieland calls attention to the desirability of protecting the few remaining large quadrupeds in the ocean. While for a time the whale fisheries almost entirely ceased, the application of steam and electricity, and the invention of the shot harpoon, have made them profitable again. A large part of the catch is of the females taken while suckling their young, which leads, of course, to a rapid destruction of the race. Similarly the large turtles which come ashore along the Atlantic coast to lay their eggs are killed and the eggs collected for food. Unless this practice ceases, the animals will soon be entirely exterminated. Professors Wil-

son and Hill have, at the expense of considerable time and money, succeeded in getting embryological material of Ornithorhynchus, and have published some of their results in *Philosophical Transactions*. The animal lays its eggs in deep burrows from which it is difficult to dig them, and owing to difficulty in getting adults, and the further fact that when an adult female is caught, the eggs may not be in the desired stages, collections are slow and expensive.

Rotifers are commonly cited as possessing the ability to withstand drying for an indefinite time, coming into activity again on the addition of water. From experimental evidence, Whitney decided that this is an error, and that the rotifers die as soon as the water in which they are kept becomes foul as it will before it completely dries. He thinks the error might have arisen through mistaking the winter eggs for dried adults. Woodruff as a result of a year's study of a single culture of *Paramecium*, using media as nearly as possible like that of their normal environment, observed no tendency to conjugate, and thinks that nuclear variations indicate normal rhythms rather than senescence or degeneration. From this he concluded that conjugation among the Protozoa is not as frequent or as important as it is usually supposed to be.

Parker has discussed the probable origin of the vertebrate eye, and suggests that they arose from pigment cups such as are found along the nervous system of *Amphioxus*, probably functioning there as eyes. In the transparent *Amphioxus*, these may be functional anywhere in the body, but with development of musculature along the body they became limited to the head, and even there, owing to development of the jaw, were forced to the dorsal surface. The retina of the eye is then composed of a mass of these cups, and the inverted condition of the retina is due to the position of the cups, each with pigment on the side toward the brain.

The habit of death feigning possessed by many of the lower animals was discussed by Holmes. His general conclusion was that in most cases this is a tetanic condition of the muscles of the body, amounting to a sort of hypnosis, and that in insects at least it is not dependent on the brain. In insects and spiders it appears even after the brain is removed. *Annotates Japonicæ* reported the discovery of a fresh water medusa, *Limnocoedium*, in the Yang-tse-Kiang about 1,000 miles from its mouth.

BISON RESERVE. An area not to exceed 12,800 acres of land in the Flathead Indian reservation in Montana was set aside by President Roosevelt under authority of an act of Congress as a permanent bison range, the herd of bison to be presented by the American Bison Society. The sum of \$30,000 was appropriated for the purchase of this land, and \$40,000 for the erection of necessary buildings and fencing.

An important zoölogical text book of the year is Lillie's *Embryology of the Chick*, being the first since Balfour in 1883 to give a comprehensive first hand study of chick embryology. See ORNITHOLOGY and FISHERIES.)

ZULULAND. See NATAL.

THE END
